SAFETY SWITCHES

OVERVIEW OF THE PRODUCTS

Non-contact safety switches, safety locking devices, electro-mechanical safety switches, safety command devices, mechanical bolts for safety switches

SICK
Sensor Intelligence.

BROAD PRODUCT RANGE FOR YOUR DIVERSE APPLICATIONS

Safety switches are indispensable in any application where safety is required for people and machinery. They are used for protecting movable physical guards, determining the position of dangerous movements, and the safe stop function. SICK offers not only traditional electro-mechanical safety switches and safety command devices but also a large selection of safety locking devices and non-contact safety switches. In combination with safe control systems, this enables us to provide you with tailor-made complete solutions.

CHALLENGES CALL FOR SOLUTIONS

Safely monitor hazardous access points like doors or flaps

The manipulation of safety switches on physical guards is a problem in many companies. A high level of protection against manipulation is therefore often necessary to avoid accidents. SICK offers suitable solutions for this: from the tried-and-proven RE1 and RE2 magnetic safety switches through to the flexible STR1 transponder safety switches with a high, variant-dependent coding level and performance level e.

Manipulation-proof closing of doors or flaps to protect people and processes

Is manipulation proofing the protective devices on your machines or equipment an important issue for you? Then we recommend the RFID-monitored TR110 Lock safety locking devices with performance level e.
The MLP1 magnetic safety locking device with a high offset tolerance is the ideal solution for protecting processes from unnecessary interventions.

YOUR PARTNER FOR SAFETY

SICK has a comprehensive portfolio of sensors, controllers and services and can also assist you on-site with the world's largest network of functional safety experts. In addition to solving your safety needs, SICK offers you unbeatable added value because the safety portfolio also includes a handy range of non-safety automation components.

Safely monitor the position or presence of machine parts

Sensors used for position monitoring in dynamic processes are subjected to high levels of mechanical stress as a result of frequent actuation. The IME2S and IQB2S inductive safety switches from SICK operate in a non-contact manner and are therefore especially low-wear and low-maintenance. They also have a very precise switching point.

Safely stopping machines in case of emergency or manually resetting protective devices

The ability to immediately stop a machine in absolute emergencies is essential. The easy-to-install ES11 emergency stop pushbutton offers the ideal solution for this. Why? Because it already comes with an integrated button for manually resetting protective devices. An LED also makes it easier for the machine operator to see the operating status.

ACCESS AND POSITION: NON-CONTACT SAFETY

Machines and production lines have doors and flaps that need to be safeguarded. Highly manipulation proof magnetic safety switches and transponder safety switches are optimally suited for this application.
Moving machine parts also need to be reliably monitored. Inductive safety switches detect a defined position and register it reliably.
Magnetic, inductive and transponder safety switches belong to the class of non-contact safety switches and operate in a particularly low-wear manner: a clear advantage for minimizing your costs.

Rugged functionality for a longer product life cycle

The RE1 and RE2 magnetic safety switches and the STR1 transponder safety switch guarantee optimal monitoring of doors and flaps. They offer a high tolerance to door offset.
The RE1 and RE2 are not only reliable but also low maintenance and, when combined with a suitable safety module in the controller, deliver performance level e protection.
The STR1 also offers a very intuitive diagnostic function. It provides flexible mounting options and maximum protection against manipulation.

Discover the innovative STR1 ➔ www.sick.com/STR1
Check out the reliable RE1 and RE2 ➔ www.sick.com/RE1 & www.sick.com/RE2

Quick installation for maximum machine availability

Inductive safety switches guarantee simple and reliable position and area monitoring up to performance level d. Because they are activated by metal, the safety switches do not require a separate actuator to perform this task. This makes them especially low wear in operation. They are simple and flexible to mount and, thanks to the wide range of products available, can be used for numerous safety tasks.

VERSATILE AND ABLE TO BE INTEGRATED INTO ANY SYSTEM

Different sectors, different tasks, different requirements – there are many ways of integrating sensors. Whether it be wiring sensors individually, connecting simple sensors in series, or cascading different protective devices. SICK is a reliable partner in this field and can offer a suitable solution for integrating your sensors.

Cuts costs, supports diagnostics, reliable

Flexi Loop provides a flexible solution for connecting safety switches and other safety sensors in series within a machine. Thanks to the ability to individually monitor each sensor, this series connection allows safety levels up to performance level e with no compromise in safety. Which safety level is required for your system depends on the risk assessment. We would be happy to assist you with this.

