P-Group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: REL	**Scaling:** PERCENT	**Expert list:** 1
Min	**Max**	**Factory setting**
- [%]	- [%]	- [%]

Description: Displays the effective flux setpoint.

The value is referred to the rated motor flux.

p1599[0...n] Flux controller excitation current difference / Flux ctr I_exc_dif

VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** -
P-Group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: ASM, PMSM, REL, RESM	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.0 [%]	100.0 [%]	3.0 [%]

Description: Sets the permissible difference between the actual excitation current and the excitation current setpoint.

The excitation current flux controller is active within this difference.

If the difference lies outside the specified limit value, then the I component of the excitation current flux controller is kept. Instead of this, for the flux controller of the field-generating current, an additional I controller is switched in (integral time according to p1592).

If the difference again lies within the bandwidth, the I component of the excitation current flux controller is re-activated and the I component of the flux controller of the field-generating current is reduced as an exponential function with respect to time. The reduction of the I component over time depends on the rotor time constant (r0384).

p1600[0...n] P flux controller P gain / P flux ctrl Kp

VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)

Can be changed: U, T	**Calculated:** CALC_MOD_CON	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** -
P-Group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: ASM, PMSM, REL, RESM	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.0	999999.0	10.0

Description: Sets the proportional gain of the P flux controller for separately excited synchronous motors (SESM).

Note: The value is automatically pre-assigned dependent on the motor when the drive system is first commissioned.

When calculating controller parameters (p0340 = 4), this value is re-calculated.

p1601[0...n] Current injection ramp time / I_inject t_ramp

VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)

Can be changed: U, T	**Calculated:** CALC_MOD_REG	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 6790
P-Group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: ASM, SESM, REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
1 [ms]	10000 [ms]	20 [ms]

Description: Synchronous-reluctance motor:

Sets the ramp-up time of the current setpoint (p1610, p1611) when switching over from closed-loop controlled to open-loop controlled operation.

Synchronous motor:

Sets the ramp-down time of the current setpoint when switching over from open-loop controlled to closed-loop controlled operation.

r1602 CO: P flux controller output / P flux ctrl outp

VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)

Can be changed: -	**Calculated:** -	**Access level:** 4
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 6726, 6727
P-Group: Closed-loop control	**Unit group:** 6_2	**Unit selection:** p0505
Not for motor type: ASM, PMSM, REL, RESM	**Scaling:** p2002	**Expert list:** 1
Min	**Max**	**Factory setting**
- [Arms]	- [Arms]	- [Arms]

Description: Displays the output of the P flux controller for separately excited synchronous motors (SESM).

p1603[0...n] Field-generating current maximum / Id max

SERVO, SERVO_AC, SERVO_I_AC

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** -
P-Group: -	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.0 [%]	100.0 [%]	0.0 [%]

Description: Sets the maximum component of the field-generating current to the permissible maximum current (r0067).

Note: If value = 0.0%:

For synchronous motors, 90 % is effective and for induction motors, 60 %.

p1604[0...n] Pulse technique current limit / Pulse current lim

VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)

Can be changed: U, T	**Calculated:** CALC_MOD_CON	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** -
P-Group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: ASM, SESM, REL, RESM	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.00 [Arms]	10000.00 [Arms]	0.00 [Arms]

Description: Sets the effective current limit within the pulse technique.

Note: The saturation characteristic of the motor defines the available operating range for the pulse technique.

This operating range can be adjusted using the current limit.

When commissioning a catalog motor, the technique is automatically selected depending on the motor type being used.

Otherwise, the rated motor current is used as pre-assigned value.

p1605[0...n] Pulse technique pattern configuration / Puls pattrn config

VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)

Can be changed: U, T	**Calculated:** CALC_MOD_CON	**Access level:** 3
Data type: Integer16	**Dyn. index:** DDS, p0180	**Func. diagram:** -

Not for motor type: ASM, SESM, REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
1	5	2

Description: Sets the applied test signal and evaluation technique for estimating the continuous rotor position.

Remark:

See p1750 to activate the test signal technique.

Value:
1: 2p_dpm
2: 4p_dppmm
3: 2p_dpm_model
4: 2p_dpm_qpm
5: 2p_apm_bpm

Dependency: Refer to: p1750

Note: When commissioning a catalog motor, the technique is automatically selected depending on the motor type being used.

r1606 CO: Pulse technique pattern actual / Puls pattern act

VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Integer16	**Dyn. index:** -	**Func. diagram:** -
P-Group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: ASM, SESM, REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	5	-

Description: Displays the currently applied test signal for estimating the continuous rotor position.

Value:
0: None
1: 2p_dpm
2: 4p_dppmm
3: 2p_dpm_model
4: 2p_dpm_qpm
5: 2p_apm_bpm

Dependency: Refer to: p1605, p1750

p1607[0...n] Pulse technique excitation / Pulse excitation

VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)

Can be changed: U, T	**Calculated:** CALC_MOD_CON	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** -
P-Group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: ASM, SESM, REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.000 [mVs]	20000.000 [mVs]	32.000 [mVs]

Description: Sets the excitation amplitude (voltage-time pulse) for the pulse technique for estimating the continuous rotor position.

For load current-dependent adaptation (p3371 ... p3373), this amplitude applies at operating point 1.

Dependency: Refer to: p1605, p1750, p3371, p3372, p3373

r1608[0...8] CO: Pulse technique response / Puls response

VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Displays, signals	**Unit group:** 6_5	**Unit selection:** p0505
Not for motor type: ASM, SESM, REL	**Scaling:** p2002	**Expert list:** 1
Min	**Max**	**Factory setting**
- [A]	- [A]	- [A]

Description: Displays the signal response components relating to the excitation of the pulse technique.

Index:
[0] = Component x
[1] = Component y
[2] = Pointer length
[3] = Component x smooth
[4] = Component y smooth
[5] = Component x
[6] = Component y
[7] = Pointer length
[8] = Pointer length

Dependency: Refer to: p1605, p1607, p1750

Note: For index [0...8]:

The reference system of components x and y depends on the actual pattern (r1606).

For fixed stator excitation, the following applies: x = alpha, y = beta

For fixed rotor excitation, the following applies: x = d, y = q

For index [3, 4]:

Displays the smoothed values (smoothing time p0045) from indices 0 and 1.

p1609[0...n] I/f operation current setpoint / I/f op I_setp

VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)

Can be changed: U, T	**Calculated:** CALC_MOD_ALL	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 6727
P-Group: Closed-loop control	**Unit group:** 6_2	**Unit selection:** p0505
Not for motor type: ASM, PMSM, REL, RESM	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.00 [Arms]	10000.00 [Arms]	0.00 [Arms]

Description: Sets the stator current setpoint for operation of a separately excited synchronous motor (SESM) in operating mode I/f (p1300 = 18).

p1610[0...n] Torque setpoint static (sensorless) / M_set static

VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)

Can be changed: U, T	**Calculated:** -	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 6700, 6721, 6722, 6726
P-Group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-200.0 [%]	200.0 [%]	50.0 [%]

Description: Sets the static torque setpoint for sensorless vector control in the low speed range.

This parameter is entered as a percentage referred to the rated motor torque (r0333).

For sensorless vector control, in the speed-controlled operating range (open loop), an absolute current is impressed. p1610 represents the maximum load that occurs at a constant setpoint speed.

Caution: For separately-excited synchronous motors (p0300 = 5), the parameter is also active for vector control with sensor and independent of the speed (see function diagram, 6726).

Notice: p1610 should always be set to at least 10 % higher than the maximum steady-state load that can occur.

Note: For p1610 = 0%, a current setpoint is calculated that corresponds to the no-load case (ASM: rated magnetizing current, RESM: no-load magnetizing current).

For p1610 = 100 %, a current setpoint is calculated that corresponds to the rated motor torque.

Negative values are converted into positive setpoints in the case of induction and permanent-magnet synchronous motors as well as closed-loop controlled reluctance motors.

p1611[0...n] Additional acceleration torque (sensorless) / M_suppl_accel

VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)

Can be changed: U, T	**Calculated:** CALC_MOD_ALL	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 6700, 6721, 6722, 6726
P-Group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.0 [%]	200.0 [%]	30.0 [%]

Description: Setting the dynamic torque setpoint for small speed ranges with sensorless vector control.

This parameter is entered as a percentage referred to the rated motor torque (r0333).

Caution: For separately-excited synchronous motors (p0300 = 5), the parameter is also active for vector control with sensor and independent of the speed during the acceleration phase (r1199.2 = 1, see function diagram, 6726).

Note: When accelerating and braking p1611 is added to p1610 and the resulting total torque is converted into an appropriate current setpoint and controlled.

For pure accelerating torques, it is always favorable to use the torque precontrol of the speed controller (p1496).

p1612[0...n] Current setpoint open-loop control, encoderless / I_setCtrEncoderl

SERVO, SERVO_AC, SERVO_I_AC

Can be changed: U, T	**Calculated:** CALC_MOD_REG	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** -
P-Group: Closed-loop control	**Unit group:** 6_2	**Unit selection:** p0505
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.00 [Arms]	10000.00 [Arms]	0.00 [Arms]

Description: Sets the current setpoint for controlled (open-loop) encoderless operation.

Note: The value is effective at speeds less than p1755 and represents a reserve for a possibly existing load torque or torque error in the moment of inertia.

p1612[0...n] Current setpoint magnetizing open-loop controlled / Id_set ctrl

VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)

Can be changed: U, T	**Calculated:** CALC_MOD_ALL	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** -
P-Group: Closed-loop control	**Unit group:** 6_2	**Unit selection:** p0505
Not for motor type: ASM, PMSM, REL, RESM	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.00 [Arms]	10000.00 [Arms]	0.00 [Arms]

Description: Sets the magnetizing current setpoint in the open-loop controlled encoderless operation.

The value is only valid during the current model orientation.

Dependency: Refer to: p1610, p1611

Note: The value is effective at speeds less than p1755 and represents a reserve for a possibly existing load torque or torque error in the moment of inertia.

r1614 EMF maximum / EMF max

VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)

Can be changed: -	**Calculated:** -	**Access level:** 4
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 6725
P-Group: Displays, signals	**Unit group:** 5_1	**Unit selection:** p0505
Not for motor type: ASM, PMSM, REL, RESM	**Scaling:** p2001	**Expert list:** 1
Min	**Max**	**Factory setting**
- [Vrms]	- [Vrms]	- [Vrms]

Description: Displays the actual maximum possible electromotive force (EMF) of the separately excited synchronous motor.

Dependency: The value is the basis for the flux setpoint.

The maximum possible EMF depends on the following factors:

- Actual DC link voltage (r0070).
- Maximum modulation depth (p1803).
- Field-generating and torque-generating current setpoint.

p1616[0...n] Current setpoint smoothing time / I_set T_smooth

VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)

Can be changed: U, T	**Calculated:** CALC_MOD_REG	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 6721, 6722, 6726
P-Group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
4 [ms]	10000 [ms]	40 [ms]

Description: Sets the smoothing time for the current/torque setpoint in the open-loop-controlled operating range in the case of sensorless vector control.

Note: This parameter is only effective in the range where current is injected for sensorless vector control.

For permanent magnet synchronous motors, the parameter is effective over the complete speed range.

For induction motors, the current setpoint is calculated from p1610 and p1611 and for separately excited synchronous motors the torque setpoint is calculated from p1610 and p1611.

r1617 CO: Torque setpoint (controlled) / M_set ctrl

VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 6726
P-Group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: ASM, PMSM, REL, RESM	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
- [Nm]	- [Nm]	- [Nm]

Description: Torque setpoint for sensorless control of the separately excited synchronous motor in the open-loop-controlled operating range (under p1755 * p1756).

r1618 Current model controller precontrol / I_mod_ctrl prectrl

VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)

Can be changed: -	**Calculated:** -	**Access level:** 4
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Closed-loop control	**Unit group:** 6_2	**Unit selection:** p0505
Not for motor type: ASM, PMSM, REL, RESM	**Scaling:** p2002	**Expert list:** 1
Min	**Max**	**Factory setting**
- [Arms]	- [Arms]	- [Arms]

Description: Displays the precontrol value of the current model controller.

It involves a magnetizing current in the d-direction.

p1619[0...n] Setpoint/actual value tracking threshold / SetAct track thrsh

VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)

Can be changed: U, T	**Calculated:** CALC_MOD_ALL	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 6727
P-Group: Closed-loop control	**Unit group:** 6_2	**Unit selection:** p0505
Not for motor type: ASM, PMSM, REL, RESM	**Scaling:** p2002	**Expert list:** 1
Min	**Max**	**Factory setting**
0.00 [Arms]	10000.00 [Arms]	0.00 [Arms]

Description: Threshold for setpoint/actual value tracking of the stator current in the q axis of the current model.

p1620[0...n] Stator current minimum / I_stator min

VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)

Can be changed: U, T	**Calculated:** CALC_MOD_ALL	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 6727
P-Group: Closed-loop control	**Unit group:** 6_2	**Unit selection:** p0505
Not for motor type: ASM, PMSM, REL, RESM	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-10000.00 [Arms]	10000.00 [Arms]	0.00 [Arms]

Description: Sets the minimum stator current for separately excited synchronous motors (SESM).

A negative value means that the field-generating stator current (d-axis) has a negative sign. The valid value is internally limited to 50% of the rated motor current (p0305).

p1621[0...n] Changeover speed inner cos phi = 1 / n_chngov cos phi=1

VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)

Can be changed: U, T	**Calculated:** CALC_MOD_ALL	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 6727
P-Group: Closed-loop control	**Unit group:** 3_1	**Unit selection:** p0505
Not for motor type: ASM, PMSM, REL, RESM	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.00 [rpm]	210000.00 [rpm]	0.00 [rpm]

Description: Sets the speed where a change is made from the inner to the outer cos phi = 1.

If the value that is entered exceeds the rated speed, then a change is made to the inner cos phi = 1 over the complete speed range.

p1622[0...n] Field-generating current setpoint smoothing time constant / Id_setp T_smth

VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 6727
P-Group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: ASM, PMSM, REL, RESM	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.1 [ms]	200.0 [ms]	20.0 [ms]

Description: Sets the smoothing time constant for the setpoint of the field-generating current components.

The current filtered in this way is included in the calculation of the cos phi.

r1623[0...1] Field-generating current setpoint (steady-state) / Id_set stationary

VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)

Can be changed: -	**Calculated:** -	**Access level:** 4
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 6723, 6726, 6727
P-Group: Displays, signals	**Unit group:** 6_2	**Unit selection:** p0505
Not for motor type: PMSM, REL, RESM	**Scaling:** p2002	**Expert list:** 1
Min	**Max**	**Factory setting**
- [Arms]	- [Arms]	- [Arms]

Description: Displays the steady-state field generating current setpoint (Id_set).

r1624 Field-generating current setpoint total / Id_setp total

VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)

Can be changed: -	**Calculated:** -	**Access level:** 4
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 6640, 6721, 6723, 6727
P-Group: Displays, signals	**Unit group:** 6_2	**Unit selection:** p0505
Not for motor type: REL	**Scaling:** p2002	**Expert list:** 1
Min	**Max**	**Factory setting**
- [Arms]	- [Arms]	- [Arms]

Description: Displays the limited field-generating current setpoint (Id_set).

This value comprises the steady-state field-generating current setpoint r1623 and a dynamic component that is only set when changes are made to the flux setpoint.

p1625[0...n] Excitation current setpoint calibration / I_exc_setp cal

VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 6727
P-Group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: ASM, PMSM, REL, RESM	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
10.0 [%]	200.0 [%]	100.0 [%]

Description: Sets the gain factor to weight the excitation current setpoint.

r1626[0...1] CO: Excitation current setpoint / I_exc_setp

VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 6727

Not for motor type: ASM, PMSM, REL, RESM	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.000	100000.000	0.000

Description: Sets the proportional gain for the current model controller.

This value is automatically pre-set using p3900 or p0340 when commissioning has been completed.

p1630[0...n] Current model controller integral time / I_mod_ctrl Tn

VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)

Can be changed: U, T	**Calculated:** CALC_MOD_CON	**Access level:** 4
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 6727
P-Group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: ASM, PMSM, REL, RESM	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.00 [ms]	10000.00 [ms]	0.00 [ms]

Description: Sets the integral time for the current model controller.

This value is automatically pre-set using p3900 or p0340 when commissioning has been completed.

r1631 Current model controller P gain effective / I_mod ctrl Kp eff

VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 6727
P-Group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: ASM, PMSM, REL, RESM	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the effective P gain of the current model controller.

r1632 Current model controller integral time effective / I_mod_ctrl Tn eff

VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 6727
P-Group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: ASM, PMSM, REL, RESM	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
- [ms]	- [ms]	- [ms]

Description: Displays the effective integral time of the current model controller.

r1633 Current model flux setpoint / I_mod flux setp

VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 6727
P-Group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: ASM, PMSM, REL, RESM	**Scaling:** PERCENT	**Expert list:** 1
Min	**Max**	**Factory setting**
- [%]	- [%]	- [%]

Description: Displays the effective flux setpoint of the current model.

The value is referred to the rated motor flux.

r1634 Current model flux actual value / I_mod flux act val

VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 6727
P-Group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: ASM, PMSM, REL, RESM	**Scaling:** PERCENT	**Expert list:** 1
Min	**Max**	**Factory setting**
- [%]	- [%]	- [%]

Description: Displays the effective flux actual value of the current model.

The value is referred to the rated motor flux.

r1635 Current model controller I component / I_mod_ctrl I comp

VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)

Can be changed: -	**Calculated:** -	**Access level:** 4
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 6727
P-Group: Closed-loop control	**Unit group:** 6_2	**Unit selection:** p0505
Not for motor type: ASM, PMSM, REL, RESM	**Scaling:** p2002	**Expert list:** 1
Min	**Max**	**Factory setting**
- [Arms]	- [Arms]	- [Arms]

Description: Displays the I component of the current model controller.

r1636 Current model controller output / I_mod_ctrl outp

VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)

Can be changed: -	**Calculated:** -	**Access level:** 4
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 6727
P-Group: Closed-loop control	**Unit group:** 6_2	**Unit selection:** p0505
Not for motor type: ASM, PMSM, REL, RESM	**Scaling:** p2002	**Expert list:** 1
Min	**Max**	**Factory setting**
- [Arms]	- [Arms]	- [Arms]

Description: Displays the output of the current model controller.

r1637 Current model magnetizing current d axis / I_mod I_mag d-ax

VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)

Can be changed: -	**Calculated:** -	**Access level:** 4
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 6727
P-Group: Closed-loop control	**Unit group:** 6_2	**Unit selection:** p0505
Not for motor type: ASM, PMSM, REL, RESM	**Scaling:** p2002	**Expert list:** 1
Min	**Max**	**Factory setting**
- [Arms]	- [Arms]	- [Arms]

Description: Displays the magnetizing current of the current model in the d-axis.

r1638 Current model magnetizing current q axis / I_mod I_mag q-ax

VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)

Can be changed: -	**Calculated:** -	**Access level:** 4
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 6727
P-Group: Closed-loop control	**Unit group:** 6_2	**Unit selection:** p0505
Not for motor type: ASM, PMSM, REL, RESM	**Scaling:** p2002	**Expert list:** 1
Min	**Max**	**Factory setting**
- [Arms]	- [Arms]	- [Arms]

Description: Displays the magnetizing current of the current model in the q-axis.

r1639 CO: Current model Isq after actual value tracking / I_mod Isq track

VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)

Can be changed: -	**Calculated:** -	**Access level:** 4
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 6727
P-Group: Closed-loop control	**Unit group:** 6_2	**Unit selection:** p0505
Not for motor type: ASM, PMSM, REL, RESM	**Scaling:** p2002	**Expert list:** 1
Min	**Max**	**Factory setting**
- [Arms]	- [Arms]	- [Arms]

Description: Displays the stator current in the q axis after the current actual value tracking.

p1640[0...n] CI: Excitation current actual value signal source / I_exc_ActVal S_src

VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32 / FloatingPoint32	**Dyn. index:** CDS, p0170	**Func. diagram:** 6727
P-Group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: ASM, PMSM, REL, RESM	**Scaling:** PERCENT	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0

Description: Sets the signal source for the excitation current actual value

r1641[0...1] Excitation current actual value / I_exc_act val

VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 6727, 8020
P-Group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: ASM, PMSM, REL, RESM	**Scaling:** PERCENT	**Expert list:** 1
Min	**Max**	**Factory setting**
- [%]	- [%]	- [%]

Description: Displays the excitation current actual value that is read in.

Index: [0] = Excitation current of the excitation equipment
[1] = Excitation current for direct excitation

Dependency: Refer to: p0390

Note: The following applies for index 0:

For direct excitation, the value is referred to p0390. For brushless excitation, the value is referred to p0690.

The following applies for index 1:

The value is referred to p0390.

p1642[0...n] Minimum excitation current / Min I_exc

VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)

Can be changed: U, T	**Calculated:** -	**Access level:** 4
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 6727
P-Group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: ASM, PMSM, REL, RESM	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.1 [%]	50.0 [%]	5.0 [%]

Description: Sets the minimum excitation current.

This means that negative excitation currents can be avoided.

p1643[0...n] Minimum excitation current closed-loop control gain factor / I_exc_min Kp

VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)

Can be changed: U, T	**Calculated:** CALC_MOD_CON	**Access level:** 4
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 6727
P-Group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: ASM, PMSM, REL, RESM	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.00	5.00	0.40

Description: Sets the gain factor for the minimum excitation current, closed-loop control.

This is active if the excitation current is below 75 % of p1642.

Dependency: Refer to: p1642

r1644 CO: Excitation current monitoring output / I_exc_monit outp

VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)

Can be changed: -	**Calculated:** -	**Access level:** 4
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 6727
P-Group: Closed-loop control	**Unit group:** 6_2	**Unit selection:** p0505
Not for motor type: ASM, PMSM, REL, RESM	**Scaling:** p2002	**Expert list:** 1
Min	**Max**	**Factory setting**
- [Arms]	- [Arms]	- [Arms]

Description: Displays the output of the excitation current monitoring for separately excited synchronous motors.

p1645[0...7] BI: Excitation feedback signals signal source / Exc FS S_src

VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32 / Binary	**Dyn. index:** -	**Func. diagram:** 6495
P-Group: Commands	**Unit group:** -	**Unit selection:** -
Not for motor type: ASM, PMSM, REL, RESM	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	[0...6] 1 [7] 0

Description: Sets the signal source for the individual feedback signals from the excitation.

Index:
[0] = Excitation ready for switching on
[1] = Excitation ready
[2] = Excitation operational
[3] = Excitation group signal fault
[4] = Excitation group signal alarm
[5] = Not used
[6] = Not used
[7] = Excitation at the voltage limit

Dependency: Refer to: r1649

p1646 Excitation monitoring time / Excit t_monit

VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)

Can be changed: T	**Calculated:** -	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 6495
P-Group: Commands	**Unit group:** -	**Unit selection:** -
Not for motor type: ASM, PMSM, REL, RESM	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
2.0 [s]	1300.0 [s]	20.0 [s]

Description: Sets the monitoring time of the excitation.

After an ON command, the feedback signal must be received within this monitoring time.

Note: After the on command for the excitation (r1648.0 = 1), its feedback signal must be available at r1649.1 within this monitoring time (BI: p1645[1]).

The same monitoring time is effective after the excitation is enabled for operation (r1648.3 = 1) up to the feedback signal "excitation operational" (r1649.2 = 1, BI: p1645[2]).

p1647 Excitation switch-off delay time / Exc t_off

VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)

Can be changed: T	**Calculated:** -	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 6495
P-Group: Commands	**Unit group:** -	**Unit selection:** -
Not for motor type: ASM, PMSM, REL, RESM	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.0 [s]	5.0 [s]	0.8 [s]

Description: Sets the switch-off delay time to shut down the excitation equipment.

Note: The delay time starts if, when switching off, r0863.0 = 0.

r1648.0 and r1648.3 are reset at the end of the delay time.

r1648.0...11 CO/BO: Excitation control word / Excitation STW

VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)

Can be changed: -	**Calculated:** -	**Access level:** 2
Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** 6495
P-Group: Displays, signals	**Unit group:** -	**Unit selection:** -
Not for motor type: ASM, PMSM, REL, RESM	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the control word for the excitation equipment.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Power up excitation	Yes	No	-
01	Excitation no OFF2	Yes	No	-
02	Excitation no OFF3	Yes	No	-
03	Excitation operation enable	Yes	No	-
07	Excitation acknowledge fault	Yes	No	-
10	Reserved	-	-	-
11	Reverse field excitation invert excitation current setpoint	Yes	No	-

Note: For bit 00:

This bit is set, dependent on r0863.0; exception, precharging via the Motor Module (see p0212).

r1649.0...11 CO/BO: Excitation status word / Excitation ZSW

VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)

Can be changed: -	**Calculated:** -	**Access level:** 2
Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** 6495
P-Group: Displays, signals	**Unit group:** -	**Unit selection:** -
Not for motor type: ASM, PMSM, REL, RESM	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Display and BICO output for the status word of the excitation equipment.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Excitation ready for switching on feedback signal	Yes	No	-
01	Excitation ready feedback signal	Yes	No	-
02	Excitation operational feedback signal	Yes	No	-
03	Excitation group signal fault	Yes	No	-
07	Excitation group signal alarm	Yes	No	-
08	Excitation at the voltage limit	Yes	No	-
11	Excitation voltage present at the power unit	Yes	No	-

Dependency: Refer to: p1645
Refer to: A49204

r1650 Current setpoint torque-generating before filter / Iq_set before filt

SERVO, VECTOR (n/M), SERVO_AC, VECTOR_AC (n/M), SERVO_I_AC, VECTOR_I_AC (n/M)

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 5710
P-Group: Closed-loop control	**Unit group:** 6_2	**Unit selection:** p0505
Not for motor type: REL	**Scaling:** p2002	**Expert list:** 1
Min	**Max**	**Factory setting**
- [Arms]	- [Arms]	- [Arms]

Description: Displays the torque generating current setpoint Iqset after the torque limits and the clock cycle interpolation is ahead of the current setpoint filters.

r1650 Current setpoint force-generating before filter / Iq_set before filt

SERVO (Lin), SERVO_AC (Lin), SERVO_I_AC (Lin)

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 5710
P-Group: Closed-loop control	**Unit group:** 6_2	**Unit selection:** p0505
Not for motor type: REL	**Scaling:** p2002	**Expert list:** 1
Min	**Max**	**Factory setting**
- [Arms]	- [Arms]	- [Arms]

Description: Displays the force generating current setpoint Iqset after the force limits and the clock cycle interpolation is ahead of the current setpoint filters.

r1651 CO: Torque setpoint function generator / M_set FG

SERVO, VECTOR (n/M), SERVO_AC, VECTOR_AC (n/M), SERVO_I_AC, VECTOR_I_AC (n/M)

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Closed-loop control	**Unit group:** 7_1	**Unit selection:** p0505
Not for motor type: REL	**Scaling:** p2003	**Expert list:** 1
Min	**Max**	**Factory setting**
- [Nm]	- [Nm]	- [Nm]

Description: Displays the torque setpoint of the function generator.

r1651 CO: Force setpoint function generator / F_set FG

SERVO (Lin), SERVO_AC (Lin), SERVO_I_AC (Lin)

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Closed-loop control	**Unit group:** 8_1	**Unit selection:** p0505
Not for motor type: REL	**Scaling:** p2003	**Expert list:** 1
Min	**Max**	**Factory setting**
- [N]	- [N]	- [N]

Description: Displays the force setpoint of the function generator.

p1653[0...n] Current setpoint torque-generating smoothing time minimum / Isq_s T_smth min

VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)

Can be changed: U, T	**Calculated:** -	**Access level:** 4
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 6710
P-Group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: PMSM, REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.1 [ms]	20.0 [ms]	0.1 [ms]

Description: Sets the minimum smoothing time constant for the setpoint of the torque-generating current components.

p1654[0...n] Curr. setpoint torque-gen. smoothing time field weakening range / Isq_s T_smth FW

VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)

Can be changed: U, T	**Calculated:** CALC_MOD_ALL	**Access level:** 4
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 6710
P-Group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: PMSM, REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.1 [ms]	50.0 [ms]	4.8 [ms]

Description: Sets the smoothing time constant for the setpoint of the torque-generating current components.

Note: The smoothing time does not become effective until the field-weakening range is reached.

p1655[0...4] CI: Current setpoint/Speed actual value filter nat. frequency tuning / I/n_setp_filt f_n

VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32 / FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 6700, 6710
P-Group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: REL	**Scaling:** PERCENT	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	1

Description: Sets the signal source for tuning the natural frequency of the current setpoint filter 1, 2 and speed actual value filter 5.

Index:
[0] = Filter 1
[1] = Filter 2
[2] = Reserved
[3] = Reserved
[4] = Filter 5

p1656[0...n] Manipulated variable filter velocity controller activation / Filt v_ctrl act

HLA

Can be changed: U, T	**Calculated:** CALC_MOD_CON	**Access level:** 3
Data type: Unsigned16	**Dyn. index:** DDS, p0180	**Func. diagram:** 4965
P-Group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0000 bin

Description: Setting for activating/deactivating the manipulated variable filter for the velocity controller.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Filter 1	Active	Inactive	-
01	Filter 2	Active	Inactive	-
02	Filter 3	Active	Inactive	-
03	Filter 4	Active	Inactive	-

Dependency: Refer to: p1657, p1658, p1659, p1660, p1661, p1662, p1663, p1664, p1665, p1666, p1699

p1656[0...n] Activates current setpoint filter / I_setp_filt act

SERVO, SERVO_AC, SERVO_I_AC

Can be changed: U, T	**Calculated:** CALC_MOD_CON	**Access level:** 3
Data type: Unsigned16	**Dyn. index:** DDS, p0180	**Func. diagram:** 5710
P-Group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0001 bin

Description: Setting for activating/deactivating the current setpoint filter.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Filter 1	Active	Inactive	-
01	Filter 2	Active	Inactive	-
02	Filter 3	Active	Inactive	-
03	Filter 4	Active	Inactive	-

Dependency: The individual current setpoint filters are parameterized as of p1657.

Note: If not all of the filters are required, then the filters should be used consecutively starting from filter 1.

p1656[0...n] Current setpoint/Speed actual value filter activation / I_setp_filt act

VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Unsigned16	**Dyn. index:** DDS, p0180	**Func. diagram:** 4715, 6710
P-Group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0000 0001 bin

Description: Setting for activating/deactivating the current setpoint filter 1, 2 and speed actual value filter 5.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Filter 1	Active	Inactive	-
01	Filter 2	Active	Inactive	-
04	Filter 5	Active	Inactive	-

Dependency: The individual current setpoint/speed actual value filters are parameterized starting at p1657.

Note: If not all of the filters are required, then the filters should be used consecutively starting from filter 1.

p1656 Signal filter activation / I_setp_filt act

A_INF (Suppl cl-loop ctrl), R_INF (Suppl cl-loop ctrl)

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** -
P-Group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0000 0000 bin

Description: Setting for activating/deactivating the 2nd order filter.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
04	Filter 5	Active	Inactive	8940

Dependency: The filter is parameterized from p1677.

p1657[0...n] Manipulated variable filter 1 velocity controller type / Filt 1 v_ctrl type

HLA

Can be changed: U, T	**Calculated:** CALC_MOD_CON	**Access level:** 3
Data type: Integer16	**Dyn. index:** DDS, p0180	**Func. diagram:** 4965
P-Group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
1	2	1

Description: Sets the type for manipulated variable filter 1 of the velocity controller

Value:
1: PT2 low pass
2: General 2nd order filter

Dependency: For p1657 = 1, the following parameters should be set:

- p1656.0, p1658, p1659

For p1657 = 2, the following parameters should be set:

- p1656.0, p1658, p1659, p1660, p1661

Refer to: p1656, p1658, p1659, p1660, p1661, p1662, p1663, p1664, p1665, p1666

Note: For a general 2nd order filter, by inserting the same natural frequency in both the numerator and in the denominator, i.e. bandstop frequency, a bandstop filter is implemented. If the numerator damping of zero is selected, the bandstop frequency is completely suppressed.

The denominator damping can be determined from the equation for the 3 dB bandwidth:

f_3dB bandwidth = 2 * D_denominator * f_bandstop frequency

p1657[0...n] Current setpoint filter 1 type / I_set_filt 1 type

SERVO, VECTOR (n/M), SERVO_AC, VECTOR_AC (n/M), SERVO_I_AC, VECTOR_I_AC (n/M)

Can be changed: U, T	**Calculated:** CALC_MOD_CON	**Access level:** 3
Data type: Integer16	**Dyn. index:** DDS, p0180	**Func. diagram:** 5710, 6710
P-Group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
1	2	1

Description: Sets the current setpoint filter 1 as low pass (PT2) or general 2nd-order filter.

Value:
1: PT2 low pass
2: General 2nd order filter

Dependency: The current setpoint filter 1 is activated via p1656.0 and parameterized via p1657 ... p1661.

Note: For a general 2nd order filter, by inserting the same natural frequency in both the numerator and in the denominator, i.e. bandstop frequency, a bandstop filter is implemented. If the numerator damping of zero is selected, the bandstop frequency is completely suppressed.

The denominator damping can be determined from the equation for the 3 dB bandwidth:

f_3dB bandwidth = 2 * D_denominator * f_bandstop frequency

P-Group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
1	2	2

Description: Sets the speed actual value filter 5 as low pass (PT2) or general 2nd-order filter.

Value:
1: PT2 low pass
2: General 2nd order filter

Dependency: The speed actual value filter is activated via p1656.4 and parameterized via p1677 ... p1681.

Note: For a general 2nd order filter, by inserting the same natural frequency in both the numerator and in the denominator, i.e. bandstop frequency, a bandstop filter is implemented. If the numerator damping of zero is selected, the bandstop frequency is completely suppressed.

The denominator damping can be determined from the equation for the 3 dB bandwidth:

f_3dB bandwidth = 2 * D_denominator * f_bandstop frequency

Not for motor type: ASM, PMSM, REL, RESM	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.0 [%]	200.0 [%]	100.0 [%]

Description: Sets the scaling of the EMF precontrol for the Isq current controller.

p1705[0...n] Flux setpoint/actual value tracking threshold / Flux track thresh

VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)

Can be changed: U, T	**Calculated:** -	**Access level:** 4
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 6714, 6726
P-Group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: ASM, PMSM, REL, RESM	**Scaling:** PERCENT	**Expert list:** 1
Min	**Max**	**Factory setting**
0.0 [%]	100.0 [%]	100.0 [%]

Description: Threshold for the setpoint - actual value tracking of the EMF precontrol of the Isq current controller.

p1710[0...n] Current controller adaptation in-line axis starting point Kp / Id_adapt pt Kp

VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)

Can be changed: C2(3), U, T	**Calculated:** CALC_MOD_REG	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Func. diagram:** -
P-Group: Motor	**Unit group:** -	**Unit selection:** -
Not for motor type: ASM, PMSM, SESM, REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.00 [Arms]	6000.00 [Arms]	0.00 [Arms]

Description: Sets the starting point of the current-dependent current controller adaptation where the current controller gain p1720 is effective.

Dependency: Refer to: p1720

Notice: When selecting a catalog motor (p0301), this parameter is automatically pre-assigned and is write protected. Information in p0300 should be carefully observed when removing write protection.

Note: For p1712 = 100 % or p1402.2 = 0, the current controller adaptation is disabled and p1720 is effective over the entire range.

p1711[0...n] Current ctrl adaptation in-line axis starting point Kp adapted / Id_adap pt Kp adap

VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)

Can be changed: C2(3), U, T	**Calculated:** CALC_MOD_REG	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Func. diagram:** -
P-Group: Motor	**Unit group:** -	**Unit selection:** -

Min	**Max**	**Factory setting**
0.00 [Arms]	6000.00 [Arms]	0.00 [Arms]

Description: Sets the starting point of the current-dependent current controller adaptation where the adapted current controller gain p1720 x p1712 is effective.

Dependency: Refer to: p1710, p1712, p1720

Notice: When selecting a catalog motor (p0301), this parameter is automatically pre-assigned and is write protected. Information in p0300 should be carefully observed when removing write protection.

Note: For p1712 = 100 % or p1402.2 = 0, the current controller adaptation is disabled and p1720 is effective over the entire range.

p1712[0...n] Current controller adaptation in-line axis p gain adaptation / Id_adapt Kp adapt

VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)

Can be changed: C2(3), U, T	**Calculated:** CALC_MOD_REG	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Func. diagram:** -
P-Group: Motor	**Unit group:** -	**Unit selection:** -
Not for motor type: ASM, PMSM, SESM, REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.00 [%]	1000.00 [%]	100.00 [%]

Description: Sets the factor for the current controller P gain in the adaptation range (d-current > p1711).

The value is referred to p1720.

Dependency: Refer to: p1710, p1711, p1720

Notice: When selecting a catalog motor (p0301), this parameter is automatically pre-assigned and is write protected. Information in p0300 should be carefully observed when removing write protection.

Note: For p1712 = 100 % or p1402.2 = 0, the current controller adaptation is disabled and p1720 is effective over the entire range.

p1715[0...n] Force controller P gain / F_ctrl Kp

HLA

Can be changed: U, T	**Calculated:** CALC_MOD_CON	**Access level:** 3

Min	**Max**	**Factory setting**
0.000 [V/A]	100000.000 [V/A]	0.000 [V/A]

Description: Sets the proportional gain of the current controller for the lower adaptation current range.

This value is automatically pre-set using p3900 or p0340 when commissioning has been completed.

Dependency: Refer to: p0391, p0392, p0393

Note: For p0393 = 100 %, the current controller adaptation is disabled and p1715 is effective over the entire range.

p1715[0...n] Current controller P gain / I_ctrl Kp

VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)

Can be changed: U, T	**Calculated:** CALC_MOD_CON	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 6700, 6714, 7017
P-Group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.000	100000.000	0.000

Description: Sets the proportional gain of the current controller for the lower adaptation current range.

This value is automatically pre-set using p3900 or p0340 when commissioning has been completed.

Dependency: Refer to: p0391, p0392, p0393

Note: For p0393 = 100 %, the current controller adaptation is disabled and p1715 is effective over the entire range.

p1716[0...n] Force controller P gain weakening / F_ctrl Kp red

HLA

Can be changed: U, T	**Calculated:** CALC_MOD_CON	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 4970
P-Group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.1 [%]	100.0 [%]	40.0 [%]

Description: Sets the weakening of the proportional gain for large actuating signals for the force controller.

The setting value specifies what percentage of a P component of 10 V is weakened.

Dependency: Refer to: p1715

p1717[0...n]	Force controller integral time / F_ctrl Tn		
HLA	**Can be changed:** U, T	**Calculated:** CALC_MOD_CON	**Access level:** 3

Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.0 [%]	120.0 [%]	100.0 [%]

Description: Sets the factor for the velocity precontrol of the force controller.

p1720[0...n] Current controller d axis p gain / Id_ctrl Kp

VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)

Can be changed: U, T	**Calculated:** CALC_MOD_CON	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** -
P-Group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: ASM, PMSM, SESM, REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.000	100000.000	0.000

Description: Sets the proportional gain of the d-current controller for the lower adaptation current range.
This value is automatically pre-set using p3900 or p0340 when commissioning has been completed.

p1721[0...n] Precontrol filter activation / Prectrl_filt act

HLA

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Unsigned16	**Dyn. index:** DDS, p0180	**Func. diagram:** 4970
P-Group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0000 bin

Description: Setting for activating/deactivating the precontrol filter.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Activate filter	Yes	No	-

Dependency: Refer to: p1699, p1722, r1724, p1724, r1725, p1725, p1726, p1727

p1722[0...n] Precontrol filter type / Prectrl_filt type

HLA

Can be changed: U, T	**Calculated:** CALC_MOD_CON	**Access level:** 3
Data type: Integer16	**Dyn. index:** DDS, p0180	**Func. diagram:** 4970
P-Group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
1	2	1

Description: Sets the precontrol filter as low pass (PT2) or as general 2nd-order filter.

Value:
1: PT2 low pass
2: General 2nd order filter

Dependency: The precontrol filter is activated via p1721.0 and parameterized via p1721 ... p1726.

Note: For an extended general 2nd order filter, by inserting the same natural frequency in both the numerator and in the denominator, i.e. bandstop frequency, a bandstop filter is implemented. If the numerator damping of zero is selected, the bandstop frequency is completely suppressed.

The denominator damping can be determined from the equation for the 3 dB bandwidth:

f_3dB bandwidth = 2 * D_denominator * f_bandstop frequency

p1722[0...n] Current controller d axis integral time / I_ctrl d-axis Tn

VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)

Can be changed: U, T	**Calculated:** CALC_MOD_CON	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** -
P-Group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: ASM, PMSM, SESM, REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.00 [ms]	1000.00 [ms]	2.00 [ms]

Description: Sets the integral time of the d-current controller.

r1723 CO: Isd controller output / Isd_ctrl outp

VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)

Can be changed: -	**Calculated:** -	**Access level:** 4

P-Group: Closed-loop control	**Unit group:** 5_1	**Unit selection:** p0505
Not for motor type: REL	**Scaling:** p2001	**Expert list:** 1
Min	**Max**	**Factory setting**
- [Vrms]	- [Vrms]	- [Vrms]

Description: Displays the integral component of the Isd current controller (flux-generating current, PI controller).

p1725[0...n] Precontrol filter denominator damping / Prectrl_filt D_den

HLA			
	Can be changed: U, T	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 4970
	P-Group: Closed-loop control	**Unit group:** -	**Unit selection:** -
	Not for motor type: REL	**Scaling:** p2001	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0.001	10.000	0.700

Description: Sets the denominator damping for the precontrol filter (PT2, general filter).

Dependency: The precontrol filter is activated via p1721.0 and parameterized via p1722 ... p1727.

Refer to: p1721

r1725 Isd controller integral component limit / Isd_ctrl I_limit

VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)			
	Can be changed: -	**Calculated:** -	**Access level:** 4
	Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 6714
	P-Group: Closed-loop control	**Unit group:** 5_1	**Unit selection:** p0505
	Not for motor type: REL	**Scaling:** p2001	**Expert list:** 1
	Min	**Max**	**Factory setting**
	- [Vrms]	- [Vrms]	- [Vrms]

Description: Displays the limit value for the integral component of the Isd current controller.

p1726[0...n] Precontrol filter numerator natural frequency / Prectr_filt fn_num

HLA			
	Can be changed: U, T	**Calculated:** CALC_MOD_ALL	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 4970
	P-Group: Closed-loop control	**Unit group:** -	**Unit selection:** -
	Not for motor type: REL	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0.5 [Hz]	16000.0 [Hz]	1999.0 [Hz]

Description: Sets the numerator natural frequency for the precontrol filter (general filter).

Dependency: Refer to: p1721

Note: The precontrol filter is activated via p1721.0 and parameterized via p1722 ... p1727.

p1726[0...n] Quadrature arm decoupling scaling / Transv_decpl scal

VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)			
	Can be changed: U, T	**Calculated:** CALC_MOD_ALL	**Access level:** 4
	Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 6714
	P-Group: Closed-loop control	**Unit group:** -	**Unit selection:** -
	Not for motor type: REL	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0.0 [%]	200.0 [%]	75.0 [%]

Description: Sets the scaling of the quadrature arm decoupling

Note: This parameter is ineffective for sensorless vector control. In this case, p1727 is always used. If p1726 is set to 0, then the quadrature de-coupling is deactivated. The integral component of the Isd current controller remains effective in the complete speed control range.

For the closed-loop control of synchronous motors, this parameter is used to scale the current controller de-coupling.

p1727[0...n] Precontrol filter numerator damping / Prectrl_filt D_num

HLA			
	Can be changed: U, T	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 4970
	P-Group: Closed-loop control	**Unit group:** -	**Unit selection:** -
	Not for motor type: REL	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0.000	10.000	0.700

Description: Sets the numerator damping for precontrol filter.

Dependency: The precontrol filter is activated via p1721.0 and parameterized via p1722 ... p1727.

p1727[0...n] Quadrature arm decoupling at voltage limit scaling / TrnsvDecplVmaxScal

VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)

Can be changed: U, T	**Calculated:** -	**Access level:** 4
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 6714
P-Group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.0 [%]	200.0 [%]	50.0 [%]

Description: Sets the scaling of quadrature arm decoupling when the voltage limit is reached.

r1728 De-coupling voltage in-line axis / U_dir-axis_decoupl

VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 6714
P-Group: Closed-loop control	**Unit group:** 5_1	**Unit selection:** p0505
Not for motor type: REL	**Scaling:** p2001	**Expert list:** 1
Min	**Max**	**Factory setting**
- [Vrms]	- [Vrms]	- [Vrms]

Description: Displays the actual output of the quadrature channel de-coupling for the d axis.

r1729 De-coupling voltage quadrature axis / U_quad_decoupl

VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 6714
P-Group: Closed-loop control	**Unit group:** 5_1	**Unit selection:** p0505
Not for motor type: REL	**Scaling:** p2001	**Expert list:** 1
Min	**Max**	**Factory setting**
- [Vrms]	- [Vrms]	- [Vrms]

Description: Displays the actual output of the quadrature channel de-coupling for the q axis.

p1730[0...n] Isd controller integral component shutdown threshold / Isd ctrl Tn shutd

VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)

Can be changed: U, T	**Calculated:** CALC_MOD_CON	**Access level:** 4
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** -
P-Group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: PMSM, SESM, REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
30 [%]	150 [%]	30 [%]

Description: Sets the speed threshold for deactivating the integral component of the Isd controller.

The d current controller is only effective as P controller for speeds greater than the threshold value. Instead of the integral component, the quadrature arm decoupling is effective.

Warning: For settings above 80%, the d current controller is active up to the field weakening limit. When operated at the voltage limit, this can result in an unstable behavior. In order to avoid this, the dynamic voltage reserve p1574 should be increased.

Note: The parameter value is referred to the synchronous rated motor speed.

p1731[0...n] Isd controller combination current time component / Isd ctr I_combi T1

VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)

Can be changed: U, T	**Calculated:** CALC_MOD_CON	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** -
P-Group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: PMSM, SESM, REL, RESM	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.00 [ms]	10000.00 [ms]	0.00 [ms]

Description: Sets the time constant to calculate the d current DC component difference (combination current) to add to the d current controller actual value.

Note: It is not added for p1731 = 0.

r1732 CO: Direct-axis voltage setpoint / Direct U set

Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.0 [%]	200.0 [%]	10.0 [%]

Description: Sets the component of the current drop as a result of eddy currents for the dynamic current controller precontrol.

p1735[0...n] Isq current controller prectrl eddy current comp time constant / Isq_ctr_prectr T

SERVO, SERVO_AC, SERVO_I_AC

Can be changed: U, T	**Calculated:** -	**Access level:** 4
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** -
P-Group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.00 [ms]	5.00 [ms]	0.75 [ms]

Description: Sets the time constant for eddy current compensation for dynamic current controller precontrol.

p1740[0...n] Gain resonance damping for encoderless closed-loop control / Gain res_damp

VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)

Can be changed: U, T	**Calculated:** CALC_MOD_CON	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** -
P-Group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.000	10.000	0.025

Description: Defines the gain of the controller for resonance damping for operation with sensorless vector control in the range that current is injected.

p1744[0...n] Motor model speed threshold stall detection / MotMod n_thr stall

VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)

Can be changed: U, T	**Calculated:** CALC_MOD_REG	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** -
P-Group: Closed-loop control	**Unit group:** 3_1	**Unit selection:** p0505
Not for motor type: SESM, REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.00 [rpm]	210000.00 [rpm]	100.00 [rpm]

Description: Sets the speed threshold value to detect a stalled motor.

If the adaptation controller output exceeds the parameterized speed difference, then in status word r1408.11 is set = 1.

Dependency: If a stalled drive is detected (r1408.11 = 1), fault F07902 is output after the delay time set in p2178.

Refer to: p2178

Note: Speed monitoring is only effective in operation with a speed encoder (refer to p1300).
Stalling is also identified if steps/jumps occur in the speed signal, which exceed the value in p0492.

p1745[0...n] Motor model error threshold stall detection / MotMod ThreshStall

VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)

Can be changed: U, T	**Calculated:** CALC_MOD_REG	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** -
P-Group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.0 [%]	1000.0 [%]	5.0 [%]

Description: Sets the fault threshold in order to detect a motor that has stalled.
If the error signal (r1746) exceeds the parameterized error threshold, then status signal r1408.12 is set to 1.

Dependency: If a stalled drive is detected (r1408.12 = 1), fault F07902 is output after the delay time set in p2178.
Refer to: p2178

Note: Monitoring is only effective in the low-speed range (below p1755 * (100% - p1756)).

0.0 [%]	99.0 [%]	50.0 [%]

Description: Separately excited synchronous motor:

Sets the upper speed for the transition "n_set -> n_act" in sensorless operation.

This value is entered as a percentage of p1755.

Induction motor without speed encoder:

Depending on the machine data, the drive has calculated a minimum value of the operating frequency for rugged operation.

If the minimum value is greater than the lower changeover limit parameterized with p1755 * (1 - 2 * p1756), then the difference is displayed using p1749 * p1755. The parameter value cannot be changed.

Dependency: Refer to: p1748, p1752, p1755, p1756

-	-	0000 0000 0000 0000 bin

Description: Sets the configuration for the motor model.

Bit 0 = 1: Forces open-loop speed-controlled starting (ASM).

Bit 1 = 1: Forces the system to pass through frequency zero, open-loop-controlled (ASM).

Bit 2 = 1: Drive remains in full closed-loop control mode, even at zero frequency (ASM).

Bit 3 = 1: Motor model evaluates the saturation characteristic (ASM).

Bit 4 = 1: Time-controlled change between current and observer models (ASM).

Bit 5 = 1: Test signal injection to estimate the continuous rotor position (RESM, PMSM).

Bit 6 = 1: If the motor is blocked, sensorless vector control remains speed-controlled (ASM).

For a stalled (blocked) synchronous motor (PMSM), the sensorless vector control remains open-loop speed controlled.

Bit 7 = 1: Use rugged switchover limits to switchover the model between open-loop and closed-loop controlled operation (ASM).

Bit 8 = 1: Open-loop speed controlled operation independent of the speed setpoint (except for OFF3) (ASM).

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Controlled start	Yes	No	-
01	Controlled through 0 Hz	Yes	No	-
02	Closed-loop ctrl oper. down to zero freq. for passive loads	Yes	No	-
03	Motor model Lh_pre = f(PsiEst)	Yes	No	-
04	Model changeover	Time controlled	Freq. controlled	-
05	Closed-loop controlled operation down to f = 0 Hz w/ test signal	Yes	No	-
06	Closed-/open-loop controlled when motor is blocked	Yes	No	-
07	Use rugged changeover limits	Yes	No	-
08	Closed-loop controlled until wait time p1758 has expired	Yes	No	-

Caution: Do not use bit 6 = 1 if the motor can be slowly reversed by the load at the torque limit. Long delay times due to blocking (p2177 > p1758) can cause the motor to stall. In this case you should deactivate the function or use closed-loop control throughout the speed range (note the information re bit 2 = 1).

Note: Bit 0 ... 3 only have influence for sensorless vector control, bit 4 only for vector control with encoder. Bit 2 is pre-assigned depending on p0500.

For bit 2 = 1:

The sensorless vector control is effective down to zero frequency. A change is not made into the open-loop speed controlled mode.

This operating mode is possible for passive loads. These include applications where the load itself does not generate any active torque and therefore only acts reactively to the drive torque of the induction motor.

If bit 2 = 1, then bit 3 is automatically set to 1. Manual de-selection is possible and may be sensible if the saturation characteristic (p1960) was not measured for third-party motors. Generally, for standard SIEMENS motors, the already pre-assigned (default value) saturation characteristic is adequate.

When the bit is set, the selection of bits 0 and 1 is ignored.

For bit 2 = 0:

If the model feedback is deactivated (p1784 = 0), with bit 2 = 0, then bit 3 is also automatically set to 0.

For bit 5 = 1:

The selection of the test signal injection is only relevant for synchronous reluctance motors (RESM) and permanent magnet synchronous motors (PMSM).

In the pulse enable, changing bit 5 is always rejected.

When p1750.5 is selected, initially p1810.3 is set, and then a system power up is requested via F1040 to configure the power unit component in the oversampling mode.

When deactivating p1750.5, p1810.3 remains unchanged. Therefore, to undo the configuration of the power unit components from the oversampling mode

(after manually deselecting p1750 bit 5), then initially p1810 bit 3 must be manually deleted and then a manual warm restart initiated.

As an alternative to a warm restart: save the parameters and carry out a POWER ON (switch-off/switch-on).

When the function "safety without encoder" (p9306/p9506) is activated, this setting is not permissible and results in monitoring errors.

For bit 6 = 1:

The following applies for sensorless vector control of induction motors:

For a blocked motor (see p2175, p2177) the time condition in p1758 is bypassed and a change is not made into open-loop controlled operation.

The following applies for sensorless vector control of synchronous motors:

For a blocked motor (see p2175, p2177), the speed ramp-function generator is held in open-loop speed controlled operation, and a switchover is not made into closed-loop controlled operation.

For bit 7 = 1:

The following applies for sensorless vector control of induction motors:

If the changeover limits are parameterized too low (p1755, p1756), then they are automatically increased to rugged values by the absolute amount p1749 * p1755.

The effective time condition for changing over into open-controlled operation is obtained from the minimum of p1758 and 0.5 * r0384.

Activation can make sense for applications that demand a high torque at low frequencies and therefore low speed gradients.

Adequate parameterization must be ensured (p1610, p1611).

For bit 8 = 1: no influence on the functionality of bits 0, 1, 2

The following applies for sensorless vector control of induction motors:

Changeover into open-loop speed controlled operation is no longer dependent on the speed setpoint (except for OFF3), but instead is essentially dependent on time condition p1758. As a consequence, a drive can be started or reversed in closed-loop speed controlled operation with setpoints from an external control system, if these briefly lie in the open-loop speed control range.

r1751 Motor model status / MotMod status

VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: SESM, REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the status of the motor model.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Controlled operation	Active	Inactive	6721
01	Set ramp-function generator	Active	Inactive	-
02	Stop RsLh adaptation	Yes	No	-
03	Feedback	Active	Inactive	-
04	Encoder operation	Active	Inactive	-
05	Holding angle	Yes	No	-
06	Acceleration criterion	Active	Inactive	-
07	Set angular integrator PMSM	Yes	No	-
08	Stop Kt adaptation PMSM	Yes	No	-
09	PolID active PMSM encoderless	Yes	No	-
10	I injection PMSM	Yes	No	-
11	Speed controller output cannot be set to zero	Yes	No	-
12	Rs adapt waits	Yes	No	-
13	Motor operation	Yes	No	-
14	Stator frequency sign	Positive	Negative	-
15	Torque sign	Motor mode	Regenerative mode	-
16	Pulse injection active PMSM	Yes	No	-
17	Operation with rugged model feedback	Enabled	Inhibited	-
18	Operation of the current model with current feedback	Enabled	Inhibited	-
19	Current feedback in the current model	Active	Inactive	-
20	Rugged increase of the changeover limits	Active	Inactive	-
21	Motor blocked (RFG stop) PMSM	No	Yes	-

Note: PMSM: permanent-magnet synchronous motor

For bit 17:

Displays the enabled status of the rugged model feedback (p1784).

The feedback is used to increase the parameter ruggedness of the motor model and is effective in the operating range of the two-component closed loop current control.

For bit 18:

Displays the status when enabling the differential current feedback in the current model for operation with encoder.

The function is automatically enabled with p1784 > 0 or p1731 > 0.

The feedback is used for a rugged change between the current model and complete machine model with active rugged model feedback and combination current.

For bit 19:

Displays the currently active stator circuit feedback in current model operation.

For bit 20:

Displays the currently effective increase of the changeover limits by the value p1749 * p1755.

For bit 21:

For a blocked synchronous motor, the speed ramp-function generator is held in the open-loop speed controlled operating range if the torque setpoint reaches the torque limit and the speed is less than the threshold value in p2175.

Not for motor type: REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.00 [rpm]	210000.00 [rpm]	210000.00 [rpm]

Description: Sets the speed to change over the motor model for operation with encoder.

Dependency: In U/f characteristic mode the parameter is of no significance.

Using the friction characteristic for operation with encoder:

When changing the motor model changeover speed p1752, the points along the friction characteristic should be recalculated (p0340 = 5) and the friction characteristic recorded again (p3845). For slight changes, only the associated friction characteristic points must be recorded (see p3844).

Refer to: p1756

p1753[0...n] Motor model changeover speed hysteresis operation with encoder / MotMod n_chgovHysE

VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)

Can be changed: U, T	**Calculated:** CALC_MOD_REG	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** -
P-Group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.0 [%]	90.0 [%]	0.0 [%]

Description: Sets the hysteresis for the changeover speed of the motor model for operation with speed encoder.

Dependency: Refer to: p1752

Note: The value refers to p1752.

In the case of separately excited synchronous motors, the lower hysteresis value is calculated with p1752 * p1753; in the case of all other types of motor, p1752 * (1 - p1753) is used.

p1754[0...n] Flux angle difference smoothing time / Angle diff T_smth

VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 6733
P-Group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: ASM, REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.1 [ms]	10000.0 [ms]	5.0 [ms]

Description: Sets the smoothing time constant to filter the main flux angle difference from the voltage and current models.

The filtered value is included in the calculation of the total flux angle.

PMSM:

Sets the smoothing time constant to display the angular difference between the motor model an encoder.