Can be used with safety controllers and soon also with safety relays from SICK

Independent of type, technology and manufacturer

Sensor and diagnostic information available up to the cloud

Plug and play wiring with M12 connectivity

1   2   3   ...   32

AN OVERVIEW OF THE MOST IMPORTANT FEATURES OF THE SAFETY SWITCHES

Safety application	Key selection criteria		Manipulation protection due to coding level of the actuator (EN ISO 14119)	Product group	Products	from page	
Interlocking movable physical guards							
Door locking	Protection of people [1]	Power to release	Low coding level	Safety locking devices	i14 Lock, i10 Lock, i110 Lock, i200 Lock	10	→
			Low/high coding level		TR10 Lock/TR110 Lock	10	
		Power to lock [2]	Low coding level		i10 Lock, i110 Lock, i200 Lock	11	
			Low/high coding level		TR10 Lock, TR110 Lock	10	
	Process protection	Power to lock	Low coding level		MLP1	10	
Door monitoring	No tolerance to door offset	Retaining force required, electromechanical volt-free contact	Low of coding	Safety switches with separate actuator	i12S, i16S, i17S, i110S	12	
	Tolerance to door offset	No retaining force required, volt-free reed contacts (low-wear)	Low coding level	Magnetic safety switches	RE1, RE2	8	
		No retaining force required, OSSDs (low-wear)	Low/high coding level	Transponder safety switches	STR1	8	
Safe position monitoring							
Monitoring of machine stop positions	Switch off when activated	Mechanical activation	No coding	Safety position switches	i10P, i10R, i110P, i110R	11	→
	Switch on when activated	Non-contact activation by metal without additional actuator		Inductive safety switches	IME2S, IQB2S	9	
					IN4000 Direct	9	
		Non-contact activation by coded actuator	Low/high coding level	Transponder safety switches	STR1	8	
Safety commands							
Emergency stop	–	Triggering of emergency stop at defined positions	–	Emergency stop pushbutton	ES11, ES21	14	→
		Triggering emergency stop throughout the entire distance	–	Rope pull switches	110RP, 150RP	15	
Resetting of the protective device	–	–	–	Reset pushbutton	ER12	14	
Manual approval for maintenance and setup mode	–	–	–	Enabling switch	E100	15	

[1] All locks for protecting people can also be used for process protection.

[2] In the event of a voltage drop, the safety locking device unlocks regardless of whether the dangerous state of the machine has ended. Use for protecting people requires correct project planning.

ACHIEVABLE PERFORMANCE LEVEL FOR THE SAFE EVALUATION UNIT AND THE SAFETY SWITCH

TR110 Lock:
- PL e for door and locking monitoring (EN ISO 13849)
- Locking force: up to 3,900 N
- Actuator with high coding level (EN ISO 14119)
- Enclosure rating: IP67, IP69K
- Power to lock or power to release variants
- Three actuation directions
- Optional escape release
- Variants with two illuminable pushbuttons

MLP1:
- 500 N magnetic locking force, 25 N retaining force
- PL e/Cat. 4 (EN ISO 13849), SIL3 (EN 61508) for door monitoring
- Offset tolerance of ± 5 mm
- IP67 enclosure rating
- Standard or integrated mounting
- Variants with two M12 plug connectors for simple cascading

i14 Lock:
- Compact plastic housing
- M20 x 1.5 cable entry
- Power to release
- interlocking monitoring
- LED interlocking status indicator
- Mechanical unlocking mechanism on three sides

SERVICES FOR MACHINES AND PLANTS: SICK LifeTime Services

Our comprehensive and versatile LifeTime Services are the perfect addition to the comprehensive range of products from SICK. The services range from product-independent consulting to traditional product services.

Consulting and design
Safe and professional

Product and system support
Reliable, fast, and on-site

Verification and optimization
Safe and regularly inspected

Upgrade and retrofits
Easy, safe, and economical

Training and education
Practical, focused, and professional

SICK AT A GLANCE

SICK is a leading manufacturer of intelligent sensors and sensor solutions for industrial applications. With more than 10,000 employees and over 50 subsidiaries and equity investments as well as numerous agencies worldwide, SICK is always close to its customers. A unique range of products and services creates the perfect basis for controlling processes securely and efficiently, protecting individuals from accidents, and preventing damage to the environment.

SICK has extensive experience in various industries and understands their processes and requirements. With intelligent sensors, SICK delivers exactly what the customers need. In application centers in Europe, Asia, and North America, system solutions are tested and optimized in accordance with customer specifications. All this makes SICK a reliable supplier and development partner.

Comprehensive services round out the offering: SICK LifeTime Services provide support throughout the machine life cycle and ensure safety and productivity.

That is "Sensor Intelligence."

Worldwide presence:

Australia, Austria, Belgium, Brazil, Canada, Chile, China, Czech Republic, Denmark, Finland, France, Germany, Great Britain, Hungary, Hong Kong, India, Israel, Italy, Japan, Malaysia, Mexico, Netherlands, New Zealand, Norway, Poland, Romania, Russia, Singapore, Slovakia, Slovenia, South Africa, South Korea, Spain, Sweden, Switzerland, Taiwan, Thailand, Turkey, United Arab Emirates, USA, Vietnam.