Note: In the case of a separately excited synchronous motor (SESM) and sensorless vector control, the parameter must be set to the minimum value to improve motor model changeover.

PMSM: permanent-magnet synchronous motor

SESM: separately excited synchronous motor

p1755[0...n] Motor model changeover speed encoderless operation / MotMod n_chgSnsorl

SERVO, SERVO_AC, SERVO_I_AC

Can be changed: U, T	**Calculated:** CALC_MOD_REG	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** -
P-Group: Closed-loop control	**Unit group:** 3_1	**Unit selection:** p0505

Not for motor type: REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.0 [%]	90.0 [%]	5.0 [%]

Description: Sets the hysteresis for the changeover speed/velocity of the motor model.

Dependency: Refer to: p1752, p1755

Note: The value is entered relative to p1404, p1752 or p1755.

p1756 Motor model changeover speed hysteresis encoderless operation / MotMod n_chgov hys

VECTOR, VECTOR_AC, VECTOR_I_AC

Can be changed: U, T	**Calculated:** CALC_MOD_REG	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 6730, 6731, 6732, 6733
P-Group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.0 [%]	95.0 [%]	50.0 [%]

Description: Sets the hysteresis for the changeover speed of the motor model for encoderless operation.

In the case of separately excited synchronous motors, the lower hysteresis value is calculated with p1756 * p1755; in the case of all other types of motor, p1755 * (1 - p1756) is used.

Dependency: In U/f characteristic mode the parameter is of no significance.

Refer to: p1755

Note: The parameter value refers to p1755.

In the case of separately excited synchronous motors, the lower hysteresis value is calculated with p1755 * p1756; in the case of all other types of motor, p1755 * (1 - p1756) is used.

p1757[0...n] Motor model w/o enc. op./cl.-loop controlled stab. controller Kp / MotMod w/o enc Kp

VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)

Can be changed: U, T	**Calculated:** CALC_MOD_CON	**Access level:** 4
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** -
P-Group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: SESM, REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.01	10.00	0.70

Description: Sets the gain of the transient response controller when the motor model changes over from open-loop controlled operation to closed-loop controlled operation.

Note: Only for ASM and PSM in encoderless operation:
The settling range starts at 0.5 * p1755 * p1756.
For ASM, it ends at p1755 * p1756, or for p1755, if p1759 is at the maximum value.
For PSM it always ends at p1755 * p1756.

p1758[0...n] Motor model changeover delay time closed/open-loop control / MotMod t cl_op

VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** -
P-Group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: PMSM, SESM, REL, RESM	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
100 [ms]	10000 [ms]	1000 [ms]

Description: Sets the minimum time for falling below the changeover speed when changing from closed-loop controlled operation to open-loop controlled operation.

Dependency: The wait time has no significance if the setpoint speed before the ramp-function generator lies in the open-loop speed controlled operating range. In this case, the change is made without any delay.
Refer to: p1755, p1756

Note: If p1758 is changed, commissioning must be selected in order to validate the value for the blocking monitoring.

p1759[0...n] Motor model changeover delay time open/closed-loop control / MotMod t op_cl

VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)

Can be changed: U, T	**Calculated:** CALC_MOD_LIM_REF	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** -
P-Group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: PMSM, SESM, REL, RESM	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0 [ms]	2000 [ms]	0 [ms]

Description: Sets the minimum time for a transition from open-loop controlled to closed-loop controlled operation after the lower changeover speed p1755 * (1 - p1756 / 100 %) has been exceeded.

Dependency: Refer to: p1755, p1756

Note: With p1759 = 2000 ms, the delay time becomes ineffective and the model changeover is determined by the output frequency only (changeover for p1755).

p1760[0...n] Motor model with encoder speed adaptation Kp / MotMod wE n_ada Kp

P-Group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the internal status signals of the motor model:

Index 0: Changeover ramp between current and voltage models

Index 1: Changeover ramp for model feedback (only encoderless induction motors)

Index 2: Changeover ramp for zero frequency range (only encoderless induction motors)

Index 3: Transition ramp actual speed from speed setpoint to model value (SESM without encoder)

Index 4: Speed controller enable (SESM without encoder)

Index 5: Transition ramp between current and voltage models (SESM without encoder)

Index 6: Transition ramp for EMF deviation at PLL input (PMSM without encoder)

Index:
[0] = Changeover ramp motor model
[1] = Changeover ramp model tracking
[2] = Changeover ramp zero frequency encoderless ASM
[3] = Changeover ramp actual speed SESM without encoder
[4] = Enable speed controller SESM without encoder
[5] = Changeover ramp motor model SESM without encoder
[6] = Changeover ramp motor model PMSM without encoder

Note: Indices 3 through 5 are only relevant in the case of encoderless control of separately excited synchronous motors.

r1778 Motor model flux angle difference / MotMod ang diff

SERVO, SERVO_AC, SERVO_I_AC

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: REL	**Scaling:** p2005	**Expert list:** 1
Min	**Max**	**Factory setting**
- [°]	- [°]	- [°]

Description: Induction motor (ASM):

Displays the difference between the motor model flux angle and the transformation angle.

Permanent-magnet synchronous motor (PMSM):

Displays the angular difference between motor model and encoder.

Dependency: A setting for smoothing the display can be made using p1754.

Notice: The display only makes sense for corrected actual value inversion, encoder pulse number and pole pair number.

Example:

Moving in encoderless operation at a speed not equal to zero and without load.

--> Check the sign of r0061 and r0063. If the sign is not equal, then change p0410.0.

--> Check the stationary value of r0061 and r0063. If the value is not equal, change the encoder pulse number (p0408) or pole pair number (p0314).

r1778 Motor model flux angle difference / MotMod ang diff

VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)

Not for motor type: REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0000 0000 0010 0000 bin

Description: Sets the configuration for the adaptation circuit of the motor model.

Induction motor (ASM): Rs, Rr (only for operation with encoder), Lh and offset compensation.

Permanent-magnet synchronous motor (PMSM): kT

Bit field:

Bit	Signal name	1 signal	0 signal	FP
03	Select motor model PMSM kT adaptation	Yes	No	-
05	Reserved	Yes	No	-
07	Reserved	Yes	No	-
08	Compensation voltage emulation error in the drive converter	Yes	No	-
09	kT(iq) characteristic active	Yes	No	-

Caution: For the PMSM kT adaptation (p1780.3) as well as the compensation of the voltage emulation error (p1780.8) and for the kT(iq) characteristic (p1780.9), the function module "Extended torque control" (r0108.1) should be activated.

Note: ASM: Induction motor

PMSM: permanent-magnet synchronous motor

p1780[0...n] Motor/converter model adaptation configuration / MotMod adapt conf

SERVO (Ext M_ctrl), SERVO_AC (Ext M_ctrl), SERVO_I_AC (Ext M_ctrl)

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Unsigned16	**Dyn. index:** DDS, p0180	**Func. diagram:** -
P-Group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0000 0001 0010 1000 bin

Description: Sets the configuration for the adaptation circuit of the motor model.

Induction motor (ASM): Rs, Rr (only for operation with encoder), Lh and offset compensation.

Permanent-magnet synchronous motor (PMSM): kT

Bit field:

Bit	Signal name	1 signal	0 signal	FP
03	Select motor model PMSM kT adaptation	Yes	No	-
05	Reserved	Yes	No	-
07	Reserved	Yes	No	-
08	Compensation voltage emulation error in the drive converter	Yes	No	-
09	kT(iq) characteristic active	Yes	No	-

Caution: For the PMSM kT adaptation (p1780.3) as well as the compensation of the voltage emulation error (p1780.8) and for the kT(iq) characteristic (p1780.9), the function module "Extended torque control" (r0108.1) should be activated.

Note: ASM: Induction motor

PMSM: permanent-magnet synchronous motor

The kT adaptation is only active at a speed greater than the changeover speed with encoder (p1752).

The kT adaptation and the kT characteristic can be simultaneously selected.

For kT adaptation (p1780.3 = 1):

- the kT adaptation is only active at a speed greater than the changeover speed with encoder (p1752).

- beforehand, an identification of the voltage emulation error must be started (p1909.14 = 1).

- if the electrical configuration (e.g. Motor Module, cable routing) or the pulse frequency (p1800) changes, then a new identification run must be carried out.

- To identify the voltage emulation error the Motor Module should still be warm.

- the motor temperature (r0035) should not change significantly (i.e. it should not be identified immediately after a load duty cycle).

For kT(iq) characteristic (p1780.9 = 1):

- for the kT(iq) characteristic kT(iq) = kT + kT3 * iq^2 + kT5 * iq^4 + kT7 * iq^6, the parameters must first be identified (p1959.6 = 1, kT: p0316, kT3: p0646, kT5: p0647, kT7: p0647).

p1780[0...n] Motor model adaptation configuration / MotMod adapt conf

VECTOR, VECTOR_AC, VECTOR_I_AC

Can be changed: U, T	**Calculated:** CALC_MOD_CON	**Access level:** 3
Data type: Unsigned16	**Dyn. index:** DDS, p0180	**Func. diagram:** -
P-Group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0000 0000 0111 1100 bin

Description: Sets the configuration for the adaptation circuit of the motor model.

Induction motor (ASM): Rs, Rr (only for operation with encoder), Lh and offset compensation.

Permanent-magnet synchronous motor (PMSM): kT

Bit field:

Bit	Signal name	1 signal	0 signal	FP
01	Select motor model ASM Rs adaptation	Yes	No	-
02	Select motor model ASM Lh adaptation	Yes	No	-
03	Select motor model PMSM kT adaptation	Yes	No	-
04	Select motor model offset adaptation	Yes	No	-
05	Select ASM Rr adaptation (only with encoder)	Yes	No	-
06	Select pole position identification PMSM encoderless	Yes	No	-
07	Select T(valve) with Rs adaptation	Yes	No	-

08	Deselect prelim. meas. of inductance for pole position ident.	Yes	No	-
10	Filter time combination current like current ctrl integral time	Yes	No	-
11	Fast flying restart with voltage model for induction motor	Yes	No	-
12	Start PMSM sensorless with last angle	Yes	No	-
13	Fast pulsed pole position identification	Yes	No	-
14	Delay of the precontrol speed to the motor model	Yes	No	-
15	RESM Q flux model linear	Yes	No	-

Dependency: In U/f characteristic operating mode, only bit 7 and bit 11 are relevant.

For active motor model feedback (see p1784), the Lh adaptation is internally deactivated automatically.

When the power units are connected in parallel with separate, offset motor winding systems (p7003 = 2), then the compensation of the valve interlocking times should be implemented as Rs adaptation (bit 7 = 1).

Caution: For bit 11:

The selection is not enabled for dv/dt filters (see p0230).

Notice: It is only permissible to change bit 11 if the drive is switched off.

When selecting bit 11, also for U/f characteristic operation, a standstill measurement must have been performed to set the necessary current controller for a fast flying restart.

Note: ASM: Induction motor

PMSM: permanent-magnet synchronous motor

When selecting the compensation of the valve interlocking via Rs (bit 7), the compensation in the gating unit is deactivated and is instead taken into account in the motor model.

In order that the correction values of the Rs, Lh and kT adaptation (selected using bit 0 ... bit 2) are correctly accepted when changing over the drive data set, a dedicated motor number must be entered into p0826 for each different motor.

Bit 11 has no influence on flying restart with speed encoder. Depending on the motor, the fast flying restart is suitable for speeds of maximum 1.5x to 4x the rated motor speed.

For bit 12 (only for synchronous motors and bit 6 = 1):

The pole position identification is only carried out after power on and after the motor has coasted down. The switch-off speed p1226 should be as low as possible. If the power unit is switched off when the motor is stationary, then the next time that the power unit is switched on, the old angle is used as starting value. The precondition applies that while the power unit is switched off the motor does not rotate.

The duration of the pole position identification is shortened using bit 13. As a consequence, the pole wheel angle error can be slightly greater.

p1784[0...n] Motor model feedback scaling / MotMod fdbk scal

VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)

Can be changed: U, T	**Calculated:** CALC_MOD_CON	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** -
P-Group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: PMSM, SESM, REL, RESM	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.0 [%]	1000.0 [%]	0.0 [%]

Description: Sets the scaling for model fault feedback.

Note: Feeding back the measured model fault to the model states increases the control stability and makes the motor model rugged against parameter errors.

When feedback is selected (p1784 > 0), Lh adaptation is not effective.

p1785[0...n] Motor model Lh adaptation Kp / MotMod Lh Kp

	-	-	0000 bin

Description: Setting for activating/deactivating the manipulated variable filter.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Activate filter	Yes	No	-

Dependency: The manipulated variable filter is parameterized from p1801 and higher.

Refer to: p1699, r1801, p1801, p1802, p1803, p1804, p1805

p1800[0...n] Pulse frequency setpoint / Pulse freq setp

SERVO, SERVO_AC, SERVO_I_AC	**Can be changed:** U, T	**Calculated:** CALC_MOD_ALL	**Access level:** 2
	Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 8021
	P-Group: Modulation	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	1.000 [kHz]	32.000 [kHz]	4.000 [kHz]

Description: Sets the pulse frequency for the converter.

This parameter is pre-set to the rated converter value when the drive is first commissioned.

Dependency: The pulse frequency can, depending on the current controller sampling time (p0115[0]) assume the following values:

a) p1800 = 1000 / (p0115[0] * n) with n = 2, 3, 4, 5

b) p1800 = 1000 * n / p0115[0] with n = 1, 2, 3, 4, ...

Example:

p0115[0] = 125 µs -> p1800 = 1.6, 2, 2.6, 4 kHz (from equation a)

p0115[0] = 125 µs -> p1800 = 8, 16 kHz (from equation b)

Possible setting values can be taken from r0114 (if p0009 = p0010 = 0).

Refer to: r0110, r0111, p0112, p0113, r0114, p0115, r0193, p0230, p1817

Note: The maximum possible pulse frequency is also determined by the power unit being used.

When the pulse frequency is increased, depending on the particular power unit, the maximum output current can be reduced (derating, refer to r0067).

If p1800 is changed while commissioning (p0009, p0010 > 0), then it is possible that the old value will no longer be able to be set. The reason for this is that the dynamic limits of p1800 have been changed by a parameter that was set when the drive was commissioned (e.g. p1082).

For encoderless operation (p1404 = 0 or p1300 = 20), the following conditions apply:

p1800 = 1 / (n * p0115[0]) with n = 2, 3, 4

or

p1800 >= n / p0115[0], n = 1, 2, ...

For motors with a low power rating (< 300 W) we recommend that p1800 is set acc. to the second condition.

Although, pulse frequencies p1800 = 1/ (n * p0115[0]) with n = 3 or 4 are possible, for p0115[0] > 62.5 µs, they result in unsteady closed-loop control and should be avoided.

For motors with a low leakage inductance, it is not permissible to set the pulse frequency to an excessively low value.

p1800[0...n]	Pulse frequency setpoint / Pulse freq setp		
VECTOR, VECTOR_AC, VECTOR_I_AC	**Can be changed:** U, T	**Calculated:** -	**Access level:** 2
	Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 8021
	P-Group: Modulation	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	1.000 [kHz]	16.000 [kHz]	4.000 [kHz]

Description: Sets the pulse frequency for the converter.

This parameter is pre-set to the rated converter value when the drive is first commissioned.

Dependency: The pulse frequency can, depending on the current controller sampling time (p0115[0]) assume the following values:

p1800 = 1000 / (p0115[0] * 2)

or

p1800 = n * 1000 / p0115[0] with n = 1, 2, 3, ...

Example:

p0115[0] = 250 µs --> p1800 = 2, 4, 8, 12, 16 kHz

Possible setting values can be taken from r0114 (if p0009 = p0010 = 0).

Minimum pulse frequency: p1800 >= 12 * p1082 * r0313 / 60

If p0092 = 1 the sampling times p0115 and the pulse frequency p1800 are checked every time the parameters are downloaded, and reset to the initial values if necessary. This check can be deactivated by setting p0092 = 0 (making this setting does not influence isochronous PROFIBUS operation).

The pulse frequency cannot be changed when motor data identification is active (p1910).

If the pulse frequency is set asynchronously to the current controller sampling time (p1810.12), the following limit applies:

p1800 <= 1000 * 2 / p0115[0]

If wobbulation is selected (p1810.2), the pulse frequency can only be changed as part of pulse enabling to values with the following ratio:

a) p1800 <= 1000 / p0115[0] for p1811 > 0 %

b) p1800 <= 1000 * 2 / p0115[0] for p 1811 = 0 %

When the pulses are inhibited

p1800 > 1000 / p0115[0] -> p1811 = 0

p1800 > 1000 * 2 / p0115[0] -> 1810.2 = 0 and p1811 = 0

(applicable for all indices)

Refer to: r0110, r0111, p0112, p0113, r0114, p0115, r0193, p0230, p1817

Notice: The pulse frequency p1800 can also be asynchronously set to the current controller sampling time (0.05 kHz increment). To do this, p1810.12 must be set to 1 (secondary condition, see p1810).

Effects:

- switching over the gating unit (p1810.2).
- activating the current actual value correction (p1840.0).
- minimum pulse frequency 1000 * 0.5 / p0115[0].
- maximum pulse frequency 1000 * 2 / p0115[0].
- fluctuating deadtimes and dynamic performance in the current control loop.
- increased level of current ripple in the current display.

Note: The maximum possible pulse frequency is also determined by the power unit being used.

When the pulse frequency is increased, depending on the particular power unit, the maximum output current can be reduced (derating, refer to r0067).

When using output reactors and dv/dt filters (see p0230), the following restrictions apply:

- maximum 4 kHz
- maximum double rated pulse frequency (2.5 or 4 kHz)
- maximum rated pulse frequency for chassis converters with set property bit r0193.14

When using a sine-wave filter as output filter (p0230 = 3), then the pulse frequency cannot be set below the minimum value required for the filter.

For an external sine-wave filter (p0230 = 4), then the minimum pulse frequency is calculated as follows:

f_puls_min = 1.6 / (2 * Pi * root (p0233 * p0234 * p0235))

- p0233 in H
- p0234 in F

In this case, the pulse frequency must be a multiple of the inverse value of the current controller sampling time (p0115[0]).

If a sine-wave filter is parameterized as output filter (p0230 = 3), then the pulse frequency cannot be changed below the minimum value required for the filter.

If p1800 is changed while commissioning (p0009, p0010 > 0), then it is possible that the old value will no longer be able to be set. The reason for this is that the dynamic limits of p1800 have been changed by a parameter that was set when the drive was commissioned (e.g. p1082).

p1800 Pulse frequency / Pulse frequency

A_INF, R_INF	**Can be changed:** U, T	**Calculated:** -	**Access level:** 4
	Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 8021
	P-Group: Modulation	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	1.000 [kHz]	16.000 [kHz]	8.000 [kHz]

Description: Sets the pulse frequency for the converter.

This parameter is pre-set to the rated converter value when the drive is first commissioned.

Dependency: The switching frequency can only be changed so that it remains an integer multiple of the current controller sampling rate (p0115[0]). For p1810.12 = 1, pulse frequency p1800 can also be asynchronously set to the current controller sampling time (increment width, 0.05 kHz).

The minimum pulse frequency is always half the value of the current controller sampling rate (current controller frequency). Further, whether a setting value is actually permissible also depends on the line filter being used (p0220).

Danger: An incorrectly set line filter (p0220) - and a consequentially incorrect setting of the pulse frequency (p1800), which does not match the actually connected line filter (Active Interface Module, AIM) can result in significant damage to the line filter and the converter. Further, this represents a fire hazard.

Notice: The following should be noted for an asynchronous pulse frequency (p1810.12 = 1):

- fluctuating deadtimes and dynamic performance in the current control loop.
- increased level of current ripple in the current display.

Note: The Power Unit being used defines the maximum possible pulse frequency.

p1801[0...n] Manipulated variable filter type / ManVarFilt type

HLA	**Can be changed:** U, T	**Calculated:** -	**Access level:** 3
	Data type: Integer16	**Dyn. index:** DDS, p0180	**Func. diagram:** 4966
	P-Group: Closed-loop control	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	1	2	1

Description: Sets the manipulated variable filter as low pass (PT2) or as extended general 2nd order filter.

Value:
1: PT2 low pass
2: General 2nd order filter

Dependency: The manipulated variable filter is activated via p1800.0 and parameterized via p1801 ... p1805.

Refer to: p1800

Note: For an extended general 2nd order filter, by inserting the same natural frequency in both the numerator and in the denominator, i.e. bandstop frequency, a bandstop filter is implemented. If the numerator damping of zero is selected, the bandstop frequency is completely suppressed.

The denominator damping can be determined from the equation for the 3 dB bandwidth:

f_3dB bandwidth = 2 * D_denominator * f_bandstop frequency

r1801 Actual pulse frequency / Pulse freq act

SERVO, SERVO_AC, SERVO_I_AC

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Displays, signals	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** p2000	**Expert list:** 1
Min	**Max**	**Factory setting**
- [kHz]	- [kHz]	- [kHz]

Description: Display and connector output for the actual converter switching frequency.

Note: The selected pulse frequency (p1800) may be reduced if the drive converter has an overload condition (p0290).

The value can be displayed up to 12 current controller sampling times later than when it is actually effective, because it is not transferred in every current controller sampling time.

r1801[0...1] CO: Pulse frequency / Pulse frequency

VECTOR, VECTOR_AC, VECTOR_I_AC

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Displays, signals	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** p2000	**Expert list:** 1
Min	**Max**	**Factory setting**
- [kHz]	- [kHz]	- [kHz]

Description: Display and connector output for the actual converter switching frequency.

Index:
[0] = Actual
[1] = Modulator minimum value

Note: The selected pulse frequency (p1800) may be reduced if the drive converter has an overload condition (p0290).

The following applies for vector drives (p0107):

The pulse frequency can also be reduced when changing over the modulator to an optimized pulse pattern. This is used to avoid overcontrol.

In the case of chassis power units, two-thirds of the setpoint pulse frequency is displayed in the FLB modulation range.

r1801 Actual pulse frequency / Pulse freq act

A_INF, S_INF, R_INF

Can be changed: -	**Calculated:** -	**Access level:** 4
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Displays, signals	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** p2000	**Expert list:** 1
Min	**Max**	**Factory setting**
- [kHz]	- [kHz]	- [kHz]

Description: Display and connector output for the actual converter switching frequency.

When pulse frequency wobbulation is active (p1810), then the center switching frequency is displayed.

Notice: The displayed frequency value is not valid in the SmartMode.

Note: The displayed frequency always corresponds to the inverted duration of the switching period, which is decisive for selecting a suitable line filter (p0220).

The displayed frequency value is therefore not dependent on whether flattop modulation or space vector modulation is selected (p1810, p3410).

p1802[0...n] Manipulated variable filter denominator natural frequency / ManVarFilt fn_den

HLA	**Can be changed:** U, T	**Calculated:** CALC_MOD_CON	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 4966
	P-Group: Closed-loop control	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0.5 [Hz]	16000.0 [Hz]	1999.0 [Hz]

Description: Sets the denominator natural frequency for manipulated variable filter (PT2, general filter).

Dependency: The manipulated variable filter is activated via p1800.0 and parameterized via p1801 ... p1805.

Refer to: p1800

p1802[0...n] Modulator mode / Modulator mode

VECTOR, VECTOR_AC, VECTOR_I_AC	**Can be changed:** T	**Calculated:** CALC_MOD_LIM_REF	**Access level:** 3
	Data type: Integer16	**Dyn. index:** DDS, p0180	**Func. diagram:** -
	P-Group: Modulation	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0	19	0

Description: Sets the modulator mode.

Value:
0: Automatic changeover SVM/FLB
1: Flat top modulation (FLB)
2: Space vector modulation (SVM)
3: SVM without overcontrol
4: SVM/FLB without overcontrol
5: SVM with pulse frequency reduction
6: SVM/FLB with pulse frequency reduction
7: No edge modulation up to 100 Hz
8: No edge modulation up to 60 Hz
9: Edge modulation
19: Optimized pulse pattern

Dependency: If a sine-wave filter is parameterized as output filter (p0230 = 3, 4), or if the power unit firmware is not able to calculate edge modulation (r0192.0 = 0), then only space vector modulation without overcontrol can be set as modulation type (p1802 = 3).

For permanent-magnet synchronous motors and chassis power units, the following applies:

Edge modulation or optimized pulse pattern can only be used, if p1810 bit 2 = 1 is set.

Refer to: r0192, p0230, p7003

Notice: If the pulse patterns are enabled with overmodulation option (p1802 < 3) or edge modulation (p1802 > 6), then the current actual value correction is automatically activated (p1840.0 = 0).

Note: When modulation modes are enabled that could lead to overmodulation (p1802 = 0, 1, 2, 5, 6), the modulation depth must be limited using p1803 (default p1803 < 100 %). The higher the overmodulation, the greater the current ripple and torque ripple.

When changing p1802[x], the values for all of the other existing indices are also changed.

p1802 = 7, 8 should be used if the drive is operated below 100 Hz or 60 Hz, and it is necessary to avoid changing over to edge modulation. Above these output frequencies, the modulation depth remains limited so that there the full output voltage of the edge modulation is not reached.

The setting p1802 = 19 is only released for chassis power units and SIMOTICS FD motors.

p1802[0...n] Modulator mode / Modulator mode

VECTOR (F3E), VECTOR_AC (F3E), VECTOR_I_AC (F3E)

Can be changed: T	**Calculated:** CALC_MOD_LIM_REF	**Access level:** 3
Data type: Integer16	**Dyn. index:** DDS, p0180	**Func. diagram:** -
P-Group: Modulation	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	4	4

Description: Sets the modulator mode.

Value:
0: Automatic changeover SVM/FLB
2: Space vector modulation (SVM)
3: SVM without overcontrol
4: SVM/FLB without overcontrol

Dependency: If a sine-wave filter is parameterized as output filter (p0230 = 3, 4), then only space vector modulation without overcontrol can be selected as modulation type (p1802 = 3).

Refer to: r0192, p0230, p7003

Note: When modulation modes are enabled that could lead to overmodulation (p1802 = 0, 2), the modulation depth must be limited using p1803 (default p1803 < 100 %). The higher the overmodulation, the greater the current ripple and torque ripple.

When changing p1802[x], the values for all of the other existing indices are also changed.

p1803[0...n] Manipulated variable filter denominator damping / ManVar_filt D_den

HLA

p1810 Modulator configuration / Modulator config

SERVO, SERVO_AC, SERVO_I_AC

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** -
P-Group: Modulation	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0000 0000 0000 0000 bin

Description: Sets the configuration for the modulator.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
01	DC link voltage compensation in the power unit.	Yes	No	-
11	Current controller dynamics higher	Yes	No	-

Note: For bit 11:

Prerequisite:

- firmware version 4.4 or higher for the Control Unit and power unit.
- booksize or S120 Combi power unit (r0192.27 = 1).
- current controller sampling time p0115[0} >= 62.5 µs.
- for a Double Motor Module the two drive controls must be operated with the same current controller sampling time (p0115[0]). Otherwise, the higher current controller dynamics can only be activated on the drive with the longer sampling time.
- it is not permissible that the "safety without encoder" is activated (p9306/p9506).

The following changes are necessary after changing bit 11:

- computing dead time (p0118 = 20.5 µs for bit 11 = 1, p0118 = 0 µs for bit 11 = 0).
- controller gains (p1715, p1460).
- with p0340 = 4 computing dead time and controller gains can be automatically pre-assigned. It may be necessary to still optimize the speed controller.

Before commissioning for the first time (p3925.0 = 0 for all data sets) this parameter is automatically pre-assigned to the optimum value.

p1810 Modulator configuration / Modulator config

VECTOR, VECTOR_AC, VECTOR_I_AC

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** -
P-Group: Modulation	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0000 0000 0000 0010 bin

Description: Sets the configuration for the modulator.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Avg value filter for V_lim (only for Vdc_comp in modulator)	Yes	No	-
01	DC link voltage compensation in the current control	Yes	No	-
02	Wobbulation activated	Yes	No	-
03	Current measurement oversampling selected	Yes	No	-
08	Pulse frequency reduction (speed dependent) stage 1	Yes	No	-
09	Pulse frequency reduction (speed dependent) stage 2	Yes	No	-
10	Activate pulse-locking/pulse-dropping function	Pulse-Dropping	Pulse-Locking	-
12	Pulse freq. can be asynchronously set to curr. ctrl clock cycle	Yes	No	-
13	Pulse freq. reduction before optimized pulse patterns for 500 µs	Yes	No	-
14	Deactivate maximum angular difference adaptation	Yes	No	-
15	Increase overmodulation range	Yes	No	-

Dependency: If bit 2 is set from 1 to 0, p1811 = 0 is set.

Notice: Bit 1 = 0 can only be set when the pulses are inhibited and for r0192.14 = 1.

Bit 2 can only be set to 1 subject to the following prerequisites:

- Pulse inhibit
- r0192.16 = 1
- p1800 < 2 x 1000/p0115[0]

Bit 12 can only be changed subject to the following prerequisites:

- preconditions, the same as bit 2 = 1
- p1810.3 = 0

For fast current changes, bit 15 = 1 together with p1802 = 0, 2 and p1803 > 106 % result in a significant increase in the torque ripple. As a consequence, increasing the modulation limit must be checked on an application for application basis.

Note: For bit 00 = 0:

Voltage limitation from the minimum of the DC link voltage (lower ripple in the output current, reduced output voltage).

For bit 00 = 1:

Voltage limitation from averaged DC link voltage (higher output voltage with increased ripple in the output current).

The selection is only valid if the DC link compensation is not performed in the Control Unit (bit 1 = 0).

For bit 01 = 0:

DC link voltage compensation in the modulator.

For bit 01 = 1:

DC link voltage compensation in the current control.

For bit 02 = 0:

A gating unit that does not permit wobbulation is used.

Edge modulation is not possible for a parallel connection with a single-winding system (p7003 = 0).

Bit 02 cannot be set to 0 if bit 12 = 1.

For bit 02 = 1:

A gating unit that permits wobbulation is used.

For a wobbulation amplitude p1811 = 0, the maximum possible pulse frequency in p1800 = 2 x 1000 / p0115[0].

For a wobbulation amplitude p1811 > 0, the maximum possible pulse frequency in p1800 = 1000 / p0115[0].

If optimized pulse patterns has been activated (p1802 > 6), then a parameter save is required and switch off and switch on again. This is displayed using a message (F01040).

For bit 03 = 1:

The actual current value sensing and the determination of the valve ON times takes place with a double current controller clock cycle and phase offset.

The activation is only possible with r0192.23 = 1 and p1810.12 = 0 - and takes effect the next time the system is powered up.

For bit 08 = 1:

Above the frequency threshold r1836[0], the pulse frequency is switched to the value in p1800. Below r1836[0] (minus the hysteresis), the pulse frequency is reduced to the next possible pulse frequency (see r0114).

For bit 09 = 1:

Above the frequency threshold r1836[1], the pulse frequency is increased to the next possible value. Below r1836[1] (minus the hysteresis), the pulse frequency is reduced to the next possible pulse frequency.

If bit 8 is set to 0, bit 9 is automatically reset.

For bit 10 = 0:

Pulse-locking function activated.

For bit 10 = 1:

Pulse-dropping function activated.

For bit 12 = 0:

The pulse frequency p1800 can also be synchronously set to the current controller clock cycle (see r0114).

Bit 12 can only be set from 1 to 0 if the pulse frequency p1800 is set synchronously to the current controller clock cycle. In this case, the gating unit is not switched over.

For bit 12 = 1:

The pulse frequency p1800 can also be asynchronously set to the current controller clock cycle. In this case, the effects should be observed (see p1800).

If bit 12 is set to 1, then the gating unit is automatically switched over (p1810.2 = 1). If this is not possible (see above), then bit 12 cannot be set to 1.

Bit 12 cannot be set to 1, if p1810.3 = 1 is set.

For bit 15 = 1:

For p1802 = 0, 2 and p1803 > 106 %, dynamically, a modulation depth of more than 106 % is permitted. When p1803 is increased, the dynamic modulation depth reserve p1574 should be increased so that the maximum output voltage r0071 approximately remains the same. For U/f control, the overcontrol in p1381 can be separately reduced.

p1810 Modulator configuration / Modulator config

VECTOR (F3E), VECTOR_AC (F3E), VECTOR_I_AC (F3E)

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** -
P-Group: Modulation	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0000 0000 0000 0000 bin

Description: Sets the configuration for the modulator.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Avg value filter for V_lim (only for Vdc_comp in modulator)	Yes	No	-
01	DC link voltage compensation in the current control	Yes	No	-
08	Pulse frequency reduction (speed dependent) stage 1	Yes	No	-
09	Pulse frequency reduction (speed dependent) stage 2	Yes	No	-

Notice: Bit 1 = 0 can only be set when the pulses are inhibited and for r0192.14 = 1.

Note: For bit 00 = 0:

Voltage limitation from the minimum of the DC link voltage (lower ripple in the output current, reduced output voltage).

For bit 00 = 1:

Voltage limitation from averaged DC link voltage (higher output voltage with increased ripple in the output current).

The selection is only valid if the DC link compensation is not performed in the Control Unit (bit 1 = 0).

For bit 01 = 0:

DC link voltage compensation in the modulator.

For bit 01 = 1:

DC link voltage compensation in the current control.

For bit 08 = 1:

Above the frequency threshold r1836[0], the pulse frequency is switched to the value in p1800. Below r1836[0] (minus the hysteresis), the pulse frequency is reduced to the next possible pulse frequency (see r0114).

For bit 09 = 1:

Above the frequency threshold r1836[1], the pulse frequency is increased to the next possible value. Below r1836[1] (minus the hysteresis), the pulse frequency is reduced to the next possible pulse frequency.

If bit 8 is set to 0, bit 9 is automatically reset.

p1810 Modulator configuration / Modulator config

A_INF, S_INF, R_INF

Can be changed: U, T	**Calculated:** -	**Access level:** 4
Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** -
P-Group: Modulation	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	1000 0100 0001 0000 bin

Description: Sets the configuration for the modulator.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
02	Activate wobbulation in the power unit	Yes	No	-
04	Disable wobbulation amplitude	Yes	No	-
05	Activate extended current limitation control	Yes	No	-
06	Activate isochronous current limitation	Yes	No	-
07	Activate voltage impression with dynamic current limits	Yes	No	-
10	Activate pulse-locking/pulse-dropping function	Pulse-Dropping	Pulse-Locking	-
12	Pulse freq. can be asynchronously set to curr. ctrl clock cycle	Yes	No	-

13	Compute software gating unit on Control Unit	Yes	No	-
14	Activate optimized pulse pattern	Yes	No	-
15	Activate flat-top modulation	Yes	No	-

Dependency: The modulator configuration is overwritten when the power unit (p0201) or the line filter type (p0220) is changed.

It is possible that special settings required for the modulator must be newly set.

Notice: For bit 02 = 1:

The wobble function influences the quality of the current control (grid droop operation with p5401 = 1 is not influenced). This is the reason that the risk of faults due to overcurrent increases for applications with the highest dynamic response in the overload range,

For booksize drive units, the following additionally applies:

This function involves additional computing time. It may be necessary to reduce the number of DO objects computed on the same Control Unit, or longer sampling times must be used (observe the messages). For example, a clock setting p0115[0] = 125 µs is not possible.

For bit 13 = 1:

This function involves additional computing time. It may be necessary to reduce the number of DO objects computed on the same Control Unit, or longer sampling times must be used (observe the messages).

Note: For bit 02, 05, 14, 15:

The setting can only be changed when the pulses are inhibited.

For bit 02 = 0:

A gating unit that does not permit wobbulation is used.

For bit 02 = 1 (only permissible for r0192.16 = 1):

A gating unit that permits wobbulation is used.

The frequency range of the wobbulation function is set using p1811.

The Smart Mode (p3400.0 = 1) is not permissible - and results in F6050.

For bit 04 = 0 (only valid for bit 2 = 1):

The pulse frequency wobbulation amplitude (p1811) is enabled.

For bit 04 = 1 (only valid for bit 2 = 1):

The pulse frequency wobbulation amplitude (p1811) is disabled.

For bit 05 = 1 (only permissible for r0192.19 = 1):

Reserved.

For bit 06 (only valid for bit 05 = 1):

Reserved.

For bit 07 (only valid for bit 05 = 1):

Reserved.

For bit 10 = 0:

The pulse-locking function is activated.

For bit 10 = 1:

The pulse-dropping function is activated.

For bit 12:

Reserved.

For bit 13 = 0:

The gating unit is separately calculated in each power unit.

For bit 13 = 1 (only permissible for r0192.26 = 1):

The gating unit is calculated in the Control Unit.

The Smart Mode (p3400.0 = 1) is not permissible - and results in F6050.

For bit 14:

Reserved.

For bit 15 = 0:

To deactivate flat-top control mode, p3400.1 also needs to be set to 0.

For bit 15 = 1:

Flat-top control mode is active regardless of the setting for p3400.1.

p1811[0...n] Pulse frequency wobbulation amplitude / Puls wobb ampl

VECTOR, VECTOR_AC, VECTOR_I_AC

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** -
P-Group: Modulation	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0 [%]	20 [%]	0 [%]

Description: Sets the amplitude of the statistical wobbulation signal.

This signal is used to vary the pulse frequency to create a more pleasant sound.

Note: p1811 > 0 is possible, if the following applies:

- configuration: p1810.2 = 1 (wobbulation activated)
- pulse frequency: p1800 <= 1000 / p0115[0]
- output filter, filter type: p0230 < 3 (no sine-wave filter)

p1811 Pulse frequency wobbulation amplitude / Puls wobb ampl

A_INF, S_INF, R_INF

Can be changed: T	**Calculated:** -	**Access level:** 4
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Modulation	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0 [%]	20 [%]	0 [%]

Description: Sets the amplitude of the statistical wobbulation signal.

This signal is used to vary the pulse frequency to create a more pleasant sound.

Dependency: The modulator configuration is overwritten when the power unit (p0201) or the line filter type (p0220) is changed.

It is possible that special settings required for the modulator must be newly set.

Note: It is only possible to modify the parameter for p1810.2 = 1 (wobbulation activated).

The change between the selected wobble width and the wobble width zero is also possible in operation with the pulses enabled (p1810.4).

p1812 BI: Offset calibration output current measurement / Off_calibr I_outp

VECTOR, VECTOR_AC, VECTOR_I_AC

Can be changed: T	**Calculated:** -	**Access level:** 4
Data type: Unsigned32 / Binary	**Dyn. index:** -	**Func. diagram:** -
P-Group: Modulation	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	1

Description: Sets the signal source to activate/deactivate offset calibration for output current measurement.

Caution: The absence of offset calibration can have a negative effect on control properties. Offset calibration must be performed before switching on the power unit for the first time after POWER ON.

Note: Offset calibration is only performed with pulses suppressed and can take up to one second.

p1814[0...n] Vdc filter dead band for modulation switchover / Vdc filt dead band

VECTOR, VECTOR_AC, VECTOR_I_AC

Can be changed: U, T	**Calculated:** -	**Access level:** 4
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** -
P-Group: Modulation	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.0 [%]	12.0 [%]	0.0 [%]

Description: Sets the filter dead bandwidth for the DC link voltage signal to switch over the modulation type for optimized pulse patterns.

The parameter value refers to the rated line voltage of the power unit.

Recommendation: For power units with controlled regenerative line feedback, a value of approximately 2 % is recommended.
For all other power units, a value of approximately 8 % (as a result of the increased DC link voltage ripple under load).

p1815 Phase for PWM generation subgroup / Ph for PWM subgr

SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, A_INF, S_INF, R_INF

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** -
P-Group: Modulation	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0001 bin

Description: Sets bit 0 for recording the power unit in the subgroup for the "offset clocking".

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Recording in subgroup for offset clocking	Yes	No	-

Dependency: Refer to: p1818, p1819

Note: A change only becomes effective after booting.

If one of the following secondary conditions is not fulfilled, then none of the power units from the subgroup are clocked with an offset.

Secondary conditions for clocking with an offset:

- the PWM frequency (p1800[D]) of all power units in the subgroup must be the same.

- the PWM frequency (p1800[D]) must be the same in all drive data sets in the subgroup.

- the following must apply for the ratio between the PWM cycle (1/p1800[D]) and the current controller cycle (p0115[0]):

The ratio (1/p1800[D]) / (p0115[0]) must be an even integer number (2, 4, 6, ...) for all power units in the subgroup.

or

The ratio (p0115[0]) / (1/p1800[D]) must be an integer number (1, 2, 3, ...) for all power units in the subgroup.

p1816 Set phase for PWM generation manually / Set Ph for PWM

SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, A_INF, S_INF, R_INF

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Integer16	**Dyn. index:** -	**Func. diagram:** -
P-Group: Modulation	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-1	16	-1

Description: Sets manual setting and overwriting of automatically determined phase shift for "offset clocking".

For p1816 = -1, the following applies:

Automatic mode. The phase shift value is automatically determined.

For p1816 = 0 ... 16, the following applies:

Manual mode. The user should define the phase shift value as follows:

1. PWM cycle (1/p1800) > current controller cycle (p0115[0])

The power unit executes a phase shift from Tshift = current controller cycle (p0115[0]) * p1816.

2. PWM cycle (1/p1800) <= current controller clock cycle (p0115[0])

For p1816 >= 1, the power unit executes a phase shift from Tshift = PWM cycle/2.

Dependency: Refer to: r0116, p1800, p1819

p1817 Minimum ratio, pulse frequency to the output frequency / Min f_puls / f_max

VECTOR, VECTOR_AC, VECTOR_I_AC

Can be changed: C2(2)	**Calculated:** -	**Access level:** 4
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Converter	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
8.3	15.0	12.0

Description: Sets the minimum ratio between the pulse frequency and the output frequency.

Notice: If the ratio between the pulse frequency and the output frequency is reduced, then oscillations can occur in the output current that can result in significant levels of current ripple with the appropriate negative effects.

Note: When the maximum speed is changed, the pulse frequency p1800 is automatically limited to this minimum ratio. It is not permissible to reduce the pulse frequency if this would result in this ratio being undershot.

p1818 Phase for PWM generation configuration / Ph for PWM config

CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: Integer16	**Dyn. index:** -	**Func. diagram:** -
P-Group: Modulation	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	1	1

Description: Sets the phase shift for offset clocking.

For the first active power unit, it is specified whether clocking is to start at 0° (value = 0) or 180° (value = 1). All other active power units are clocked alternately according to the setting made here.

Dependency: Refer to: p1819

Note: A change only becomes effective after a POWER ON.

The parameter is not influenced by setting the factory setting.

p1819 Phase for PWM generation / Ph for PWM

SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, S_INF

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Integer16	**Dyn. index:** -	**Func. diagram:** -
P-Group: Modulation	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-1	16	-1

Description: Display for "offset clocking".

Depending on the particular case, the value is interpreted differently:

Case 1:

The PWM clock cycle (1/p1800[D]) is greater than the current controller clock cycle (p115[0]) and the ratio between the PWM clock cycle and the current controller clock cycle and is an integer and even multiple of it (e.g. p0115[0] = 125 µs, p1800[D] = 4 kHz, 2 kHz, 1 kHz).

The value displayed refers to:

- the phase shift in the current-controller cycles to be executed by the power unit.

Case 2:

The PWM clock cycle (1/p1800[D]) is less than or equal to the current controller clock cycle (p0115[0]) and the ratio between the current controller clock cycle and the PWM clock cycle is an integer and even multiple of it (e.g. p0115[0] = 125 µs, p1800[D] = 8 kHz, 16 kHz).

The value 1 displayed means that:

- the power unit is to apply a phase shift of 180 ° (from the PWM cycle).

A value of 0 displayed on all power units of the drive line-up means the following:

- the general conditions of the "offset clocking" (see p1815) are not fulfilled, i.e. no power unit is clocked with an offset.

Dependency: Refer to: p0108, r0108, p0115, p1800, p1815, p1816, p1818

Note: For reasons of compatibility, the parameter is an adjustable parameter. However, it functions solely as a display parameter. This means that factory setting -1 no longer has any significance and is only available for reasons of compatibility.

p1819 Phase for PWM generation / Ph for PWM

A_INF, R_INF

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Integer16	**Dyn. index:** -	**Func. diagram:** -
P-Group: Modulation	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-1	16	0

Description: Display for "offset clocking".

Depending on the particular case, the value is interpreted differently:

Case 1:

The PWM clock cycle is greater than the current controller clock cycle (p0115[0]) and the ratio between the PWM clock cycle and the current controller clock cycle and is an integer and even multiple of it (e.g. p0115[0] = 125 µs, pulse frequency = 4 kHz, 2 kHz).

The value displayed refers to:

- the phase shift in the current-controller cycles to be executed by the power unit.

Case 2:

The PWM clock cycle is less than or equal to the current controller clock cycle (p0115[0]) and the ratio between the current controller clock cycle and the PWM clock cycle is an integer and even multiple of it (e.g. p0115[0] = 125 µs, pulse frequency = 8 kHz, 16 kHz).

The value 1 displayed means that:

- the power unit is to apply a phase shift of 180 ° (from the PWM cycle).

A value of 0 displayed on all power units of the drive line-up means the following:

- the general conditions of the "offset clocking" (see p1815) are not fulfilled, i.e. no power unit is clocked with an offset.

Dependency: Refer to: p0108, r0108, p0115, p1800, p1815, p1816, p1818

Note: For reasons of compatibility, the parameter is an adjustable parameter. However, it functions solely as a display parameter. This means that the minimum value -1 no longer has any significance and is only available for reasons of compatibility.

p1820[0...n] Invert output voltage / U_output inv

HLA

Can be changed: C2(3)	**Calculated:** CALC_MOD_CON	**Access level:** 3
Data type: Integer16	**Dyn. index:** DDS, p0180	**Func. diagram:** 4966
P-Group: Motor	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	1	0

Description: Setting to invert the output voltage.

This means that with the same setpoint, the piston direction is reversed without inverting the encoder actual value.

When a velocity encoder is being used, it may be necessary to also invert the encoder actual value (p0410).

Value:
0: OFF
1: ON

Note: This setting can only be changed when the controller is inhibited.

p1820[0...n] Reverse the output phase sequence / Outp_ph_seq rev

VECTOR, VECTOR_AC, VECTOR_I_AC

Can be changed: C2(3)	**Calculated:** -	**Access level:** 3
Data type: Integer16	**Dyn. index:** DDS, p0180	**Func. diagram:** 6732
P-Group: Motor	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	1	0

Description: Sets the phase sequence reversal for the motor.

If the motor does not rotate in the required direction, then the output phase sequence can be reversed using this parameter. This means that with the same setpoint, the motor direction is reversed without reversing the encoder actual value.

When a speed encoder is being used, it may be necessary to also invert the encoder actual value (p0410).

Value:
0: OFF
1: ON

Dependency: Refer to: p1821

Caution: For 12-pulse converters with 30° offset angle for system 2, for a direction of rotation reversal, the phase offset changes by 60° as the sign of the angle offset changes. This can be adapted in p1810.15.

Changing the direction using p1820 or p1821 is not recognized by the "Safe Direction without encoder". As a consequence, the limit provided by SDI (Safe Direction) from r9733 no longer functions.

Note: This setting can only be changed when the pulses are inhibited.

p1821 can be used to reverse the phase sequence and encoder actual value.

p1821[0...n] Direction / Direction

HLA

Can be changed: C2(3)	**Calculated:** -	**Access level:** 3
Data type: Integer16	**Dyn. index:** DDS, p0180	**Func. diagram:** -
P-Group: Motor	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	1	0

Description: Setting to change the direction.

If the parameter is changed, it reverses the direction of rotation of the cylinder and the encoder actual value without changing the setpoint.

Value:
0: Clockwise
1: Counter-clockwise

Dependency: Refer to: F07434

Notice: For a drive data set changeover with differently set direction and power enable, an appropriate fault is output.

The piston must be recalibrated after a direction reversal.

After changing parameter p1821, the direction of rotation is not automatically adapted in the safety area. The following parameters can be used to set the direction of rotation for safety monitoring:

-SI Motion encoder configuration safety functions - position actual value sign change (p9516.1/p9316.1, only active for operation with encoder)

Note: The actual velocity (e.g. r0063) is also reversed so that the control sense is kept and internally causing the direction of rotation to be reversed with the same setpoint. Further, the position actual values of the actual encoder are reversed (e.g. r0482[0...2]).

p1820 can be used to reverse the direction of the cylinder without reversing the encoder actual value.

p1821[0...n] Direction of rotation / Dir of rot

SERVO, SERVO_AC, SERVO_I_AC

Can be changed: C2(3)	**Calculated:** -	**Access level:** 3
Data type: Integer16	**Dyn. index:** DDS, p0180	**Func. diagram:** 4704, 4710, 4711, 4715, 5730, 6730, 6731, 6732
P-Group: Motor	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	1	0

Description: Setting to change the direction of rotation.

If the parameter is changed, it reverses the direction of rotation of the motor and the encoder actual value without changing the setpoint.

Value:
0: Clockwise
1: Counter-clockwise

Dependency: Refer to: F07434

Notice: An appropriate fault is output for a drive data set changeover where the direction of rotation changes and the pulses are enabled.

After changing parameter p1821, the direction of rotation is not automatically adapted in the safety area. The following parameters can be used to set the direction of rotation for safety monitoring:

-SI Motion encoder configuration safety functions - position actual value sign change (p9516.1/p9316.1, only active for operation with encoder)

-SI Motion gearbox direction of rotation reversal (p9539/p9339, also active for encoderless operation)

Note: For operation with the phase sequence U/V/W, the direction of rotation is defined when viewing the face side of the motor output shaft.

When changing the direction of rotation, the rotating field direction of the current controller is reversed. The speed actual value (e.g. r0063) is also reversed so that the control sense is kept and internally causing the direction of rotation to be reversed with the same setpoint. Further, the position actual values of the actual encoder are reversed (e.g. r0482[0...2]).

p1821[0...n] Direction / Direction

SERVO (Lin), SERVO_AC (Lin), SERVO_I_AC (Lin)

Can be changed: C2(3)	**Calculated:** -	**Access level:** 3
Data type: Integer16	**Dyn. index:** DDS, p0180	**Func. diagram:** 4704, 4710, 4711, 4715, 5730, 6730, 6731, 6732
P-Group: Motor	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	1	0

Description: Setting to change the direction.

If the parameter is changed, it reverses the direction of rotation of the motor and the encoder actual value without changing the setpoint.

Value:
0: Clockwise
1: Counter-clockwise

Dependency: Refer to: F07434

Notice: For a drive data set changeover with differently set direction and pulse enable, an appropriate fault is output.

After changing parameter p1821, the direction of rotation is not automatically adapted in the safety area. The following parameters can be used to set the direction of rotation for safety monitoring:

-SI Motion encoder configuration safety functions - position actual value sign change (p9516.1/p9316.1, only active for operation with encoder)

-SI Motion gearbox direction of rotation reversal (p9539/p9339, also active for encoderless operation)

Note: For operation with the phase sequence U/V/W, the direction is defined when viewing the face side of the motor output shaft.

When changing the direction, the rotating field direction of the current controller is reversed. The actual velocity (e.g. r0063) is also reversed so that the control sense is kept and internally causing the direction of rotation to be reversed with the same setpoint. Further, the position actual values of the actual encoder are reversed (e.g. r0482[0...2]).

For VECTOR, the following applies:

p1820 can be used to reverse the direction of the motor without reversing the encoder actual value.

p1821[0...n] Direction of rotation / Dir of rot

VECTOR, VECTOR_AC, VECTOR_I_AC

Can be changed: C2(3)	**Calculated:** -	**Access level:** 3
Data type: Integer16	**Dyn. index:** DDS, p0180	**Func. diagram:** 4704, 4710, 4711, 4715, 5730, 6730, 6731, 6732
P-Group: Motor	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	1	0

Description: Setting to change the direction of rotation.

If the parameter is changed, it reverses the direction of rotation of the motor and the encoder actual value without changing the setpoint.

Value:
0: Clockwise
1: Counter-clockwise

Dependency: Refer to: F07434

Danger: When using external speed actual values for the speed controller (see p1440), for a direction of rotation change (p1821 = 1), then its polarity must also be changed (e.g. for drive object ENCODER via p0410). Otherwise, a positive coupling can occur in the speed control loop and the drive would then be accelerated up to the speed limit.

Caution: For 12-pulse converters with 30° offset angle for system 2, for a direction of rotation reversal, the phase offset changes by 60° as the sign of the angle offset changes. This can be adapted in p1810.15.

Notice: An appropriate fault is output for a drive data set changeover where the direction of rotation changes and the pulses are enabled.

After changing parameter p1821, the direction of rotation is not automatically adapted in the safety area. The following parameters can be used to set the direction of rotation for safety monitoring:

-SI Motion encoder configuration safety functions - position actual value sign change (p9516.1/p9316.1, only active for operation with encoder)

-SI Motion gearbox direction of rotation reversal (p9539/p9339, also active for encoderless operation)

Note: For operation with the phase sequence U/V/W, the direction of rotation is defined when viewing the face side of the motor output shaft.

When changing the direction of rotation, the rotating field direction of the current controller is reversed. The speed actual value (e.g. r0063) is also reversed so that the control sense is kept and internally causing the direction of rotation to be reversed with the same setpoint. Further, the position actual values of the actual encoder are reversed (e.g. r0482[0...2]).

p1820 can be used to reverse the direction of the motor without reversing the encoder actual value.

p1821[0...n] Direction of rotation / Dir of rot

VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)

Can be changed: C2(3)	**Calculated:** -	**Access level:** 3
Data type: Integer16	**Dyn. index:** DDS, p0180	**Func. diagram:** 4704, 4710, 4711, 4715, 5730, 6730, 6731, 6732
P-Group: Motor	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	1	0

Description: Setting to change the direction of rotation.

If the parameter is changed, it reverses the direction of rotation of the motor and the encoder actual value without changing the setpoint.

Value:
0: Clockwise
1: Counter-clockwise

Dependency: Refer to: p6278

Refer to: F07434

Danger: When using external speed actual values for the speed controller (see p1440), for a direction of rotation change (p1821 = 1), then its polarity must also be changed (e.g. for drive object ENCODER via p0410). Otherwise, a positive coupling can occur in the speed control loop and the drive would then be accelerated up to the speed limit.

Caution: For 12-pulse converters with 30° offset angle for system 2, for a direction of rotation reversal, the phase offset changes by 60° as the sign of the angle offset changes. This can be adapted in p1810.15.

When using a separately excited synchronous machine with reverse field excitation, when setting p1821, it must be checked as to whether the phase sequence of the exciter converter must also be changed.

Notice: An appropriate fault is output for a drive data set changeover where the direction of rotation changes and the pulses are enabled.

After changing parameter p1821, the direction of rotation is not automatically adapted in the safety area. The following parameters can be used to set the direction of rotation for safety monitoring:

-SI Motion encoder configuration safety functions - position actual value sign change (p9516.1/p9316.1, only active for operation with encoder)

-SI Motion gearbox direction of rotation reversal (p9539/p9339, also active for encoderless operation)

Note: For operation with the phase sequence U/V/W, the direction of rotation is defined when viewing the face side of the motor output shaft.

When changing the direction of rotation, the rotating field direction of the current controller is reversed. The speed actual value (e.g. r0063) is also reversed so that the control sense is kept and internally causing the direction of rotation to be reversed with the same setpoint. Further, the position actual values of the actual encoder are reversed (e.g. r0482[0...2]).

p1820 can be used to reverse the direction of the motor without reversing the encoder actual value.

p1822 Power unit line phases monitoring tolerance time / PU ph monit t_tol

SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC

Can be changed: T	**Calculated:** -	**Access level:** 4
Data type: Unsigned32	**Dyn. index:** -	**Func. diagram:** -
P-Group: -	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
500 [ms]	540000 [ms]	1000 [ms]

Description: Sets the tolerance time for line phase monitoring for blocksize power units.

If a line phase fault is present for longer than this tolerance time, then a corresponding fault is output.

Dependency: Refer to: F30011

Notice: When operating with a failed line phase, depending on the active power, values higher than the default value can either immediately damage the power unit or damage it over the long term.

Note: For the setting p1822 = maximum value, line phase monitoring is deactivated.

p1825 Converter valve threshold voltage / Threshold voltage

VECTOR, VECTOR_AC, VECTOR_I_AC

Can be changed: U, T	**Calculated:** CALC_MOD_ALL	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -

Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.01 [%]	95.00 [%]	0.01 [%]

Description: Sets the flow rate Q for point 1 negative (zero range) of the transition point compensation.

Dependency: Refer to: r1837, p1837, r1838, p1838

r1836[0...1] Pulse frequency reduction, switchover frequency / f_puls_red f_sw

VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Modulation	**Unit group:** -	**Unit selection:** -
Not for motor type: SESM, REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
- [Hz]	- [Hz]	- [Hz]

Description: Displays the frequency limits, under which the pulse frequency is automatically reduced.

Starting from the parameterized pulse frequency p1800, the pulse frequency is reduced to the next possible one, if the frequency limits and an additional hysteresis are fallen below.

Index: [0] = Frequency limit 1
[1] = Frequency limit 2

Dependency: Refer to: p1810, p1835

Note: The pulse frequency reduction is not active for U/f control.

A minimum clearance of 10 Hz is kept between the frequency thresholds, which cannot be fallen below when changing p1835.

For index [0]:

Frequency limit for the first pulse frequence reduction (active for p1810.8 = 1).

For index [1]:

Frequency limit for the second pulse frequence reduction (active for p1810.9 = 1).

p1900 Motor data identification and rotating measurement / MotID and rot meas

VECTOR, VECTOR_AC, VECTOR_I_AC

Can be changed: C2(1), T	**Calculated:** -	**Access level:** 1
Data type: Integer16	**Dyn. index:** -	**Func. diagram:** -
P-Group: Motor identification	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	2	2

Description: Sets the motor data identification and speed controller optimization.

p1900 = 0:

Function inhibited.

p1900 = 2:

Induction motors --> set p1910 = 1 and p1960 = 0

Permanent-magnet or separately excited synchronous motors --> set p1910 = 1, p1990 = 1 and p1960 = 0

When the drive enable signals are present, a motor data identification routine is carried out at standstill with the next switch-on command. Current flows through the motor which means that it can align itself by up to a quarter of a revolution.

For permanent-magnet or separately excited synchronous motors, the encoder is adjusted with the next switch-on command. The motor must be free to rotate and rotates through 1.5 revolutions of the motor encoder.

Value:
0: Inhibited
2: Identify motor data (stationary)

Dependency: In the simulation mode, the parameter cannot be written into.

When selecting the motor data identification routine, the drive data set changeover is suppressed.

Refer to: p1272, p1300, p1910

Refer to: F07990, A07991

Notice: If there is a motor holding brake, it must be open (p1215 = 2).

To permanently accept the determined settings they must be saved in a non-volatile fashion (p0971, p0977).

It is not permissible to activate write protection during the motor identification (p7761).

During the rotating measurement it is not possible to save the parameters (p0971, p0977).

Note: The motor and control parameters of the vector control are only optimally set when both measurements are carried out (initially at standstill, and then with the motor rotating). The measurement with rotating motor is not performed for p1300 < 20 (U/f controls).

An appropriate alarm is output when the parameter is set.

The switch-on command must remain set during a measurement and after the measurement has been completed, the drive automatically resets it.

The duration of the measurements can lie between 0.3 s and several minutes. This time is, for example, influenced by the motor size and the mechanical conditions.

p1900 is automatically set to 0 after the motor data identification routine has been completed.

For a reluctance motor, a pole position identification is carried out during the stationary measurement. As a consequence, faults that occur can also be assigned to the pole position identification.

For U/f control (p1300), identification with speed controller optimization does not make sense (e.g. p1900 = 1).

p1900	Motor data identification and rotating measurement / MotID and rot meas		
VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	**Can be changed:** C2(1), T	**Calculated:** -	**Access level:** 1
	Data type: Integer16	**Dyn. index:** -	**Func. diagram:** -
	P-Group: Motor identification	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0	3	2

Description: Sets the motor data identification and speed controller optimization.

The motor identification should first be performed with the motor stationary (p1900 = 1, 2; also refer to p1910). Based on this, additional motor and control parameters can be determined using the motor data identification with the motor rotating (p1900 = 1, 3; also refer to p1960); not for p1300 < 20.

p1900 = 0:

Function inhibited.

p1900 = 1:

Induction motors --> set p1910 = 1 and p1960 = 0, 1, 2 depending on p1300

Permanent-magnet or separately excited synchronous motors --> set p1910 = 1, p1990 = 1 and p1960 = 0, 1, 2 depending on p1300

When the drive enable signals are present, a motor data identification routine is carried out at standstill with the next switch-on command. Current flows through the motor which means that it can align itself by up to a quarter of a revolution.

For permanent-magnet or separately excited synchronous motors, the encoder is adjusted with the next switch-on command. The motor must be free to rotate and rotates through 1.5 revolutions of the motor encoder.

With the following switch-on command, a rotating motor data identification routine is carried out - and in addition, a speed controller optimization by making measurements at different motor speeds.

p1900 = 2:

Induction motors --> set p1910 = 1 and p1960 = 0

Permanent-magnet or separately excited synchronous motors --> set p1910 = 1, p1990 = 1 and p1960 = 0

When the drive enable signals are present, a motor data identification routine is carried out at standstill with the next switch-on command. Current flows through the motor which means that it can align itself by up to a quarter of a revolution.

For permanent-magnet or separately excited synchronous motors, the encoder is adjusted with the next switch-on command. The motor must be free to rotate and rotates through 1.5 revolutions of the motor encoder.

p1900 = 3:

Sets p1960 = 0, 1, 2 depending on p1300

This setting should only be selected if the motor data identification was already carried out at standstill.

When the drive enable signals are present, with the next switch-on command, a rotating motor data identification routine is carried out - and in addition, speed controller optimization by taking measurements at different motor speeds.

Value:
0: Inhibited
1: Motor data ident. (stationary) and sp. contr. opt.
2: Identify motor data (stationary)
3: Optimize speed controller (rotating)

Dependency: In the simulation mode, the parameter cannot be written into.

When selecting the motor data identification routine, the drive data set changeover is suppressed.

Refer to: p1272, p1300, p1910, p1960, p1990

Refer to: A07980, A07981, F07982, F07983, F07984, F07985, F07986, A07987, F07988, F07990, A07991

Notice: If there is a motor holding brake, it must be open (p1215 = 2).

To permanently accept the determined settings they must be saved in a non-volatile fashion (p0971, p0977).

It is not permissible to activate write protection during the motor identification (p7761).

During the rotating measurement it is not possible to save the parameters (p0971, p0977).

p1900 = 3:

This setting should only be selected if the motor data identification was already carried out at standstill.

Note: The motor and control parameters of the vector control are only optimally set when both measurements are carried out (initially at standstill, and then with the motor rotating). The measurement with rotating motor is not performed for p1300 < 20 (U/f controls).

An appropriate alarm is output when the parameter is set.

The switch-on command must remain set during a measurement and after the measurement has been completed, the drive automatically resets it.

The duration of the measurements can lie between 0.3 s and several minutes. This time is, for example, influenced by the motor size and the mechanical conditions.

p1900 is automatically set to 0 after the motor data identification routine has been completed.

For a reluctance motor, a pole position identification is carried out during the stationary measurement. As a consequence, faults that occur can also be assigned to the pole position identification.

For U/f control (p1300), identification with speed controller optimization does not make sense (e.g. p1900 = 1).

p1901 Test pulse evaluation configuration / Test puls config

VECTOR, VECTOR_AC, VECTOR_I_AC

Can be changed: T	**Calculated:** CALC_MOD_ALL	**Access level:** 2
Data type: Unsigned32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Motor identification	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0000 bin

Description: Sets the configuration for the test pulse evaluation.

Bit 00: Check for conductor-to-conductor short circuit once/always when the pulses are enabled.

Bit 01: Check for ground fault once/always when the pulses are enabled.

Bit 02: Activation of the tests selected using bit 00 and/or bit 01 each time the pulses are enabled

Recommendation: If the ground fault test is incorrectly initiated because the motor is not at a complete standstill, then the pulse cancellation delay time (p1228) should be increased.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Phase short-circuit test pulse active	Yes	No	-
01	Ground fault detection test pulse active	Yes	No	-
02	Test pulse at each pulse enable	Yes	No	-

Dependency: The ground fault test is only possible when the motor is stationary, and is therefore only realized when flying restart is deactivated (p1200 = 0).

When a sine-wave filter is connected, the short-circuit and the ground fault test are deactivated, as the filter could be excited by the test pulse.

Refer to: p0287

Note: If a conductor-to-conductor short-circuit is detected during the test, this is displayed in r1902.1.

If a ground fault is detected during the test, this is displayed in r1902.2.

For bit 02 = 0:

If the test was successful once after POWER ON (see r1902.0), it is not repeated.

For bit 02 = 1:

The test is not only performed after POWER ON, but also each time the pulses are enabled.

r1902 Test pulse evaluation status / Test puls ev stat

VECTOR, VECTOR_AC, VECTOR_I_AC

Can be changed: -	**Calculated:** -	**Access level:** 2
Data type: Unsigned32	**Dyn. index:** -	**Func. diagram:** -
P-Group: -	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the status of the test pulse evaluation.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Short-circuit test successfully performed	Yes	No	-
01	Phase short-circuit detected	Yes	No	-
02	Ground fault test successfully performed	Yes	No	-
03	Ground fault detected	Yes	No	-
04	Identification pulse width greater than the minimum pulse width	Yes	No	-

Note: If the ground fault test was selected, but not successfully performed, then sufficient current was not be able to be established during the test pulses.

For bit 04:

A test pulse longer than one sampling time has occurred

p1903 BI: Data identification control / Data ident ctrl

HLA

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32 / Binary	**Dyn. index:** -	**Func. diagram:** -
P-Group: -	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	1

Description: Sets the signal source to control data identification (moving measurement).

For p1903 = 1 signal, the following applies:

- data identification is started using p1960 = -1 or 1.

For p1903 = 0 signal, the following applies:

- data identification is selected using p1960 = -1 or 1; however, is only actually executed with p1903 = 0/1 signal.

The following generally applies:

- when data identification is running, the function can be canceled with binector input p1903 = 0 signal.

p1905 Parameter tuning selection / Par tuning select

VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)

Can be changed: C2(1), T	**Calculated:** -	**Access level:** 1
Data type: Integer16	**Dyn. index:** -	**Func. diagram:** -
P-Group: Motor identification	**Unit group:** -	**Unit selection:** -
Not for motor type: ASM, REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	90	0

Description: The fine encoder calibration should be started during the first commissioning or after the encoder is replaced.

The fine calibration starts when the pulses are enabled and performs a rotating measurement (approximately 1 minute). In this case, a setpoint speed of at least 40 % of the motor rated speed must be entered, and the torque must be less than half of the motor rated torque.

The phases of the fine calibration of displayed using alarm A07976.

The fine calibration ends with the calculation of p0431 for the following pulse inhibit.

p1905 is automatically set to 0 at the end of the fine calibration.

Value:
0: Inactive
90: Fine encoder calibration

Dependency: If the motor encoder adjustment has not been performed (p3925.4 = 0) or the encoder calibration is activated (p1990 != 0), then encoder fine calibration is prevented.

Refer to: p1272, p1910, p1960, p1990

Refer to: A07976

Notice: During encoder fine calibration, the motor must be operated without a load - and if a motor holding brake is being used, this must be opened.

Note: For p1905 = 90 and with the pulses not enabled, the function is only executed the next time that the pulses are enabled.

When selecting the encoder fine calibration, the changeover of the motor data sets is suppressed.

p1909 Data identification without enabling activation / Data ID w/o enab

HLA

Can be changed: U, T	**Calculated:** CALC_MOD_ALL	**Access level:** 3
Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** -

Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0000 bin

Description: Activates the stationary data identification without enable.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Pressure sensors execute offset calibration	Yes	No	-
01	Execute piston calibration	Yes	No	-

Dependency: Refer to: p1910

Note: The offset calibration is immediately started when writing to p1909. The associated bit is automatically reset if the function was executed.

For bit 00:

The precondition for the offset calibration is that the pressure at all of the pressure sensors is zero. The offset is entered in p0241, p0243 and p0245.

For bit 01:

The precondition is that the cylinder must have been completely retracted (piston at the A side). The position offset is entered in p0476.

p1909[0...n] Motor data identification control word / MotID STW

SERVO, SERVO_AC, SERVO_I_AC

Can be changed: T	**Calculated:** CALC_MOD_ALL	**Access level:** 3
Data type: Unsigned16	**Dyn. index:** MDS, p0130	**Func. diagram:** -
P-Group: Motor identification	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0010 0111 0000 0000 bin

Description: Sets the configuration for the motor data identification.

Recommendation: For the stationary motor data identification, if a motor holding brake is being used it should be opened and the motor finely synchronized before the measurement. This should only be done if it can be safely carried out and no external forces can act on the motor. This determines the angular commutation offset (p1909.13, p0431).

Bit field:

Bit	Signal name	1 signal	0 signal	FP
08	Measure D inductance	Yes	No	-
09	Measure Q inductance	Yes	No	-
10	Magnetizing field inductance and measure rotor resistance	Yes	No	-
13	Measure commutation angle and direction of rotation	Yes	No	-
14	Determining the voltage emulation error	Yes	No	-

Dependency: Refer to: p1910, r1912, r1913, r1915, r1925, r1927, r1932, r1933, r1934, r1935, r1936, r1950, r1951, p1952, p1953

Note: For an induction motor (ASM) the following bits: 8, 9, 10, 13 are effective

For a synchronous motor (SRM) the following bits: 8, 9, 13, 14 are effective

For bit 14:

- the display of the phase voltage actual values (r0089), the actual active power value (r0082) and the torque actual value (r0080) is significantly more accurate after successfully determining the voltage emulation error.
- the voltage emulation errors should be identified with the Motor Module in the warm state.
- the motor temperature (r0035) should not change significantly (i.e. it should not be identified immediately after a load duty cycle).

p1909[0...n] Motor data identification control word / MotID STW

SERVO (Ext M_ctrl, Lin), SERVO_AC (Ext M_ctrl, Lin), SERVO_I_AC (Ext M_ctrl, Lin)

p1909[0...n] Motor data identification control word / MotID STW

VECTOR, VECTOR_AC, VECTOR_I_AC

Can be changed: T	**Calculated:** CALC_MOD_ALL	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** MDS, p0130	**Func. diagram:** -
P-Group: Motor identification	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0000 0000 0000 0000 0000 0000 0000 0000 bin

Description: Sets the configuration for the motor data identification.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Stator inductance estimate no measurement	Yes	No	-
01	Cl.-loop current control w/ dead-beat controller	Yes	No	-
02	Rotor time constant estimate no measurement	Yes	No	-
03	Leakage inductance estimate no measurement	Yes	No	-

04	Activates the identification dynamic leakage inductance	Yes	No	-
05	Determine Tr and Lsig evaluation in the time range	Yes	No	-
06	Activate vibration damping	Yes	No	-
07	Deactivate vibration detection	Yes	No	-
11	Deactivate pulse measurement Lq Ld	Yes	No	-
12	Deactivate rotor resistance Rr measurement	Yes	No	-
14	Deactivate valve interlocking time measurement	Yes	No	-
15	Determine only stator resistance, valve voltage fault, dead time	Yes	No	-
16	Short motor identification (lower quality)	Yes	No	-
17	Measurement without control parameter calculation	Yes	No	-
20	Estimate cable resistance	Yes	No	-
22	Only identify circle	Yes	No	-
23	Deactivate circle identification	Yes	No	-
24	Circle identification with 0 and 90 degrees	Yes	No	-
25	Deactivate gating unit switchover	Yes	No	-

Note: The following applies to permanent-magnet synchronous motors:

Without de-selection in bit 11, in the closed-loop control mode, the direct inductance LD and the quadrature inductance Lq are measured at a low current.

When de-selecting with bit 11 or in the U/f mode, the stator inductance is measured at half the rated motor current.

If the stator is inductance is not measured but is to be estimated, then bit 0 should be set and bit 11 should be de-selected.

p1910 Valve offset calibration standstill activation / Valv_off_calib act

HLA

Can be changed: U, T	**Calculated:** -	**Access level:** 2
Data type: Integer16	**Dyn. index:** -	**Func. diagram:** -
P-Group: Motor identification	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	1	0

Description: Setting to activate the standstill data valve offset calibration when enabled.

Value:
0: Inactive/cancel
1: Start calibration

Dependency: Precondition is position-controlled operation.

Refer to: p1909

Refer to: A07991

Note: The offset is entered in p1832.

The calibration is started when enabled, and after data identification has been completed, is automatically set back to a value of zero.

p1910 Motor data identification routine stationary (standstill) / MotID standstill

SERVO, SERVO_AC, SERVO_I_AC

Can be changed: T	**Calculated:** -	**Access level:** 2
Data type: Integer16	**Dyn. index:** -	**Func. diagram:** -
P-Group: Motor identification	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-3	1	0

Description: Setting to control the motor data identification with the motor stationary.

Value:
-3: Accept identified parameters
-2: Acknowledge encoder inversion actual value (F07993)
-1: Start motor data identification without acceptance
0: Inactive/inhibit
1: Start motor data identification with acceptance

Recommendation: For motors with brakes, the brake should be opened before carrying out the stationary motor data identification routine (p1215 = 2) as long as this can be done without incurring any danger. The commutation angle and the direction of rotation are also determined.

Motor data identification is not required for catalog motors and DRIVE-CLiQ motors. It is recommended to increase the torque accuracy or for third-party motors.

Dependency: Refer to: p1909, r1912, r1913, r1915, r1925, r1927, r1932, r1933, r1934, r1935, r1936, r1950, r1951, p1952, p1953

Refer to: F07990, A07991, F07993

Caution: For motors without brake or with the brake open (p1215 = 2), for the stationary (zero speed) measurement, the motor may rotate slightly.

Note: If there is a motor holding brake, it must be open (p1215 = 2).

To permanently accept the determined settings they must be saved in a non-volatile fashion (p0971, p0977).

Motor data identification can only be selected when the pulses of all of the drive objects of the Control Unit have been suppressed. After selection, all of the other drive objects of the Control Unit are interlocked so that they cannot be switched on until the motor data identification has been completed or de-selected.

After a started motor identification is ended, the parameter is automatically reset to 0.

A motor data identification that is presently being carried out can be terminated with p1910 = 0.

p1910 Motor data identification selection / MotID selection

VECTOR, VECTOR_AC, VECTOR_I_AC

Can be changed: T	**Calculated:** -	**Access level:** 2
Data type: Integer16	**Dyn. index:** -	**Func. diagram:** -
P-Group: Motor identification	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	28	1

Description: Sets the motor data identification routine.

The motor data identification routine is carried out after the next switch-on command.

p1910 = 1:

All motor data and the drive converter characteristics are identified and then transferred to the following parameters:

p0350, p0354, p0356, p0357, p0358, p0360, p1825, p1828, p1829, p1830

After this, the control parameter p0340 = 3 is automatically calculated.

Value:
0: Inhibited
1: Complete identification (ID) and acceptance of motor data
2: Complete identification (ID) of motor data without acceptance
3: ID of the saturation characteristic and acceptance
4: ID of the saturation characteristic without acceptance
5: ID of dynamic leakage inductance Lsig (r1920) without acceptance
6: ID of lockout time (r1926) without acceptance
7: ID of stator resistance Rs (r1912) without acceptance
8: ID of stator inductance Ls (r1915) Rr (r1927) without acceptance
9: ID of rotor time constant Tr (r1913) without acceptance
10: ID of static leakage inductance Lsig (r1914) without acceptance
20: Voltage vector input
21: Voltage vector input without filter
22: Rectangular voltage vector input without filter
23: Triangular voltage vector input without filter
24: Rectangular voltage vector input with filter
25: Triangular voltage vector input with filter
26: Enter voltage vector with DTC correction
27: Enter voltage vector with AVC
28: Enter voltage vector with DTC + AVC correction

Dependency: "Quick commissioning" must be carried out (p0010 = 1) before executing the motor data identification routine!

In the simulation mode, the parameter cannot be written into. When selecting the motor data identification routine, the drive data set changeover is suppressed.

Refer to: p1272, p1900

Refer to: F07990, A07991

Notice: After the motor data identification (p1910 > 0) has been selected, alarm A07991 is output and a motor data identification routine is carried out as follows at the next switch-on command:

- current flows through the motor and a voltage is present at the drive converter output terminals.

- during the identification routine, the motor shaft can rotate through a maximum of half a revolution.

- however, no torque torque is generated.

Note: If there is a motor holding brake, it must be open (p1215 = 2).

To permanently accept the determined settings they must be saved in a non-volatile fashion (p0971, p0977).

When setting p1910, the following should be observed:

1. "With acceptance" means:

The parameters specified in the description are overwritten with the identified values and therefore have an influence on the controller setting.

2. "Without acceptance" means:

The identified parameters are only displayed in the range r1912 ... r1926. The controller settings remain unchanged.

3. p1910 = 3, 4, 5 can only be selected for induction motors.

4. For settings 27 and 28, the AVC configuration set using p1840 is active.

The switch-on command must remain set during a measurement and after the measurement has been completed, the drive automatically resets it. The duration of the measurements can lie between 0.3 s and several minutes. This time is mainly influenced by the motor size. At the end of the motor data identification, p1910 is automatically set to 0, if only the stationary measurement is selected, then p1900 is also reset to 0, otherwise, the rotating measurement is activated.

p1911 Phases to be identified number / Ph to ident qty

VECTOR, VECTOR_AC, VECTOR_I_AC

Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
- [ohm]	- [ohm]	- [ohm]

Description: Displays the identified rotor resistance.

Dependency: Refer to: p1909, p1910, r1912, r1913, r1915, r1925, r1932, r1933, r1934, r1935, r1936, r1950, r1951, p1952, p1953

r1927[0...2] Identified rotor resistance / R_rotor ident

VECTOR, VECTOR_AC, VECTOR_I_AC

Can be changed: -	**Calculated:** -	**Access level:** 4
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Motor identification	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
- [ohm]	- [ohm]	- [ohm]

Description: Displays the identified rotor resistance (for separately-excited synchronous motors: damping resistance).

Index:
[0] = Phase U
[1] = Phase V
[2] = Phase W

r1929[0...2] Identified cable resistance / R_cable ident

VECTOR, VECTOR_AC, VECTOR_I_AC

Can be changed: -	**Calculated:** -	**Access level:** 4
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Motor identification	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
- [ohm]	- [ohm]	- [ohm]

Description: Displays the identified cable resistance.

Index:
[0] = Phase U
[1] = Phase V
[2] = Phase W

r1932[0...19] d inductance identified / Ld ident

SERVO, SERVO_AC, SERVO_I_AC

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Motor identification	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
- [mH]	- [mH]	- [mH]

Description: Displays the identified (differential) d-inductance.

Dependency: Refer to: p1909, p1910, r1912, r1913, r1915, r1925, r1927, r1933, r1934, r1935, r1936, r1950, r1951, p1952, p1953

Note: The Ld characteristic consists of the value pairs from p1932 and p1933 with the same index.

This value corresponds to the value of the total leakage inductance (r0377).

r1933[0...19] d inductance identification current / Ld I_ident

SERVO, SERVO_AC, SERVO_I_AC

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Motor identification	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
- [Arms]	- [Arms]	- [Arms]

Description: Displays the identification current of the d inductance.

Dependency: Refer to: p1909, p1910, r1912, r1913, r1915, r1925, r1927, r1932, r1934, r1935, r1936, r1950, r1951, p1952, p1953

Note: The Ld characteristic consists of the value pairs from p1932 and p1933 with the same index.

r1934[0...9] q inductance identified / Lq ident

SERVO, SERVO_AC, SERVO_I_AC

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Motor identification	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
- [mH]	- [mH]	- [mH]

Description: Displays the identified (differential) q-inductance.

Dependency: Refer to: p1909, p1910, r1932, r1933

Note: The Lq characteristic consists of the value pairs from p1934 and p1935 with the same index.

This value corresponds to the value of the total leakage inductance (r0377).

r1934[0...9] q inductance identified / Lq ident

VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)

Can be changed: -	**Calculated:** -	**Access level:** 4
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Motor identification	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
- [mH]	- [mH]	- [mH]

Description: Displays the identified (differential) q-inductance.

Dependency: Refer to: r1935, p1959, p1960

Note: The Lq characteristic consists of the value pairs from p1934 and p1935 with the same index.

This value corresponds to the value of the total leakage inductance (r0377).

r1935[0...20] Identification current / I_ident

SERVO, SERVO_AC, SERVO_I_AC

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Motor identification	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
- [Arms]	- [Arms]	- [Arms]

Description: Displays the identification current for the identification of the q-inductance ([0...9]) as well as the torque constant ([10]) and the torque characteristic ([11...20]).

Index:
[0] = q inductance identification current measuring point 1
[1] = q inductance identification current measuring point 2
[2] = q inductance identification current measuring point 3
[3] = q inductance identification current measuring point 4
[4] = q inductance identification current measuring point 5
[5] = q inductance identification current measuring point 6
[6] = q inductance identification current measuring point 7
[7] = q inductance identification current measuring point 8
[8] = q inductance identification current measuring point 9
[9] = q inductance identification current measuring point 10
[10] = Torque constant identification current
[11] = Torque characteristic identification current measuring point 1
[12] = Torque characteristic identification current measuring point 2
[13] = Torque characteristic identification current measuring point 3
[14] = Torque characteristic identification current measuring point 4
[15] = Torque characteristic identification current measuring point 5
[16] = Torque characteristic identification current measuring point 6
[17] = Torque characteristic identification current measuring point 7
[18] = Torque characteristic identification current measuring point 8
[19] = Torque characteristic identification current measuring point 9
[20] = Torque characteristic identification current measuring point 10

Dependency: Refer to: p1909, p1910, r1934, p1959, p1960

Note:
- the Lq characteristic consists of the value pairs from r1934 and r1935 with the same index.
- the torque constant is identified with the current r1935[10] and displayed in r1937[0]. If the reluctance torque constant is identified (p1959.7 = 1), the torque constant is identified with 150% rated current (p0305), otherwise with 100% rated current.
- the torque characteristic (r1937[1...10]) is identified in the range between the rated current (p0305) and the maximum current (p0640) (r1935[11...20]).

r1935[0...20] Identification current / I_ident

[16] = Force characteristic identification current measuring point 6
[17] = Force characteristic identification current measuring point 7
[18] = Force characteristic identification current measuring point 8
[19] = Force characteristic identification current measuring point 9
[20] = Force characteristic identification current measuring point 10

Dependency: Refer to: p1909, p1910, r1934, p1959, p1960

Note: - the Lq characteristic consists of the value pairs from r1934 and r1935 with the same index.

- the force constant is identified with the current r1935[10] and displayed in r1937[0]. If the reluctance force constant is identified (p1959.7 = 1), the force constant is identified with 150% rated current (p0305), otherwise with 100% rated current.

- the force characteristic (r1937[1...10]) is identified in the range between the rated current (p0305) and the maximum current (p0640) (r1935[11...20]).

r1935[0...9] q inductance identification current / Lq I_ident

VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)

Can be changed: -	**Calculated:** -	**Access level:** 4
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Motor identification	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
- [Arms]	- [Arms]	- [Arms]

Description: Displays the identification current to identify the q inductance ([0...9]).

Dependency: Refer to: r1934, p1959, p1960

Note: The Lq characteristic consists of the value pairs from r1934 and r1935 with the same index.

r1936 Magnetizing inductance identified / L_H ident

SERVO, SERVO_AC, SERVO_I_AC

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Motor identification	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
- [mH]	- [mH]	- [mH]

Description: Displays the identified magnetizing inductance(gamma equivalent circuit diagram).

Dependency: Refer to: p1909, p1910, r1913, r1915, r1927, p1959, p1960, r1962, r1963

Note: This value corresponds to the value of the transformed magnetizing inductance (r0382).

r1937[0...10] Torque constant identified / kT ident

SERVO, SERVO_AC, SERVO_I_AC

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Motor identification	**Unit group:** 28_1	**Unit selection:** p0100
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
- [Nm/A]	- [Nm/A]	- [Nm/A]

Description: Displays the identified torque constant/torque characteristic over the q current.

Index:
[0] = Torque constant identified
[1] = Torque characteristic identified measuring point 1
[2] = Torque characteristic identified measuring point 2
[3] = Torque characteristic identified measuring point 3
[4] = Torque characteristic identified measuring point 4
[5] = Torque characteristic identified measuring point 5
[6] = Torque characteristic identified measuring point 6
[7] = Torque characteristic identified measuring point 7

[8] = Torque characteristic identified measuring point 8
[9] = Torque characteristic identified measuring point 9
[10] = Torque characteristic identified measuring point 10

Dependency: Refer to: r1938, r1939, p1959, p1960, r1969

Note: - the value in r1937[0] corresponds to the torque constant (p0316) and was identified with the current in r1935[10]. If the reluctance torque is identified (p1959.7 = 1), the torque constant is identified with 150% rated current (p0305), otherwise with 100% rated current.

- if indices r1937[1...10] are not equal to zero, they show the values of the torque characteristic identified for the current in r1935[11...20]. The torque characteristic is identified in the range between rated current (p0305) and maximum current (p0640).

r1937[0...10] Force constant identified / kT ident

SERVO (Lin), SERVO_AC (Lin), SERVO_I_AC (Lin)

Can be changed: -	**Calculated:** -	**Access level:** 3

	Min	**Max**	**Factory setting**
	- [A]	- [A]	- [A]

Description: The identified characteristic of the voltage emulation error is displayed r1950[0...19] and r1951[0...19].

Dependency: Refer to: r1950

p1952[0...n] Voltage emulation error final value / U_error final val

SERVO (Ext M_ctrl), SERVO_AC (Ext M_ctrl), SERVO_I_AC (Ext M_ctrl)	**Can be changed:** T	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** -
	P-Group: Motor identification	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0.000 [V]	100.000 [V]	0.000 [V]

Description: Sets the final value to compensate the voltage emulation error.

Dependency: Refer to: p1953

Note: The voltage emulation error is calculated and compensated for every phase according to the following formula:

u_error = u0 * i / (abs(i) + i0)

u0: This is set in p1952.

i0: This is set in p1953.

i: Phase current to which the emulation error u_error belongs.

For p1954 not equal to zero, p1952 refers to a pulse frequency of 4 kHz and a DC link voltage of 600V. Changes to the DC link voltage and pulse frequency are then automatically adapted, and the formula is as follows:

u_error = p1954 + p1952 * i / (abs(i) + p1953 * 600 V/r0070) * r1801/4 kHz * r0070/600 V

p1953[0...n] Voltage emulation error current offset / U_error I_offset

SERVO (Ext M_ctrl), SERVO_AC (Ext M_ctrl), SERVO_I_AC (Ext M_ctrl)

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** -
P-Group: Motor identification	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.000 [A]	100.000 [A]	0.000 [A]

Description: Sets the current offset to compensate the voltage emulation error.

Dependency: Refer to: p1952

Note: The voltage emulation error is calculated and compensated for every phase according to the following formula:

u_error = u0 * i / (abs(i) + i0)

u0: This is set in p1952.

i0: This is set in p1953.

i: Phase current to which the emulation error u_error belongs.

For p1954 not equal to zero, p1952 refers to a DC link voltage of 600V, and the formula is.

u_error = p1954 + p1952 * i / (abs(i) + p1953 * 600 V/r0070) * r1801/4 kHz * r0070/600 V

p1954[0...n] Voltage emulation error semiconductor voltage / U_error U_semi

SERVO (Ext M_ctrl), SERVO_AC (Ext M_ctrl), SERVO_I_AC (Ext M_ctrl)

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** -
P-Group: Motor identification	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-10.000 [V]	10.000 [V]	0.000 [V]

Description: Sets the semiconductor voltage drop to compensate the voltage emulation error.

The value is determined with the motor data identification routine (p1910).

Note: The voltage emulation error is calculated and compensated for every phase according to the following formula:

For p1954 = 0:

u_error = p1952 * i / (abs(i) + p1953)

For p1954 > 0:

u_error = p1954 + p1952 * i / (abs(i) + p1953 * 600 V/r0070) * r1801/4 kHz * r0070/600 V

i: Phase current to which the emulation error u_error belongs.

p1955[0...3] Valve identification voltage / Valve ident U

HLA

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Motor identification	**Unit group:** -	**Unit selection:** -

Min	**Max**	**Factory setting**
0.00 [V]	10.00 [V]	[0] 0.00 [V] [1] 10.00 [V] [2] 2.00 [V] [3] 2.00 [V]

Description: Sets the voltage to identify the valve characteristic.

Index:
[0] = Measuring range start
[1] = Measuring range end
[2] = Travel positive
[3] = Travel negative

Dependency: Refer to: p1956, p1957, p1958, p1960, p1961, r1961, r1962

Note: The characteristic is measured with a positive and negative voltage in the range of p1955[0] to p1955[1].

To move to a suitable starting position, either p1955[2] or -p1955[3] is used.

p1956[0...1] Valve identification measuring distance / Valve ident dist

HLA

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Motor identification	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.0 [%]	100.0 [%]	[0] 10.0 [%] [1] 90.0 [%]

Description: Sets the range for the maximum measuring distance for valve identification.

Index:
[0] = Minimum
[1] = Maximum

Dependency: Refer to: p1955, p1957, p1958, p1960, p1961, r1961, r1962

Note: The parameter is referred to the maximum valve stroke (p0313).

The values are only effective when the piston position is known (r1407.3 = 1).

p1957[0...1] Valve identification measured value / Valve ident val

HLA

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** -
P-Group: Motor identification	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	1000	[0] 100 [1] 4

Description: Sets the measured value for valve identification.

Index:
[0] = Number
[1] = Standstill identification encoder pulses

Dependency: Refer to: p1955, p1956, p1958, p1960, p1961, r1961, r1962

Note: For index [0]:

The entered value is used for the positive and negative ranges.

For index [1]:

Standstill is identified if these encoder pulses are not passed within the standstill monitoring time.

p1958[0...4] Valve identification time / Valve ident t

HLA

Can be changed: U, T	**Calculated:** -	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Motor identification	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.00 [s]	100.00 [s]	[0] 0.10 [s] [1] 0.10 [s] [2] 0.10 [s] [3] 4.00 [s] [4] 4.00 [s]

Description: Sets the times for valve identification.

Index:
[0] = Ramp time
[1] = Settling time
[2] = Measuring time
[3] = Standstill time
[4] = Wait time

Dependency: Refer to: p1955, p1956, p1957, p1960, p1961, r1961, r1962

Note: For index [0]:
In this time, the voltage is changed from 0 ... 10 V. The ramp time is effective for all voltage changes.
For index [1]:
After the target voltage has been reached, the system waits this time before the measurement is started.
For index [2]:
The velocity is averaged within this time.
For index [3]:
If there is no motion, time before the next measurement is made.
For index [4]:
Time between 2 measurements in order to fill the pressure accumulator. The value applies for the maximum velocity, and is internally reduced depending on the velocity.

p1958[0...n] Rotating measurement ramp-up/ramp-down time / Rot meas t_r up/dn

SERVO, SERVO_AC, SERVO_I_AC

Can be changed: T	**Calculated:** -	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Func. diagram:** -
P-Group: Motor identification	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-1.00 [s]	999999.00 [s]	-1.00 [s]

Description: Sets the ramp-up/ramp-down time for the rotating measurement.
The following applies for negative values:
When the function module "extended setpoint channel" is activated (r0108.8 = 1), the maximum of the ramp-up/ramp-down time of the setpoint channel becomes effective. When this function module is inactive, then no ramp-up/ramp-down time is effective.
The following applies for positive values:
The selected ramp-up/ramp-down time becomes effective.

Recommendation: A ramp-up/ramp-down time should not be activated for the motor data identification (p1958 = 0) as long as this can be safely done without incurring any danger. This means that the identification is complete and more accurate. When the ramp-up/ramp-down time is activated, the following steps of the rotating motor data identification are not executed:
- p1959.5 (identifying the q inductance)
- p1959.7 (identifying the reluctance torque constant)

Dependency: Refer to: p1959, p1960

p1958[0...n] Moving measurement ramp-up/ramp-down time / Mov meas t_r up/dn

SERVO (Lin), SERVO_AC (Lin), SERVO_I_AC (Lin)

Can be changed: T	**Calculated:** -	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Func. diagram:** -
P-Group: Motor identification	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-1.00 [s]	999999.00 [s]	-1.00 [s]

Description: Sets the ramp-up/ramp-down time for the moving measurement.
The following applies for negative values:
When the function module "extended setpoint channel" is activated (r0108.8 = 1), the maximum of the ramp-up/ramp-down time of the setpoint channel becomes effective. When this function module is inactive, then no ramp-up/ramp-down time is effective.
The following applies for positive values:
The selected ramp-up/ramp-down time becomes effective.

Recommendation: A ramp-up/ramp-down time should not be activated for the motor data identification (p1958 = 0) as long as this can be safely done without incurring any danger. This means that the identification is complete and more accurate. When the ramp-up/ramp-down time is activated, the following steps of the moving motor data identification are not executed:
- p1959.5 (identifying the q inductance)
- p1959.7 (identifying the reluctance force constant)

Dependency: Refer to: p1959, p1960

p1959[0...n] Data identification moving configuration / Dat_id mov config

HLA	**Can be changed:** U, T	**Calculated:** CALC_MOD_ALL	**Access level:** 2
	Data type: Unsigned16	**Dyn. index:** DDS, p0180	**Func. diagram:** -
	P-Group: Motor identification	**Unit group:** -	**Unit selection:** -
	Not for motor type: REL	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	-	-	0000 0001 0011 1111 bin

Description: Sets the configuration for data identification with movement.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Control sense correction	Yes	No	-
01	Valve offset correction	Yes	No	-
02	Automatic piston calibration	Yes	No	-
03	Automatic traversing range detection	Yes	No	-
04	Automatic characteristic identification	Yes	No	-
05	Stiction forces	Yes	No	-
08	System pressure correction for characteristic identification	Yes	No	-

Dependency: Refer to: F07988

Notice: To permanently accept the determined settings they must be saved in a non-volatile fashion (p0971, p0977).

Note: For bit 00:

In order to automatically correct the control sense for the velocity controller, the complete traversing distance must be free. When required, p1820 is automatically adapted.

For bit 01:

The drive moves to correct the valve offset. When required, p1832 is automatically adapted.

For bit 02:

Full automatic piston calibration, the drive must either be referenced, or must be equipped with an absolute encoder. Further, the complete traversing distance must be free.

For piston calibration, the drive is traversed to the end stop (completely inserted) with a negative search voltage (p1955[3]) and the associated absolute position entered in p0476.

For bit 03:

For automatic traversing range identification, the drive must either be referenced (homed), or must be equipped with an absolute encoder. Further, the piston must have been calibrated and the complete traversing distance must be free.

To prepare for the identification of the characteristic, the possible traversing range is determined. To do this, the drive is traversed to the right-hand and left-hand end stops with the search voltage (p1955[3...4]) and the position with distance reserve is entered into p1956.

If there are pressure sensors, then the correct interconnection for pressure measurements A and B is checked.

For bit 04:

For automatic characteristic identification, the drive must either be referenced (homed), or must be equipped with an absolute encoder. Further, the piston must have been calibrated and the free traversing range must have been entered in p1956.

The drive traverses with different valve voltages and takes into account p1958.

For bit 05:

The drive is moved with a positive and negative velocity, and the measured stiction forces are entered into p1555 and p1556.

For bit 06:

The drive is traversed to both end stops. In so doing, the dead volume and the loop gain of the force control loop is measured, and entered into p0314 and p0315.

For bit 08:

For the automatic characteristic identification (p1959.4), the measured velocity with the measured system pressure is converted to the average system pressure; this means that system pressure fluctuations hardly influence the measurement. The system pressure as well as pressures A and B must be measured. The conversion is not performed if the pressure measurements are not available. If the pressure measurements do not measure the specified pressures, then the conversion must be deactivated in order to avoid any errors.

p1959[0...n] Rotating measurement configuration / Rot meas config

SERVO, SERVO_AC, SERVO_I_AC

Can be changed: T	**Calculated:** CALC_MOD_ALL	**Access level:** 3
Data type: Unsigned16	**Dyn. index:** MDS, p0130	**Func. diagram:** -
P-Group: Motor identification	**Unit group:** -	**Unit selection:** -
Not for motor type: REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0000 1110 1110 0111 bin

Description: Sets the configuration of the rotating measurement.

Recommendation: A direction inhibit should not be activated for the rotating measurement (p1959.14 = 1 and p1959.15 = 1) as long as this can be done without incurring any danger. This means that the identification is complete and more accurate.

When the direction inhibit is activated, the reluctance torque constant (p1959.7) is not identified and the angular commutation offset (p1959.10, p0431) is inaccurately determined.

The reluctance torque constant (p1959.7) is also not identified in encoderless operation.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Identify periodic position error	Yes	No	-
01	Identify the saturation characteristic	Yes	No	-
02	Identify the moment of inertia	Yes	No	-
05	Identify the q inductance	Yes	No	-
06	Identify the torque constant	Yes	No	-
07	Identify the reluctance torque constant	Yes	No	-
08	Identify the q inductance at the test stand	Yes	No	-
09	Identify the magnetizing current / magnetizing inductance	Yes	No	-
10	Identify the commutation angle and direction of rotation	Yes	No	-
11	Identify rotor resistance	Yes	No	-
14	Positive direction permitted	Yes	No	-
15	Negative direction permitted	Yes	No	-

Dependency: Refer to: p1958, p1960

Notice: The step p1959.8 (identify q inductance on the test stand) may only be selected if the drive can be kept at zero speed or at a fixed speed either using a test stand or other mechanical measures.

During steps p1959.2 (identifying the moment of inertia) and p1959.6 (identifying the torque constant) the Vdc_min controller is disabled (p1240).

During step p1959.7 (identifying the reluctance torque constant) the Vdc_min controller and Vdc_max controller are disabled (p1240).

Note: For an induction motor (ASM), the following bits 1, 2, 5, 8, 9, 10, 14, 15 are effective

For a synchronous motor (SRM), the following bits 2, 5, 6, 7, 8, 10, 14, 15 are effective

For bit 00:

This function is only active when the "Cogging torque compensation" function module is activated (r0108.22 = 1). The motor should not be operated with any mounted load.

For bit 05:

For "motor holding brake the same as sequence control" (p1215 = 1 or 3), the Lq characteristic is only measured up to approximately the rated motor current (p0305) instead of up to the current limit (p0640). Before carrying out the rotation measurement for motors with brake, the brake should be opened (p1215 = 2) - as long as this can be done without incurring any danger.

For bit 10:

If the motor holding brake is set just the same as the sequence control (p1215 = 1 or 3), the commutation angle and the direction of rotation are not measured. Before carrying out the rotation measurement for motors with brake, the brake should be opened (p1215 = 2) - as long as this can be done without incurring any danger.

For bit 14, 15:

The following applies for bit 14 and 15 = 0:

When the function module "extended setpoint channel" is activated (r0108.8 = 1), the direction inhibit of the setpoint channel becomes effective. No direction of inhibit is effective if the function module is inactive.

The following applies for minimum bit 14 = 1 or bit 15 = 1:

The direction inhibit set in p1959 becomes effective.

p1959[0...n] Moving measurement configuration / Mov meas config

SERVO (Lin), SERVO_AC (Lin), SERVO_I_AC (Lin)

Can be changed: T	**Calculated:** CALC_MOD_ALL	**Access level:** 3
Data type: Unsigned16	**Dyn. index:** MDS, p0130	**Func. diagram:** -

11	Identify rotor resistance	Yes	No	-
14	Positive direction permitted	Yes	No	-
15	Negative direction permitted	Yes	No	-

Dependency: Refer to: p1958, p1960

Notice: The step p1959.8 (identify q inductance on the test stand) may only be selected if the drive can be kept at zero speed or at a fixed velocity either using a test stand or other mechanical measures.

During steps p1959.2 (identifying the moment of inertia) and p1959.6 (identifying the force constant) the Vdc_min controller is disabled (p1240).

During step p1959.7 (identifying the reluctance force constant) the Vdc_min controller and Vdc_max controller are disabled (p1240).

Note: For an induction motor (ASM), the following bits 1, 2, 5, 8, 9, 10, 14, 15 are effective

For a synchronous motor (SRM), the following bits 2, 5, 6, 7, 8, 10, 14, 15 are effective

For bit 00:

This function is only active when the "Cogging torque compensation" function module is activated (r0108.22 = 1). The motor should not be operated with any mounted load.

For bit 05:

For "motor holding brake the same as sequence control" (p1215 = 1 or 3), the Lq characteristic is only measured up to approximately the rated motor current (p0305) instead of up to the current limit (p0640). Before carrying out the rotation measurement for motors with brake, the brake should be opened (p1215 = 2) - as long as this can be done without incurring any danger.

For bit 10:

If the motor holding brake is set just the same as the sequence control (p1215 = 1 or 3), the commutation angle and the direction of rotation are not measured. Before carrying out the rotation measurement for motors with brake, the brake should be opened (p1215 = 2) - as long as this can be done without incurring any danger.

For bit 14, 15:

The following applies for bit 14 and 15 = 0:

When the function module "extended setpoint channel" is activated (r0108.8 = 1), the direction inhibit of the setpoint channel becomes effective. No direction of inhibit is effective if the function module is inactive.

The following applies for minimum bit 14 = 1 or bit 15 = 1:

The direction inhibit set in p1959 becomes effective.

p1959[0...n] Rotating measurement configuration / Rot meas config

VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)

Can be changed: T	**Calculated:** CALC_MOD_ALL	**Access level:** 2
Data type: Unsigned16	**Dyn. index:** DDS, p0180	**Func. diagram:** -
P-Group: Motor identification	**Unit group:** -	**Unit selection:** -
Not for motor type: REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0000 0000 0001 1111 bin

Description: Sets the configuration of the rotating measurement.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Encoder test active	Yes	No	-
01	Saturation characteristic identification	Yes	No	-
02	Moment of inertia identification	Yes	No	-
03	Re-calculates the speed controller parameters	Yes	No	-
04	Speed controller optimization (vibration test)	Yes	No	-
05	q leakage inductance ident. (for current controller adaptation)	Yes	No	-
11	Do not change the controller parameters during the measurement	Yes	No	-
12	Measurement shortened	Yes	No	-
13	After measurement direct transition into operation	Yes	No	-
14	Calculate speed actual value smoothing time	Yes	No	-

Dependency: Refer to: F07988

Note: The encoder is only tested if the rotating measurement with encoder is selected (p1960 = 2).

The following parameters are influenced for the individual optimization steps:

Bit 00: None

Bit 01: p0320, p0360, p0362 ... p0369

Bit 02: p0341, p0342

Bit 03: p1400.0, p1458, p1459, p1460, p1462, p1463, p1470, p1472, p1496

Bit 04: Dependent on p1960

Bit 05: p0391, p0392, p0393, p1402.2 only for induction motors

p1960 = 1, 3: p1458, p1459, p1470, p1472, p1496, p1400.0

p1960 = 2, 4: p1458, p1459, p1460, p1462, p1496, p1461, p1463

The identification of the q leakage inductance can only be carried out for unloaded motors or motors with a low load (load approx. 30% below the rated motor torque). Only then is a current controller adaptation (p0391 ... p0393) parameterized if the q-leakage inductance under no-load conditions is at least 30 % higher than the total leakage inductance (p0356, p0358).

For bit 11 = 1:

Bits 02, 03, 04 no longer have any effect. It makes sense to set bit 11 if the speed controller and its adaptation were already set before the measurement.

For bit 12 = 1:

The selection only has an effect on the measurement p1960 = 1, 2. For the shortened measurement, the magnetizing current and moment of inertia are determined with a somewhat lower accuracy.

For bit 13 = 1:

After the measurement has been completed, the system immediately goes into closed-loop speed controlled operation.

p1960 Moving measurement selection / Mov meas sel

HLA

Can be changed: U, T	**Calculated:** -	**Access level:** 2
Data type: Integer16	**Dyn. index:** -	**Func. diagram:** -
P-Group: Motor identification	**Unit group:** -	**Unit selection:** -
Not for motor type: REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-3	1	0

Description: Activates the moving measurement.

Value:
-3: Accept identified Ch parameters
-1: Start data identification without Ch transfer
0: Inactive/cancel
1: Start data identification with transfer

Dependency: Refer to: p1955, p1956, p1957, p1958, p1961, r1961, r1962

Refer to: F07990, A07991, F07993

Notice: The drive moves after data identification with movement has been activated and enabled. In this case the force limiting is not active.

If it is not permissible that the complete traversing range is traversed, then the following must be executed before the start:

- deselect automatic traversing range detection (p1959.3 = 0).
- deselect automatic piston calibration (p1959.2 = 0).
- calibrate the piston manually.
- manually enter the traversing range limits (p1956).

For the identification of the characteristic (p1959.4), the velocities are traversed up to the maximum velocity, depending on the setting in p1955[0...1].

p1960 Rotating measurement selection / Rot meas sel

SERVO, SERVO_AC, SERVO_I_AC

Can be changed: T	**Calculated:** -	**Access level:** 2
Data type: Integer16	**Dyn. index:** -	**Func. diagram:** -
P-Group: Motor identification	**Unit group:** -	**Unit selection:** -
Not for motor type: REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-3	1	0

Description: Activates the rotating measurement.

Value:
-3: Accept identified parameters
-2: Acknowledge encoder inversion actual value (F07993)
-1: Start motor data identification without acceptance
0: Inactive/inhibit
1: Start motor data identification with acceptance

Recommendation: Before carrying out the rotation measurement for motors with brake, the brake should be opened (p1215 = 2) - as long as this can be done without incurring any danger. The commutation angle and the direction are also determined.

Motor data identification is not required for catalog motors and DRIVE-CLiQ motors. It is recommended to increase the torque accuracy or for third-party motors.

Dependency: Refer to: r1934, r1935, r1936, r1937, r1938, r1939, r1947, r1948, p1958, p1959, r1962, r1963, r1969

Refer to: F07990, A07991, F07993

Danger: For the rotating measurement, the motor is accelerated up to the maximum speed. Only the parameterized current limit (p0640) and the maximum speed (p1082) are effective.

The behavior of the motor can be influenced using the direction inhibit (p1959.14, p1959.15) and the ramp-up/ramp-down time (p1958).

Notice: If there is a motor holding brake, it must be open (p1215 = 2).

To permanently accept the determined settings they must be saved in a non-volatile fashion (p0971, p0977).

Note: The rotating measurement can only be selected when the pulses of all of the drive objects of the Control Unit have been suppressed. After selection, all of the other drive objects of the Control Unit are interlocked so that they cannot be switched on until the rotating measurement has been completed or de-selected.

When the rotating measurement is activated (p1960 = 1), it is not possible to save the parameters (p0971, p0977).

p1960 Moving measurement selection / Mov meas sel

SERVO (Lin), SERVO_AC (Lin), SERVO_I_AC (Lin)

p1960 Rotating measurement selection / Rot meas sel

VECTOR, VECTOR_AC, VECTOR_I_AC

Can be changed: T	**Calculated:** -	**Access level:** 2
Data type: Integer16	**Dyn. index:** -	**Func. diagram:** -
P-Group: Motor identification	**Unit group:** -	**Unit selection:** -
Not for motor type: REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	4	0

Description: Sets the rotating measurement.

The rotating measurement is carried out after the next switch-on command.

The setting possibilities of the parameter depend on the open-loop/closed-loop control mode (p1300).

p1300 < 20 (U/f open-loop control):

It is not possible to select rotating measurement or speed controller optimization.

p1300 = 20, 22 (encoderless operation):

Only rotating measurement or speed controller optimization can be selected in the encoderless mode.

p1300 = 21, 23 (operation with encoder):

Both versions (encoderless and with encoder) of the rotating measurement and speed controller optimization can be selected.

Value:
0: Inhibited
1: Rotating measurement in encoderless operation
2: Rotating measurement with encoder
3: Speed controller optimization in encoderless operation
4: Speed controller optimization with encoder

Dependency: Before the rotating measurement is carried out, the motor data identification routine (p1900, p1910, r3925) should have already been done.

In the simulation mode, a value of 1 cannot be written into the parameter.

When selecting the rotating measurement, the drive data set changeover is suppressed.

When selecting rotating measurement (with the exception for p1959.13 = 1) the following BICO parameters are set to standard values, and after the measurement has been completed, are reset back to the original parameter assignments:

p1020 ... p1023, p1070, p1075, p1138, p1139, p1140 ... p1143, p1155, p1160, p1437, p1476, p1477

Refer to: p1272, p1300, p1900, p1959, p1967, r1968

Refer to: A07987

Danger: For drives with a mechanical system that limits the distance moved, it must be ensured that this is not reached during the rotating measurement. If this is not the case, then it is not permissible that the measurement is carried out.

Notice: If there is a motor holding brake, it must be open (p1215 = 2).

To permanently accept the determined settings they must be saved in a non-volatile fashion (p0971, p0977).

During the rotating measurement it is not possible to save the parameters (p0971, p0977).

Note: When the rotating measurement is activated, it is not possible to save the parameters (p0971, p0977).

Parameter changes are automatically made for the rotating measurement (e.g. p1120); this is the reason that up to the end of the measurement, and if no faults are present, no manual changes should be made.

The ramp-up and ramp-down times (p1120, p1121) are limited, for the rotating measurement, to 900 s.

For speed controller optimization with encoder (p1960 = 2, 4), the speed controller for encoderless operation is also pre-assigned (p1470, p1472).

Depending on whether the speed controller optimization is carried out with or without encoder, different Kp/Tn adaptations of the speed controller are set (p1464, p1465). If the drive should be controlled with as well as without speed encoder, then we recommend the use of two drive data sets (p0180). These can then be executed with different speed controller adaptations.

r1961[0...511] Valve identification voltage characteristic / Valve ID char U

HLA

Can be changed: -	**Calculated:** -	**Access level:** 3

Not for motor type: PMSM, REL, RESM	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
- [%]	- [%]	- [%]

Description: Displays the rotor flux values of the identified saturation characteristic.

After they have been determined, the values are transferred to p0362 ... p0365.

Index:
[0] = Value 1
[1] = Value 2
[2] = Value 3
[3] = Value 4
[4] = Value 5

p1965	**Speed_ctrl_opt speed / n_opt speed**		
VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	**Can be changed:** U, T	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
	P-Group: Motor identification	**Unit group:** -	**Unit selection:** -
	Not for motor type: REL	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	10 [%]	75 [%]	40 [%]

Description: Sets the speed for the identification of the moment of inertia and the vibration test.

Induction motor:

The percentage value is referred to p0310 (rated motor frequency).

Synchronous motor:

The percentage value is referred to the minimum from p0310 (rated motor frequency) and p1082 (maximum speed).

Dependency: Refer to: p0310, p1959

Refer to: F07984, F07985

Note: In order to calculate the inertia, sudden speed changes are carried out - the specified value corresponds to the lower speed setpoint. This value is increased by 20 % for the upper speed value.

The q leakage inductance (refer to p1959.5) is determined at zero speed and at 50 % of p1965 - however, with a maximum output frequency of 15 Hz and at a minimum of 10% of the rated motor speed.

p1967	**Speed_ctrl_opt dynamic factor / n_opt dyn_factor**		
VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	**Can be changed:** U, T	**Calculated:** CALC_MOD_ALL	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
	P-Group: Motor identification	**Unit group:** -	**Unit selection:** -
	Not for motor type: REL	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	1 [%]	400 [%]	100 [%]

Description: Sets the dynamic response factor for speed controller optimization.

After optimization, the dynamic response achieved is displayed in r1968.

Dependency: Refer to: p1959, r1968

Refer to: F07985

Note: For a rotating measurement, this parameter can be used to optimize the speed controller.

p1967 = 100 % --> speed controller optimization according to a symmetric optimum.

p1967 > 100 % --> optimization with a higher dynamic response (Kp higher, Tn lower).

If the actual dynamic response (see r1968) is significantly reduced with respect to the required dynamic response (p1967), then this can be as a result of mechanical load oscillations. If, in spite of this load behavior, a higher dynamic response is required, then the oscillation test (p1959.4 = 0) should be deactivated and the measurement repeated.

r1968	**Speed_ctrl_opt dynamic factor actual / n_opt dyn_fact act**		
VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	**Can be changed:** -	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
	P-Group: Motor identification	**Unit group:** -	**Unit selection:** -
	Not for motor type: REL	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	- [%]	- [%]	- [%]

Description: Displays the dynamic factor which is actually achieved for the vibration test

Dependency: Refer to: p1959, p1967

Refer to: F07985

Note: This dynamic factor only refers to the control mode of the speed controller set in p1960.

P-Group: Motor identification	**Unit group:** -	**Unit selection:** -
Not for motor type: REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the identified encoder pulse number/grid spacing.

For index [0]:

Rotating motors: Displays the identified encoder pulse number (per revolution).

Linear motors: Encoder pulse number per meter. Grid division = 1/p1973 [meter].

For index [1]:

Rotating motors: No significance.

Linear motors: Identified grid division in nm.

Index: [0] = Rotating motor encoder pulse number
[1] = Linear motor grid division in nm

Notice: Due to the measuring accuracy (approx. 5 %) only the approximate value is shown in p1973 and may not be directly transferred into p0407 or p0408. An incorrect pole pair number (r0313, p0314) or pole pair width (p0315) results in an incorrect value in p1973.

Note: A negative signal indicates an incorrect polarity of the encoder signal.

r1973 Rotating measurement encoder test pulse number determined / n_opt puls no. det

p1980[0...n] PolID technique / PolID technique

SERVO, SERVO_AC, SERVO_I_AC

Can be changed: U, T	**Calculated:** CALC_MOD_ALL	**Access level:** 3
Data type: Integer16	**Dyn. index:** MDS, p0130	**Func. diagram:** -
P-Group: Motor identification	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	99	99

Description: Sets the pole position identification technique.

Value:
0: Saturation-based 1st + 2nd harmonics
1: Saturation-based 1st harmonics
4: Saturation based 2-stage
10: Motion-based
20: Elasticity-based
99: No technique selected

Dependency: Refer to: p0325, p0329, p1981, p1982, p1983, r1984, r1985, r1986, r1987, p1990, r1992, p1993, p1994, p1995, p1996, p1997, p3090, p3091, p3092, p3093, p3094, p3095, p3096, r3097

Refer to: F07995

Notice: If the incorrect technique is applied, this can cause the motor to accelerate in an uncontrolled fashion.

Under the following conditions, the integral time must be disabled (p1996 = 0):

- p1980 = 10 (motion-based)
- motor encoder with track A/B sq-wave (p0404.3 = 1)
- p0430.20 = 0 (flank time measurement)

Once the integral time has been disabled, the motion is increased during the identification (a minimum of 90 ° electrical). As a result of this, the maximum distance (p1981) must also be increased.

Note: PolID: Pole position identification

When commissioning a catalog motor, the technique is automatically selected depending on the motor type being used.

The following applies for 1FN3 motors:

A technique with 2nd harmonic may not be used (do not use p1980 = 0, 4).

For 1FK7 motors, the following applies:

A two-stage technique may not be used (do not use p1980 = 4).

The automatically set value in p0329 may not be changed.

p1980[0...n] PolID technique / PolID technique

VECTOR, VECTOR_AC, VECTOR_I_AC

Can be changed: U, T	**Calculated:** CALC_MOD_REG	**Access level:** 3
Data type: Integer16	**Dyn. index:** MDS, p0130	**Func. diagram:** -
P-Group: Motor identification	**Unit group:** -	**Unit selection:** -
Not for motor type: ASM	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
1	12	4

Description: Sets the pole position identification technique.

The current magnitudes are limited to the rated power unit values.

p1980 = 1, 8:

The current magnitude is set using p0329.

p1980 = 4, 6:

The current magnitude of the first measurement section is set using p0325, the second using p0329.

p1980 = 10:

The rated motor current is impressed to align.

p1980 = 12: The induced stator voltage is sensed using a VSM and evaluated. This rotor position identification technique can only be used for separately excited synchronous motors with incremental encoder.

Value:
1: Voltage pulsing 1st harmonics
4: Voltage pulsing 2-stage
6: Voltage pulsing 2-stage inverse
8: Voltage pulsing 2nd harmonic inverse
10: DC current injection
12: Rotor position sensing VSM for SESM with incremental encoder

Dependency: When commissioning a catalog motor, the technique is automatically selected depending on the motor type being used.

In the simulation mode, the parameter cannot be written into.

Refer to: p0325, p0329, p1272, p1780

Refer to: F07969

Note: For p1980 = 1, 4, 6, 8:

Voltage pulse technique cannot be applied to separately excited synchronous motors (p0300 = 5) and for for operation with sine-wave output filters (p0230).

For p1980 = 12:

This technique can only be applied for separately excited synchronous motors (SESM) with voltage measurement (VSM).

The rotor position identification technique (p1980 = 12) cannot be used for permanent-magnet synchronous motors.

p1981[0...n] PolID distance max / PolID distance max

SERVO, SERVO_AC, SERVO_I_AC

Can be changed: U, T	**Calculated:** CALC_MOD_ALL	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Func. diagram:** -

Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0 [°]	180 [°]	10 [°]

Description: Sets the maximum distance (electrical angle) when carrying out the pole position identification routine.

If this distance (travel) is exceeded, an appropriate fault is output.

Dependency: Refer to: p0325, p0329, p1980, p1982, p1983, r1984, r1985, r1986, r1987, p1990, r1992, p1993, p1994, p1995, p1996, p1997

Refer to: F07995

Notice: Value = 180 °: Monitoring is deactivated.

Note: PolID: Pole position identification

p1982[0...n] PolID selection / PolID selection

SERVO, SERVO_AC, SERVO_I_AC

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: Integer16	**Dyn. index:** MDS, p0130	**Func. diagram:** -
P-Group: Motor identification	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	2	0

Description: Activates the pole position identification routine to determine the commutation angle and to carry out a plausibility check.

Value:
0: Pole position identification off
1: Pole position identification for commutation
2: Pole position identification for plausibility check

Recommendation: For p1982 = 1:

This is used for synchronous motors with motor encoder without absolute data.

The information/data regarding the absolute commutation angle is supplied via a track C/D, Hall sensors, an absolute encoder or from the pole position identification routine.

For p1982 = 2:

This is used for synchronous motor with motor encoder with absolute data to check this data.

Dependency: Refer to: p0325, p0329, p1980, p1981, p1983, r1984, r1985, r1986, r1987, p1990, r1992, p1993, p1994, p1995, p1996, p1997, p3090, p3091, p3092, p3093, p3094, p3095, p3096, r3097

Note: PolID: Pole position identification

p1982[0...n] PolID selection / PolID selection

VECTOR, VECTOR_AC, VECTOR_I_AC

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: Integer16	**Dyn. index:** MDS, p0130	**Func. diagram:** -
P-Group: Motor identification	**Unit group:** -	**Unit selection:** -
Not for motor type: ASM, REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	2	0

Description: Activates the pole position identification routine to determine the commutation angle and to carry out a plausibility check.

Value:
0: Pole position identification off
1: Pole position identification for commutation
2: Pole position identification for plausibility check

Recommendation: For p1982 = 1:

This is used for synchronous motors with motor encoder without absolute data.

The information/data regarding the absolute commutation angle is supplied via a track C/D, Hall sensors, an absolute encoder or from the pole position identification routine.

For separately excited synchronous motors, the position identification is realized using the voltage measurement of a Voltage Sensing Module VSM (p1980 = 12). If there is no VSM then the setting is not possible.

For p1982 = 2:

This is used for synchronous motor with motor encoder with absolute data to check this data.

With p1982 = 2, each time the pulses are enabled it is checked whether the absolute position supplied from the encoder does not exceed a deviation of 45 degrees to the identified pole wheel position.

Not possible for separately excited synchronous motors.

Dependency: Refer to: p0325, p0329, p1980, p1981, p1983, r1984, r1985, r1986, r1987, p1990, r1992, p1993, p1994, p1995, p1996, p1997, p3090, p3091, p3092, p3093, p3094, p3095, p3096, r3097

Note: For encoderless operation, the pole position identification routine is selected with p1780.6

p1983 PolID test / PolID test

SERVO, SERVO_AC, SERVO_I_AC

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** -
P-Group: Motor identification	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	1	0

Description: Starts the pole position identification routine for test purposes.

p1983 = 1:

Start of pole position identification. The parameter is set to zero automatically on completion of the identification process.

Dependency: Refer to: p0325, p0329, p1980, p1981, p1982, r1984, r1985, r1986, r1987, p1990, r1992, p1993, p1994, p1995, p1996, p1997, p3090, p3091, p3092, p3093, p3094, p3095, p3096, r3097

Notice: For p1983 = 1 and if the pulses are not enabled, then the function is only executed the next time that the pulses are enabled.

Note: When this test is executed, it does not influence the commutation angle.

r1984 PolID angular difference / PolID ang diff

SERVO, SERVO_AC, SERVO_I_AC

Can be changed: -	**Calculated:** -	**Access level:** 3

Note: PolID: Pole position identification

The following information and data can be taken from the trigger characteristic.

- the value -100% marks the angle at the start of the measurement.
- the value +100 % marks the commutation angle determined from the pole position identification routine.

p1990 Encoder adjustment determine angular commutation offset / Enc_adj det ang

SERVO, SERVO_AC, SERVO_I_AC

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Integer16	**Dyn. index:** -	**Func. diagram:** -
P-Group: Motor identification	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	1	0

Description: This function is only required for synchronous motors and can be started when commissioning for the first time or after replacing an encoder.

The function acts on the active motor data set.

When adjusting the encoder, the angular commutation offset is determined and transferred into p0431.

Alarm A07971 is output while the angular commutation offset is being determined.

p1990 is automatically set to 0 after the angular commutation offset has been determined.

p1990 = 0: Deactivated

p1990 = 1: Activated with transfer

Dependency: Refer to: p0325, p0329, p0431, p1980, p1981, p1982, p1983, r1984, r1985, r1986, r1987, p1999

Refer to: A07971

Danger: For recommendation 3:

When performing this measurement there is a danger of coming into contact with system parts that are at a high (hazardous) electrical voltage.

This measurement may only be performed by authorized service personnel.

Warning: The motor can move in an uncontrolled fashion.

To determine the angular commutation offset, pulses must be immediately enabled after p1990 = 1. For commutation with a zero mark - or with distance-coded zero marks - the drive must also be traversed over the zero mark or over two zero marks. If a POWER ON is carried out before activating the pulse enable and where relevant before passing the zero mark, then after powering up p1990 = 0, and the commutation angle is not determined.

Notice: When the pulses are enabled, the function is immediately executed with p1990 = 1; otherwise, the next time that the pulses are enabled.

In order to prevent an incorrect orientation of the electrical pole position (uncontrolled motor movement), the automatically determined angular commutation offset (p0431) should, for reasons of safety, be checked using one of the following recommendations:

Recommendation 1:

Set encoderless operation (p1300 = 20 or p1404 = 0), de-select pole position identification (p1982 = 0), operate under no-load conditions with a speed > p1755, correct the actual value inversion (p0410.0) (e.g. r0061 = r0063), read the angular error in r1778; the result in r1778 should be approximately 0, for |r1778| > 2 degrees, add the value to p0431 - taking into account the sign - and enter in p0431.

Recommendation 2:

Set current limit to 0 (p0640 = 0), activate travel to fixed stop (p1545 = 1); record r0089[0] (phase voltage) and r0093 (pole position, electrically scaled), (e.g. trace) while the motor is being externally moved.

When doing this, the rising zero crossing of the phase voltage must coincide with the step 360 ° --> 0 ° from r0093.

Recommendation 3:

Measure phase voltage U (measure phase U with respect to a virtual neutral point created using 3 resistors) and r0093 (pole position, electrically scaled).

When doing this, the rising zero crossing of the phase voltage must coincide with the step 360 ° --> 0 ° from r0093.

Recommendation 4:

Determine the average value from several results of a pole position identification routine executed as test (p1983) at various electrical angles and add the value to p0431 - taking into account the sign and enter into p0431.

Note: If fault F07414 is present, the following applies:

First set p1990 to 1, then acknowledge the fault and then issue the enable signals.

p1990 Encoder adjustment determine angular commutation offset / Enc_adj det ang

VECTOR, VECTOR_AC, VECTOR_I_AC

Can be changed: T	**Calculated:** -	**Access level:** 2
Data type: Integer16	**Dyn. index:** -	**Func. diagram:** -
P-Group: Motor identification	**Unit group:** -	**Unit selection:** -
Not for motor type: ASM	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	3	0

Description: This function is only required for synchronous motors and can be started when commissioning for the first time or after replacing an encoder.

The function acts on the active motor data set.

Alarm A07971 is output while the angular commutation offset is being determined.

p1990 is automatically set to 0 after the angular commutation offset has been determined.

For p1990 = 1 (encoder adjustment with transfer), the following applies:

The angular commutation offset is determined and transferred into p0431.

For p1990 = 2 (encoder adjustment for checking), the following applies:

The angular commutation offset is determined and is not transferred into p0431. For a deviation of more than 6 ° electrical, fault F07413 is output.

For p1990 = 3 (encoder adjustment in operation), the following applies:

PolID procedure runs before the zero mark detection. The angular commutation offset is determined and transferred into p0431. A fine adjustment (p1905) is then optionally possible.

Value:
0: Deactivated
1: Activated with transfer
2: Activated for checking
3: Activates encoder adjustment in operation

Dependency: In the simulation mode, the parameter cannot be written into.

When selecting the encoder adjustment, the changeover of the drive data sets is suppressed.

Encoder adjustment is only carried out if the function module for "speed/torque control" is activated (r0108.2 = 1).

Refer to: p0325, p0329, p0431, p1272, p1900

Caution: When the encoder is being adjusted, the motor must be operated without a load - and if a motor holding brake is being used, this must be opened.

Min	**Max**	**Factory setting**
0.600 [m/min]	600.000 [m/min]	120.000 [m/min]

Description: Sets the reference quantity for velocity.

All velocities specified as relative value are referred to this reference quantity.

The reference quantity corresponds to 100% or 4000 hex (word) or 4000 0000 hex (double word).

Dependency: Refer to: p0500, p2001, p2002, p2003, r2004

Note: If a BICO interconnection is established between different physical quantities, then the particular reference quantities are used as internal conversion factor.

Example 1:

The signal of an analog input (e.g. r4055[0]) is connected to a velocity setpoint (e.g. p1155[0]). The actual percentage input value is cyclically converted into the absolute velocity setpoint using the reference velocity (p2000).

Example 2:

The setpoint from PROFIBUS (r2060[1]) is connected to a velocity setpoint (e.g. p1155[0]). The actual input value is cyclically converted into a percentage value via the pre-specified scaling 4000 0000 hex. This percentage value is converted to the absolute velocity setpoint via reference velocity (p2000).

p2000 Reference speed reference frequency / n_ref f_ref

SERVO, SERVO_AC, SERVO_I_AC

6.00 [rpm]	210000.00 [rpm]	3000.00 [rpm]

Description: Sets the reference quantity for speed and frequency.

All speeds or frequencies specified as relative value are referred to this reference quantity.

The reference quantity corresponds to 100% or 4000 hex (word) or 4000 0000 hex (double word).

Dependency: Refer to: p2001, p2002, p2003, r2004

Note: For the automatic calculation (p0340 = 1, p3900 > 0) an appropriate pre-assignment is only made if the parameter is not inhibited from being overwritten using p0573 = 1.

If a BICO interconnection is established between different physical quantities, then the particular reference quantities are used as internal conversion factor.

Example 1:

The signal of an analog input (e.g. r4055[0]) is connected to a speed setpoint (e.g. p1070[0]). The actual percentage input value is cyclically converted into the absolute speed setpoint using the reference speed (p2000).

Example 2:

The setpoint from PROFIBUS (r2050[1]) is connected to a speed setpoint (e.g. p1070[0]). The actual input value is cyclically converted into a percentage value via the pre-specified scaling 4000 hex. This percentage value is converted to the absolute speed setpoint via reference speed (p2000).

p2000 Reference speed reference frequency / n_ref f_ref

ENC

Min	**Max**	**Factory setting**
0.60 [m/min]	600.00 [m/min]	120.00 [m/min]

Description: Sets the reference quantity for velocity and frequency.

All velocities or frequencies specified as relative value are referred to this reference quantity.

The reference quantity corresponds to 100% or 4000 hex (word) or 4000 0000 hex (double word).

The following applies: Reference frequency (in Hz) = reference velocity (in (m/min) / 60)

Note: If a BICO interconnection is established between different physical quantities, then the particular reference quantities are used as internal conversion factor.

p2001 Reference voltage / Reference voltage

HLA

Can be changed: T	**Calculated:** CALC_MOD_ALL	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Communications	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
10 [V]	100000 [V]	1000 [V]

Description: Sets the reference quantity for voltages.

All voltages specified as relative value are referred to this reference quantity. This also applies for direct voltage values (= rms value) like the DC link voltage.

The reference quantity corresponds to 100% or 4000 hex (word) or 4000 0000 hex (double word).

Note: If a BICO interconnection is established between different physical quantities, then the particular reference quantities are used as internal conversion factor.

p2001 Reference voltage / Reference voltage

SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, A_INF, S_INF, R_INF, B_INF, TM41

Can be changed: T	**Calculated:** CALC_MOD_ALL	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Communications	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
10 [Vrms]	100000 [Vrms]	1000 [Vrms]

Description: Sets the reference quantity for voltages.

All voltages specified as relative value are referred to this reference quantity. This also applies for direct voltage values (= rms value) like the DC link voltage.

The reference quantity corresponds to 100% or 4000 hex (word) or 4000 0000 hex (double word).

Note:

This reference quantity also applies to direct voltage values. It is not interpreted as rms value, but as DC voltage value.

Note: For the automatic calculation (p0340 = 1, p3900 > 0) an appropriate pre-assignment is only made if the parameter is not inhibited from being overwritten using p0573 = 1.

If a BICO interconnection is established between different physical quantities, then the particular reference quantities are used as internal conversion factor.

For infeed units, the parameterized device supply voltage (p0210) is pre-assigned as the reference quantity.

Example:

The actual value of the DC link voltage (r0070) is connected to a test socket (e.g. p0771[0]). The actual voltage value is cyclically converted into a percentage of the reference voltage (p2001) and output according to the parameterized scaling.

p2002 Reference pressure / p_ref

HLA

Can be changed: T	**Calculated:** CALC_MOD_ALL	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Communications	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.10 [bar]	5000.00 [bar]	100.00 [bar]

Description: Sets the reference quantity for pressures.

All pressures specified as relative value are referred to this reference quantity.

The reference quantity corresponds to 100% or 4000 hex (word) or 4000 0000 hex (double word).

Notice: If various DDS are used with different valve/cylinder data, then the reference quantities remain the same as these are not changed over with the DDS. The resulting conversion factor should be taken into account (e.g. for BICO interconnections).

Note: If a BICO interconnection is established between different physical quantities, then the particular reference quantities are used as internal conversion factor.

p2002 Reference current / I_ref

SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, A_INF, S_INF, R_INF, B_INF, TM41

Can be changed: T	**Calculated:** CALC_MOD_ALL	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Communications	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.10 [Arms]	100000.00 [Arms]	100.00 [Arms]

Description: Sets the reference quantity for currents.

All currents specified as relative value are referred to this reference quantity.

The reference quantity corresponds to 100% or 4000 hex (word) or 4000 0000 hex (double word).

Notice: If various DDS are used with different motor data, then the reference quantities remain the same as these are not changed over with the DDS. The resulting conversion factor should be taken into account (e.g. for trace records).

Example:

p2002 = 100 A

Reference quantity 100 A corresponds to 100 %

p0305[0] = 100 A

Rated motor current 100 A for MDS0 in DDS0 --> 100 % corresponds to 100 % of the rated motor current

p0305[1] = 50 A

Rated motor current 50 A for MDS1 in DDS1 --> 100 % corresponds to 200 % of the rated motor current

Note: For the automatic calculation (p0340 = 1, p3900 > 0) an appropriate pre-assignment is only made if the parameter is not inhibited from being overwritten using p0573 = 1.

SERVO:

Pre-assigned value for p0338 > 0.001 is p0338, otherwise 2 * p0305.

VECTOR:

Pre-assigned value is p0640.

If a BICO interconnection is established between different physical quantities, then the particular reference quantities are used as internal conversion factor.

For infeed units, the rated line current, which is obtained from the rated power and parameterized rated line supply voltage (p2002 = r0206 / p0210 / 1.73) is pre-assigned as the reference quantity.

Example:

The actual value of a phase current (r0069[0]) is connected to a test socket (e.g. p0771[0]). The actual current value is cyclically converted into a percentage of the reference current (p2002) and output according to the parameterized scaling.

p2003 Reference force / F_ref

HLA

Can be changed: T	**Calculated:** CALC_MOD_ALL	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Communications	**Unit group:** 8_2	**Unit selection:** p0505
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.01 [N]	20000000.00 [N]	100.00 [N]

Description: Sets the reference quantity for forces.

All forces specified as relative value are referred to this reference quantity.

The reference quantity corresponds to 100% or 4000 hex (word) or 4000 0000 hex (double word).

Note: For the automatic calculation (p0340 = 1, p3900 > 0) an appropriate pre-assignment is only made if the parameter is at the factory setting.

If a BICO interconnection is established between different physical quantities, then the particular reference quantities are used as internal conversion factor.

Example:

The actual value of the total force (r0079[0]) is connected to a test socket (e.g. p0771[0]). The actual force is cyclically converted into a percentage of the reference force (p2003) and output according to the parameterized scaling.

p2003 Reference torque / M_ref

SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, TM41

Can be changed: T	**Calculated:** CALC_MOD_ALL	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -

Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.01 [Nm]	20000000.00 [Nm]	1.00 [Nm]

Description: Sets the reference quantity for torque.

All torques specified as relative value are referred to this reference quantity.

The reference quantity corresponds to 100% or 4000 hex (word) or 4000 0000 hex (double word).

Note: For the automatic calculation (p0340 = 1, p3900 > 0) an appropriate pre-assignment is only made if the parameter is not inhibited from being overwritten using p0573 = 1.

SERVO:

Pre-assigned value for p0338 and p0334 > 0.001 is p0338 * p0334, otherwise 2 * p0333.

VECTOR:

Pre-assigned value is 2 * p0333.

If a BICO interconnection is established between different physical quantities, then the particular reference quantities are used as internal conversion factor.

Example:

The actual value of the total torque (r0079) is connected to a test socket (e.g. p0771[0]). The actual torque is cyclically converted into a percentage of the reference torque (p2003) and output according to the parameterized scaling.

p2003 Reference force / Reference force

SERVO (Lin), SERVO_AC (Lin), SERVO_I_AC (Lin)

Can be changed: T	**Calculated:** CALC_MOD_ALL	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Communications	**Unit group:** 8_2	**Unit selection:** p0505

Min	**Max**	**Factory setting**
0.01 [N]	20000000.00 [N]	100.00 [N]

Description: Sets the reference quantity for forces.

All forces specified as relative value are referred to this reference quantity.

The reference quantity corresponds to 100% or 4000 hex (word) or 4000 0000 hex (double word).

Note: For the automatic calculation (p0340 = 1, p3900 > 0) an appropriate pre-assignment is only made if the parameter is at the factory setting.

Pre-assigned value for p0338 and p0334 > 0.001 is p0338 * p0334, otherwise 2 * p0333.

If a BICO interconnection is established between different physical quantities, then the particular reference quantities are used as internal conversion factor.

Example:

The actual value of the total force (r0079[0]) is connected to a test socket (e.g. p0771[0]). The actual force is cyclically converted into a percentage of the reference force (p2003) and output according to the parameterized scaling.

r2004 Reference power / P_ref

HLA

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Communications	**Unit group:** 14_10	**Unit selection:** p0505
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
- [kW]	- [kW]	- [kW]

Description: Displays the reference quantity for power.

All power ratings specified as relative value are referred to this reference quantity.

The reference quantity corresponds to 100% or 4000 hex (word) or 4000 0000 hex (double word).

Dependency: This value is calculated as follows:

Calculated from the torque x speed (rotating) or from the force x velocity (linear).

Refer to: p2000, p2001, p2002, p2003

Note: If a BICO interconnection is established between different physical quantities, then the particular reference quantities are used as internal conversion factor.

The reference power is calculated as follows:

- 2 * Pi * reference speed / 60 * reference torque (rotating)
- reference velocity / 60*reference force (linear)

r2004 Reference power / P_ref

SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, A_INF, S_INF, R_INF, B_INF, TM41

Can be changed: -	**Calculated:** -	**Access level:** 3

p2020 Field bus interface baud rate / Field bus baud

CU_S_AC_DP, CU_S120_DP, CU_S150_DP

Can be changed: T	**Calculated:** -	**Access level:** 2
Data type: Integer16	**Dyn. index:** -	**Func. diagram:** -
P-Group: Communications	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
4	8	8

Description: Sets the baud rate for the fieldbus interface USS.

Value:
4: 2400 baud
5: 4800 baud
6: 9600 baud
7: 19200 baud
8: 38400 baud

Note: Fieldbus IF: Fieldbus interface

Changes only become effective after POWER ON.

The parameter is not influenced by setting the factory setting.

The parameter is set to the factory setting when the protocol is reselected.

p2021 Field bus interface address / Field bus address

CU_S_AC_DP, CU_S120_DP, CU_S150_DP

Can be changed: T	**Calculated:** -	**Access level:** 2
Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** -
P-Group: Communications	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	31	0

Description: Displays or sets the address for the fieldbus interface USS.

The address can be set as follows:

1) Using the address switch on the Control Unit.

--> p2021 displays the address setting.

--> A change only becomes effective after a POWER ON.

2) Using p2021

--> Only if an address of 0 or an address that is invalid for the fieldbus selected in p2030 has been set using the address switch.

--> The address is saved in a non-volatile fashion using the function "copy from RAM to ROM".

--> A change only becomes effective after a POWER ON.

Dependency: Refer to: p2030

Note: Changes only become effective after POWER ON.
The parameter is not influenced by setting the factory setting.
The parameter is set to the factory setting when the protocol is reselected.

p2022 Field bus int USS PZD no. / Field bus USS PZD

CU_S_AC_DP, CU_S120_DP, CU_S150_DP

P-Group: Communications	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	16	2

Description: Sets the number of 16-bit words in the PZD part of the USS telegram for the field bus interface.

Dependency: Refer to: p2030

Note: The parameter is not influenced by setting the factory setting.

p2023 Field bus interface USS PKW count / Field bus USS PKW

CU_S_AC_DP, CU_S120_DP, CU_S150_DP

Can be changed: T	**Calculated:** -	**Access level:** 2
Data type: Integer16	**Dyn. index:** -	**Func. diagram:** -
P-Group: Communications	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	127	127

Description: Sets the number of 16-bit words in the PKW part of the USS telegram for the field bus interface.

Value:
0: PKW 0 words
3: PKW 3 words
4: PKW 4 words
127: PKW variable

Dependency: Refer to: p2030

Note: The parameter is not influenced by setting the factory setting.

p2024[0...2] Fieldbus interface times / Fieldbus times

CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Communications	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0 [ms]	10000 [ms]	[0] 1000 [ms] [1] 0 [ms] [2] 0 [ms]

Description: Sets the time values for the fieldbus interface.
For Modbus the following applies:
p2024[0, 1]: Not relevant.
p2024[2]: Telegram pause time (pause time between two telegrams).

Index:
[0] = Max. processing time
[1] = Character delay time
[2] = Telegram pause time

Dependency: Refer to: p2020, p2030

Note: For p2024[2] (Modbus):
If the field bus baud rate is changed (p2020), the default time setting is restored.
The default setting corresponds to a time of 3.5 characters (dependent on the baud rate that has been set).

r2029[0...7] Field bus interface error statistics / Field bus error

[4] = Number of parity errors
[5] = Number of starting character errors
[6] = Number of checksum errors
[7] = Number of length errors

p2030 Field bus interface protocol selection / Field bus protocol

CU_S_AC_DP, CU_S120_DP, CU_S150_DP

Can be changed: T	**Calculated:** -	**Access level:** 1
Data type: Integer16	**Dyn. index:** -	**Func. diagram:** -
P-Group: Communications	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
3	6	3

Description: Sets the communication protocol for the field bus interface.

Value:
3: PROFIBUS
6: USS (X140)

Note: Changes only become effective after POWER ON.

The parameter is not influenced by setting the factory setting.

p2030 Field bus interface protocol selection / Field bus protocol

CU_S_AC_PN, CU_S120_PN, CU_S150_PN

Can be changed: T	**Calculated:** -	**Access level:** 1
Data type: Integer16	**Dyn. index:** -	**Func. diagram:** -
P-Group: Communications	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
7	13	7

Description: Sets the communication protocol for the field bus interface.

Value:
7: PROFINET
10: EtherNet/IP
13: Modbus TCP

Note: Changes only become effective after POWER ON.

The parameter is not influenced by setting the factory setting.

r2032 Master control control word effective / PcCtrl STW eff

SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC

p2035 Fieldbus interface USS PIV drive object number / Fieldbus USS DO_no

CU_S_AC_DP, CU_S120_DP, CU_S150_DP

Can be changed: U, T	**Calculated:** -	**Access level:** 2
Data type: Integer16	**Dyn. index:** -	**Func. diagram:** -
P-Group: Communications	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
1	62	2

Description: Sets the drive object number for communication via the field bus interface (USS).

Dependency: Refer to: p0978

Note: p2035 defines the destination for USS parameter requests (PIV).

p0978[0] defines the destination for USS process data (PZD).

The parameter is available globally on all drive objects.

The parameter is not influenced by setting the factory setting.

p2037 IF1 PROFIdrive STW1.10 = 0 mode / IF1 PD STW1.10=0

SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, A_INF, S_INF, R_INF, B_INF, TM41, ENC

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: Integer16	**Dyn. index:** -	**Func. diagram:** -
P-Group: Communications	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	2	0

Description: Sets the processing mode for PROFIdrive STW1.10 "master control by PLC".

Generally, control world 1 is received with the first receive word (PZD1) (this is in conformance to the PROFIdrive profile). The behavior of STW1.10 = 0 corresponds to that of the PROFIdrive profile. For other applications that deviate from this, the behavior can be adapted using this particular parameter.

Value:
0: Freeze setpoints and continue to process sign-of-life
1: Freeze setpoints and sign-of-life
2: Do not freeze setpoints

Recommendation: Do not change the setting p2037 = 0.

Note: If the STW1 is not transferred according to the PROFIdrive with PZD1 (with bit 10 "master control by PLC"), then p2037 should be set to 2.

p2038 IF1 PROFIdrive STW/ZSW interface mode / PD STW/ZSW IF mode

SERVO, SERVO_AC, SERVO_I_AC

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: Integer16	**Dyn. index:** -	**Func. diagram:** -
P-Group: Communications	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	2	0

Description: Displays the interface mode of the PROFIdrive control words and status words.

Value:
0: SINAMICS
1: SIMODRIVE 611 universal
2: VIK-NAMUR

Dependency: Refer to: p0922, p2079

Notice: The parameter is protected and cannot be changed.

Note: For telegram selection p0922 (p2079) = 102, 103, 105, 106, 116, 118, 125, 126, 136, 138, 139, then p2038 is automatically set = 1.

When another telegram is selected, then p2038 is automatically set = 0.

p2038 IF1 PROFIdrive STW/ZSW interface mode / PD STW/ZSW IF mode

SERVO (EPOS, Pos ctrl), SERVO_AC (EPOS, Pos ctrl)

Can be changed: T	**Calculated:** -	**Access level:** 3

	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0	0	0

Description: Displays the interface mode of the PROFIdrive control words and status words.

Value: 0: SINAMICS

Dependency: Refer to: p0922, p2079

Notice: The parameter is protected and cannot be changed.

Note: For p0922 (p2079) = 7, 9, 110, 111, p2038 is automatically set to 0 and cannot be changed.

p2039 Select debug monitor interface / Debug monit select

CU_I, CU_I_D410	**Can be changed:** U, T	**Calculated:** -	**Access level:** 3
	Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** -
	P-Group: Communications	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0	3	1

Description: Sets the serial interface for the debug monitor.

The serial interface for the debug monitor is COM1 (X140) or COM2 (internal).

Value = 0: COM2 (internal)

Value = 1: COM1 (X140), commissioning protocol is deactivated

Value = 2: COM2 (internal)

Value = 3: Reserved

p2039 Select debug monitor interface / Debug monit select

CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP	**Can be changed:** U, T	**Calculated:** -	**Access level:** 4
	Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** -
	P-Group: Communications	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0	3	0

Description: Sets the serial interface for the debug monitor.

The serial interface for the debug monitor is COM1 (X140) or COM2 (internal).

Value = 0: COM2 (internal)

Value = 1: COM1 (X140), commissioning protocol is deactivated

Value = 2: COM2 (internal)

Value = 3: Reserved

p2040 COMM INT monitoring time / COMM INT t_monit

CU_I, CU_NX_CX, CU_I_D410, CU_LINK	**Can be changed:** U, T	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
	P-Group: Communications	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0 [ms]	1999999 [ms]	20 [ms]

Description: Sets the monitoring time to monitor the process data received via the internal communications interface.

If no process data is received within this time, then an appropriate message is output.

Note: Value = 0: Monitoring is deactivated.

p2040 Fieldbus interface monitoring time / Fieldbus t_monit

CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Communications	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0 [ms]	1999999 [ms]	100 [ms]

Description: Sets the monitoring time to monitor the process data received via the fieldbus interface.

If no process data is received within this time, then an appropriate message is output.

Dependency: Refer to: p2030

Note: The parameter is only relevant for the setting of the following fieldbus protocols.

- USS (X140) (p2030 = 6)
- Modbus TCP (p2030 = 13)

Value = 0: Monitoring is deactivated.

p2042 PROFIBUS Ident Number / PB ident No.

CU_S_AC_DP, CU_S120_DP, CU_S150_DP

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: Integer16	**Dyn. index:** -	**Func. diagram:** -
P-Group: Communications	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	1	0

Description: Sets the PROFIBUS ident number (PNO-ID).

SINAMICS can be operated with various identities on PROFIBUS. This allows the use of a PROFIBUS GSD that is independent of the device (e.g. PROFIdrive VIK-NAMUR with ident number 3AA0 hex).

Value:
0: SINAMICS
1: VIK-NAMUR

Note: Every change only becomes effective after a POWER ON.

r2043.0...2 BO: IF1 PROFIdrive PZD state / IF1 PD PZD state

CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned8	**Dyn. index:** -	**Func. diagram:** 2410
P-Group: Communications	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the PROFIdrive PZD state.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Setpoint failure	Yes	No	-
01	Clock cycle synchronous operation active	Yes	No	-
02	Fieldbus operation	Yes	No	-

Dependency: Refer to: p2044

Note: When using the "setpoint failure" signal, the bus can be monitored and an application-specific response triggered when the setpoint fails.

p2044 IF1 PROFIdrive fault delay / IF1 PD fault delay

SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, A_INF, S_INF, R_INF, B_INF, TM41, ENC

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 2410
P-Group: Communications	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0 [s]	100 [s]	0 [s]

Description: Sets the delay time to initiate fault F01910 after a setpoint failure.

The time until the fault is initiated can be used by the application. This means that is is possible to respond to the failure while the drive is still operational (e.g. emergency retraction).

Dependency: Refer to: r2043

p2045 CI: PB/PN clock synchronous controller sign-of-life signal source / PB/PN ctrSoL s_src

CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410, SERVO, VECTOR (n/M), HLA, SERVO_AC, VECTOR_AC (n/M), SERVO_I_AC, VECTOR_I_AC (n/M), TM41, ENC

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32 / Integer16	**Dyn. index:** -	**Func. diagram:** 2410
P-Group: Communications	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0

Description: Connector input for the sign-of-life of the clock synchronous PROFIBUS/PROFINET controller.

The sign-of-life is expected at bits 12 to 15. Bits 0 to 11 are not evaluated.

The sign-of-life signal is normally received in PZD4 (control word 2) from the controller.

Dependency: Refer to: p0925, r2065

Notice: The parameter may be protected as a result of p0922 or p2079 and cannot be changed.

p2047 PROFIBUS additional monitoring time / PB suppl t_monit

CU_S_AC_DP, CU_S120_DP, CU_S150_DP

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 2410
P-Group: Communications	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0 [ms]	20000 [ms]	0 [ms]

Description: Sets the additional monitoring time to monitor the process data received via PROFIBUS.

Enables short bus faults to be compensated.

If no process data is received within this time, then an appropriate message is output.

Recommendation: In the isochronous mode, the additional monitoring time should not be set.

Note: For controller STOP, the additional monitoring time is not effective.

p2048 IF1 PROFIdrive PZD sampling time / IF1 PZD t_sample

CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410

Can be changed: C1(3)	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Communications	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
1.00 [ms]	16.00 [ms]	4.00 [ms]

Description: Sets the sampling time for the cyclic interface 1 (IF1).

Note: The system only permits certain sampling times and after writing to this parameter, displays the value that has actually been set.

For clock cycle synchronous operation, the specified bus cycle time applies (Tdp).

p2049 PROFIdrive isochronous operation asynchronous participation / Isochron async

SERVO, VECTOR, SERVO_I_AC, VECTOR_I_AC

Can be changed: C1(3)	**Calculated:** -	**Access level:** 3
Data type: Integer16	**Dyn. index:** -	**Func. diagram:** -
P-Group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	1	0

Description: Setting for asynchronous participation in isochronous operation.

For p2049 = 1:

The axis only asynchronously participates in isochronous PROFIdrive operation.

The control sampling times of this axis are not included in the bus cycle time check (Tdp), in the time of the actual value sensing (Ti) and in the time of the setpoint sensing (To).

For p2049 = 0:

No effect on the setting in p0092.

Value:
0: No
1: Yes

Dependency: Refer to: p0092

Caution: Restrictions for asynchronous participation in isochronous PROFIBUS operation:

- the setpoints are effective at undefined instant in time (deviating from To). As a consequence, interpolating operation with other axes is not possible, for example.

- the actual values are read at undefined instant in time (deviating from Ti). As a consequence, the actual values cannot be used to control other axes, for example.

r2050[0...19] CO: IF1 PROFIdrive PZD receive word / IF1 PZD recv word

CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410

Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	255	-

Description: Status display for the internal communications interface.

Value:
0: No initialization
1: Fatal fault
2: Initialization
3: Send configuration
4: Receive configuration
5: Non-cyclic communication
6: Cyclic communications but no setpoints (stop/no clock cycle)
255: Cyclic communication

r2054 PROFIBUS status / PB status

CU_S_AC_DP, CU_S120_DP, CU_S150_DP

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Integer16	**Dyn. index:** -	**Func. diagram:** 2410
P-Group: Communications	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	4	-

Description: Status display for the PROFIBUS interface.

Value:
0: OFF
1: No connection (search for baud rate)
2: Connection OK (baud rate found)
3: Cyclic connection with master (data exchange)
4: Cyclic data OK

Note: For r2054 = 2:

If the state is not exited, then set or check the PROFIBUS address in p0918.

For r2054 = 3:

In state 3 (the LED flashes green), a cyclic connection has been established to the PROFIBUS master; however, one of the following prerequisites is missing for cyclic operation:

- no setpoints are being received as the PROFIBUS master is in the STOP condition.

Only for isochronous operation, the following applies:

- the drive is not in synchronism as the global control (GC) has an error.

For r2054 = 4:

In the status 4 (LED green), the cyclic connection to the PROFIBUS master has been established and setpoints are being received. The clock cycle synchronization is OK, the global control (GC) is error-free.

This state does not provide any statement regarding the quality of the clock cycle synchronous sign-of-life characters on the drive objects.

P-Group: Communications	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0

Description: Sets the signal source for the connector-binector converter.

A PZD receive word can be selected as signal source. The signals are available to be serially passed-on (interconnection).

Dependency: Refer to: r2094, r2095

Note: From the signal source set via the connector input, the corresponding lower 16 bits are converted.

p2099[0...1] together with r2094.0...15 and r2095.0...15 forms two connector-binector converters:

Connector input p2099[0] to binector output in r2094.0...15

Connector input p2099[1] to binector output in r2095.0...15

p2100[0...19] Change fault response fault number / Chng resp F_no

0	65535	0

Description: Selects the faults for which the fault response should be changed

Dependency: The fault is selected and the required response is set under the same index.

Refer to: p2101

Note: Re-parameterization is also possible if a fault is present. The change only becomes effective after the fault has been resolved.

p2101[0...19] Change fault response response / Chng resp resp

CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410, TM31, TM17, TM15, TM15DI_DO, TM120, TM150, TB30, TM54F_MA, TM54F_SL, ENC, HUB, CU_LINK

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Integer16	**Dyn. index:** -	**Func. diagram:** 8050, 8075
P-Group: Messages	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	0	0

Description: Sets the fault response for the selected fault.

Value: 0: NONE

Dependency: The fault is selected and the required response is set under the same index.

Notice: For the following cases, it is not possible to re-parameterize the fault response to a fault:

- fault number does not exist (exception value = 0).
- Message type is not "fault" (F).
- fault response is not permissible for the set fault number.

Note: Re-parameterization is also possible if a fault is present. The change only becomes effective after the fault has been resolved.

p2101[0...19] Change fault response response / Chng resp resp

SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, TM41	**Can be changed:** U, T	**Calculated:** -	**Access level:** 3
	Data type: Integer16	**Dyn. index:** -	**Func. diagram:** 8050, 8075
	P-Group: Messages	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0	7	0

Description: Sets the fault response for the selected fault.

Value:
0: NONE
1: OFF1
2: OFF2
3: OFF3
5: STOP2
6: Internal armature short-circuit / DC braking
7: ENCODER (p0491)

Dependency: The fault is selected and the required response is set under the same index.

Refer to: p2100

Notice: For the following cases, it is not possible to re-parameterize the fault response to a fault:

- fault number does not exist (exception value = 0).
- Message type is not "fault" (F).
- fault response is not permissible for the set fault number.

Note: Re-parameterization is also possible if a fault is present. The change only becomes effective after the fault has been resolved.

The fault response can only be changed for faults with the appropriate identification (see the List Manual, chapter "Faults and alarms").

Example:

F12345 and fault response = OFF3 (OFF1, OFF2, NONE)

--> The default fault response OFF3 can be changed to OFF1, OFF2 or NONE.

For value = 1 (OFF1):

Braking along the ramp-function generator down ramp followed by a pulse inhibit.

For value = 2 (OFF2):

Internal/external pulse inhibit.

For value = 3 (OFF3):

Braking along the OFF3 down ramp followed by a pulse inhibit.

For value = 5 (STOP2):

n_set = 0

For value = 6 (armature short-circuit, internal/DC braking):

The value can only be set for all motor data sets when p1231 = 3, 4.

a) For synchronous motors (p0300 = 2xx, 4xx), an internal armature short-circuit is executed.

b) For induction motors (p0300 = 1xx), a DC braking is initiated.

For value = 7 (ENCODER (p0491)):

The fault response set in p0491 is executed if applicable.

Note:

IASC: Internal Armature Short Circuit

DCBRK: DC braking

p2101[0...19] Change fault response response / Chng resp resp

A_INF, S_INF, R_INF, B_INF

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Integer16	**Dyn. index:** -	**Func. diagram:** 8050, 8075
P-Group: Messages	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	2	0

Description: Sets the fault response for the selected fault.

Value:
0: NONE
1: OFF1
2: OFF2

Dependency: The fault is selected and the required response is set under the same index.

Notice: For the following cases, it is not possible to re-parameterize the fault response to a fault:
- fault number does not exist (exception value = 0).
- Message type is not "fault" (F).
- fault response is not permissible for the set fault number.

Note: Re-parameterization is also possible if a fault is present. The change only becomes effective after the fault has been resolved.

p2102 BI: Acknowledge all faults / Ackn all faults

CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410

Description: Sets the signal source for external fault 3.
External fault 3 is initiated by the following AND logic operation:
- BI: p2108 negated
- BI: p3111
- BI: p3112 negated

Dependency: Refer to: p3110, p3111, p3112
Refer to: F07862

Note: An external fault is triggered with a 0 signal.
If this fault is output at the Control Unit, then it is transferred to all existing drive objects.

r2109[0...63]	Fault time removed in milliseconds / t_flt resolved ms		
All objects	**Can be changed:** -	**Calculated:** -	**Access level:** 3
	Data type: Unsigned32	**Dyn. index:** -	**Func. diagram:** 8050, 8060
	P-Group: Messages	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	- [ms]	- [ms]	- [ms]

Description: Displays the system runtime in milliseconds when the fault was removed.

Dependency: Refer to: r0945, r0947, r0948, r0949, r2114, r2130, r2133, r2136, r3115, r3120, r3122

Notice: The time comprises r2136 (days) and r2109 (milliseconds).

Note: The buffer parameters are cyclically updated in the background (refer to status signal in r2139).
The structure of the fault buffer and the assignment of the indices is shown in r0945.

r2110[0...63]	Alarm number / Alarm number		
All objects	**Can be changed:** -	**Calculated:** -	**Access level:** 2
	Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** 8065
	P-Group: Messages	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	-	-	-

Description: This parameter is identical to r2122.

p2111	Alarm counter / Alarm counter		
All objects	**Can be changed:** U, T	**Calculated:** -	**Access level:** 3
	Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** 8050, 8065
	P-Group: Messages	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0	65535	0

Description: Number of alarms that have occurred after the last reset.

Dependency: When p2111 is set to 0, the following is initiated:
- all of the alarms of the alarm buffer that have gone [0...7] are transferred into the alarm history [8...63].
- the alarm buffer [0...7] is deleted.
Refer to: r2110, r2122, r2123, r2124, r2125

Note: The parameter is reset to 0 at POWER ON.

p2112 BI: External alarm 1 / External alarm 1

CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410, TM31, TM17, TM15, TM15DI_DO, TM120, TM150, TB30, TM54F_MA, TM54F_SL, ENC, HUB, CU_LINK

Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	1

Description: Sets the signal source for external alarm 1.

Dependency: Refer to: A07850

Note: An external alarm is triggered with a 0 signal.

p2112[0...n] BI: External alarm 1 / External alarm 1

SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, A_INF, S_INF, R_INF, B_INF, TM41

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32 / Binary	**Dyn. index:** CDS, p0170	**Func. diagram:** 2546
P-Group: Messages	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	1

Description: Sets the signal source for external alarm 1.

Dependency: Refer to: A07850

Note: An external alarm is triggered with a 0 signal.

r2114[0...1] System runtime total / Sys runtime tot

CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Messages	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the total system runtime for the drive unit.

The time comprises r2114[0] (milliseconds) and r2114[1] (days).

After r2114[0] has reached a value of 86.400.000 ms (24 hours) this value is reset and r2114[1] is incremented.

Index: [0] = Milliseconds
[1] = Days

Dependency: Refer to: r0948, r2109, r2123, r2125, r2130, r2136, r2145, r2146

Note: The time in r2114 is used to display the times for faults and alarms.

When the electronic power supply is switched out, the counter values are saved.

After the drive unit is switched on, the counter continues to run with the last value that was saved.

Description: Sets the signal source for external alarm 3.

Dependency: Refer to: A07852

Note: An external alarm is triggered with a 0 signal.

p2117[0...n]	BI: External alarm 3 / External alarm 3		
SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, A_INF, S_INF, R_INF, B_INF, TM41	**Can be changed:** U, T	**Calculated:** -	**Access level:** 3
	Data type: Unsigned32 / Binary	**Dyn. index:** CDS, p0170	**Func. diagram:** 2546
	P-Group: Messages	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	-	-	1

Description: Sets the signal source for external alarm 3.

Dependency: Refer to: A07852

Note: An external alarm is triggered with a 0 signal.

p2118[0...19]	Change message type message number / Chng type msg_no		
All objects	**Can be changed:** U, T	**Calculated:** -	**Access level:** 3
	Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** 8050, 8075
	P-Group: Messages	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0	65535	0

Description: Selects faults or alarms for which the message type should be changed.

Dependency: Selects the fault or alarm selection and sets the required type of message realized under the same index.

Refer to: p2119

Note: Re-parameterization is also possible if a message is present. The change only becomes effective after the message has gone.

p2119[0...19]	Change message type type / Change type type		
All objects	**Can be changed:** U, T	**Calculated:** -	**Access level:** 3
	Data type: Integer16	**Dyn. index:** -	**Func. diagram:** 8050, 8075
	P-Group: Messages	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	1	3	1

Description: Sets the message type for the selected fault or alarm.

Value:
1: Fault (F)
2: Alarm (A)
3: No message (N)

Dependency: Selects the fault or alarm selection and sets the required type of message realized under the same index.

Refer to: p2118

Note: Re-parameterization is also possible if a message is present. The change only becomes effective after the message has gone.

The message type can only be changed for messages with the appropriate identification (exception, value = 0).

Example:

F12345(A) --> Fault F12345 can be changed to alarm A12345.

In this case, the message number that may be possibly entered in p2100[0...19] and p2126[0...19] is automatically removed.

r2120 CO: Sum of fault and alarm buffer changes / Sum buffer changed

All objects

Can be changed: -	**Calculated:** -	**Access level:** 4
Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** 8065
P-Group: Messages	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the sum of all of the fault and alarm buffer changes in the drive unit.

Dependency: Refer to: r0944, r2121

r2121 CO: Counter alarm buffer changes / Alrm buff changed

All objects

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** 8065
P-Group: Messages	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: This counter is incremented every time the alarm buffer changes.

Dependency: Refer to: r2110, r2122, r2123, r2124, r2125

r2122[0...63] Alarm code / Alarm code

All objects

Can be changed: -	**Calculated:** -	**Access level:** 2
Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** 8050, 8065
P-Group: Messages	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the number of alarms that have occurred.

Dependency: Refer to: r2110, r2123, r2124, r2125, r2134, r2145, r2146, r3121, r3123

Notice: The properties of the alarm buffer should be taken from the corresponding product documentation.

Note: The buffer parameters are cyclically updated in the background (refer to status signal in r2139).

Alarm buffer structure (general principle):

r2122[0], r2124[0], r2123[0], r2125[0] --> alarm 1 (the oldest)

. . .

r2122[7], r2124[7], r2123[7], r2125[7] --> Alarm 8 (the latest)

When the alarm buffer is full, the alarms that have gone are entered into the alarm history:

r2122[8], r2124[8], r2123[8], r2125[8] --> Alarm 1 (the latest)

. . .

r2122[63], r2124[63], r2123[63], r2125[63] --> alarm 56 (the oldest)

r2123[0...63] Alarm time received in milliseconds / t_alarm recv ms

All objects

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** -	**Func. diagram:** 8050, 8065
P-Group: Messages	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
- [ms]	- [ms]	- [ms]

Description: Displays the system runtime in milliseconds when the alarm occurred.

Dependency: Refer to: r2110, r2114, r2122, r2124, r2125, r2134, r2145, r2146, r3121, r3123

Notice: The time comprises r2145 (days) and r2123 (milliseconds).

Note: The buffer parameters are cyclically updated in the background (refer to status signal in r2139).

The structure of the alarm buffer and the assignment of the indices is shown in r2122.

r2124[0...63] Alarm value / Alarm value

All objects

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Integer32	**Dyn. index:** -	**Func. diagram:** 8050, 8065
P-Group: Messages	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays additional information about the active alarm (as integer number).

Dependency: Refer to: r2110, r2122, r2123, r2125, r2134, r2145, r2146, r3121, r3123

Note: The buffer parameters are cyclically updated in the background (refer to status signal in r2139).

The structure of the alarm buffer and the assignment of the indices is shown in r2122.

r2125[0...63] Alarm time removed in milliseconds / t_alarm res ms

All objects

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** -	**Func. diagram:** 8050, 8065
P-Group: Messages	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
- [ms]	- [ms]	- [ms]

Description: Displays the system runtime in milliseconds when the alarm was cleared.

Dependency: Refer to: r2110, r2114, r2122, r2123, r2124, r2134, r2145, r2146, r3121, r3123

Notice: The time comprises r2146 (days) and r2125 (milliseconds).

Note: The buffer parameters are cyclically updated in the background (refer to status signal in r2139).

The structure of the alarm buffer and the assignment of the indices is shown in r2122.

p2126[0...19] Change acknowledge mode fault number / Chng ackn F_no

All objects

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** 8050, 8075
P-Group: Messages	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	65535	0

Description: Selects the faults for which the acknowledge mode is to be changed

Dependency: Selects the faults and sets the required acknowledge mode realized under the same index

Refer to: p2127

Note: Re-parameterization is also possible if a fault is present. The change only becomes effective after the fault has been resolved.

p2127[0...19] Change acknowledge mode mode / Chng ackn mode

All objects

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Integer16	**Dyn. index:** -	**Func. diagram:** 8050, 8075
P-Group: Messages	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
1	3	1

Description: Sets the acknowledge mode for selected fault.

Value:
1: Acknowledgment only using POWER ON
2: Ack IMMEDIATELY after the fault cause has been removed
3: Acknowledgment only for PULSE INHIBIT

Dependency: Selects the faults and sets the required acknowledge mode realized under the same index

Refer to: p2126

Notice: It is not possible to re-parameterize the acknowledge mode for a fault in the following cases:

- fault number does not exist (exception value = 0).
- Message type is not "fault" (F).
- Acknowledge mode is not permissible for the set fault number.

Note: Re-parameterization is also possible if a fault is present. The change only becomes effective after the fault has been resolved.

The acknowledge mode can only be changed for faults with the appropriate identification.

Example:

F12345 and acknowledge mode = IMMEDIATELY (POWER ON)

--> The acknowledge mode can be changed from IMMEDIATELY to POWER ON.

p2128[0...15] Faults/alarms trigger selection / F/A trigger sel

All objects

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** 8050, 8070
P-Group: Messages	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	65535	0

Description: Sets the faults/alarms for which a trigger signal should be generated in r2129.0...15.

Dependency: If the fault/alarm set in p2128[0...15] occurs, then the particular binector output r2129.0...15 is set.

Refer to: r2129

r2129.0...15 CO/BO: Faults/alarms trigger word / F/A trigger word

All objects

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** 8070
P-Group: Messages	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Display and BICO output for the trigger signals of the faults/alarms set in p2128[0...15].

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Trigger signal p2128[0]	ON	OFF	-
01	Trigger signal p2128[1]	ON	OFF	-
02	Trigger signal p2128[2]	ON	OFF	-
03	Trigger signal p2128[3]	ON	OFF	-
04	Trigger signal p2128[4]	ON	OFF	-
05	Trigger signal p2128[5]	ON	OFF	-
06	Trigger signal p2128[6]	ON	OFF	-
07	Trigger signal p2128[7]	ON	OFF	-
08	Trigger signal p2128[8]	ON	OFF	-
09	Trigger signal p2128[9]	ON	OFF	-
10	Trigger signal p2128[10]	ON	OFF	-
11	Trigger signal p2128[11]	ON	OFF	-
12	Trigger signal p2128[12]	ON	OFF	-
13	Trigger signal p2128[13]	ON	OFF	-
14	Trigger signal p2128[14]	ON	OFF	-
15	Trigger signal p2128[15]	ON	OFF	-

Dependency: If the fault/alarm set in p2128[0...15] occurs, then the particular binector output r2129.0...15 is set.

Refer to: p2128

Note: CO: r2129 = 0 --> None of the selected messages has occurred.

CO: r2129 > 0 --> At least one of the selected messages has occurred.

r2130[0...63] Fault time received in days / t_fault recv days

All objects

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** 8060
P-Group: Messages	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the system runtime in days when the fault occurred.

Dependency: Refer to: r0945, r0947, r0948, r0949, r2109, r2114, r2133, r2136, p3100, r3115, r3120, r3122

Notice: The time comprises r2130 (days) and r0948 (milliseconds).
The time display depends on the selected mode (p3100).

Note: The buffer parameters are cyclically updated in the background (refer to status signal in r2139).

r2131 CO: Actual fault code / Act fault code

All objects

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** 8060
P-Group: Messages	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the code of the oldest active fault.

Dependency: Refer to: r3131, r3132

Note: 0: No fault present.

r2132 CO: Actual alarm code / Actual alarm code

All objects

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** 8065
P-Group: Messages	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the code of the last alarm that occurred.

Note: 0: No alarm present.

r2133[0...63] Fault value for float values / Fault val float

All objects

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 8060
P-Group: Messages	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays additional information about the fault that occurred for float values.

Dependency: Refer to: r0945, r0947, r0948, r0949, r2109, r2130, r2136, r3115

Note: The buffer parameters are cyclically updated in the background (refer to status signal in r2139).

r2134[0...63] Alarm value for float values / Alarm value float

All objects

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 8065
P-Group: Messages	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays additional information about the active alarm for float values.

Dependency: Refer to: r2110, r2122, r2123, r2124, r2125, r2145, r2146, r3121, r3123

Note: The buffer parameters are cyclically updated in the background (refer to status signal in r2139).

r2135.0...15 CO/BO: Status word faults/alarms 2 / ZSW fault/alarm 2

All objects

Can be changed: -	**Calculated:** -	**Access level:** 2
Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** 2548
P-Group: Displays, signals	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Display and BICO output for the second status word of faults and alarms.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Fault encoder 1	Yes	No	-
01	Fault encoder 2	Yes	No	-
02	Fault encoder 3	Yes	No	-
12	Fault motor overtemperature	Yes	No	8016
13	Fault power unit thermal overload	Yes	No	8021
14	Alarm motor overtemperature	Yes	No	8016
15	Alarm power unit thermal overload	Yes	No	8021

r2136[0...63] Fault time removed in days / t_flt resolv days

All objects

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** 8060
P-Group: Messages	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the system runtime in days when the fault was removed.

Dependency: Refer to: r0945, r0947, r0948, r0949, r2109, r2114, r2130, r2133, r3115, r3120, r3122

Notice: The time comprises r2136 (days) and r2109 (milliseconds).

Note: The buffer parameters are cyclically updated in the background (refer to status signal in r2139).

r2138.7...15 CO/BO: Control word faults/alarms / STW fault/alarm

All objects

Can be changed: -	**Calculated:** -	**Access level:** 2
Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** 2546
P-Group: Displays, signals	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Display and BICO output for the control word of faults and alarms.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
07	Acknowledge fault	Yes	No	8060
10	External alarm 1 (A07850) effective	Yes	No	8065
11	External alarm 2 (A07851) effective	Yes	No	8065
12	External alarm 3 (A07852) effective	Yes	No	8065
13	External fault 1 (F07860) effective	Yes	No	8060
14	External fault 2 (F07861) effective	Yes	No	8060
15	External fault 3 (F07862) effective	Yes	No	8060

Dependency: Refer to: p2103, p2104, p2105, p2106, p2107, p2108, p2112, p2116, p2117, p3110, p3111, p3112

r2139.0...15 CO/BO: Status word faults/alarms 1 / ZSW fault/alarm 1

All objects

Can be changed: -	**Calculated:** -	**Access level:** 2
Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** 2548
P-Group: Displays, signals	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Display and BICO output for status word 1 of faults and alarms.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Being acknowledged	Yes	No	-
01	Acknowledgment required	Yes	No	-
03	Fault present	Yes	No	8060
05	Safety message present	Yes	No	-
06	Internal message 1 present	Yes	No	-
07	Alarm present	Yes	No	8065
08	Internal message 2 present	Yes	No	-
11	Alarm class bit 0	High	Low	-
12	Alarm class bit 1	High	Low	-
13	Maintenance required	Yes	No	-
14	Maintenance urgently required	Yes	No	-
15	Fault gone/can be acknowledged	Yes	No	-

Note: For bit 03, 05, 07:

These bits are set if at least one fault/alarm occurs. Data is entered into the fault/alarm buffer with delay. For this reason, the fault/alarm buffer should only be read if, after "Fault active" or "Alarm active" occurs, a change is also identified in the buffer (r0944, r9744, r2121).

For bit 06, 08:

These status bits are used for internal diagnostic purposes only.

For bit 12, 11:

These status bits are used for the classification of internal alarm classes and are intended for diagnostic purposes only on certain automation systems with integrated SINAMICS functionality.

p2140[0...n] Hysteresis speed 2 / n_hysteresis 2

SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC

Can be changed: U, T	**Calculated:** CALC_MOD_LIM_REF	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 8010
P-Group: Messages	**Unit group:** 3_1	**Unit selection:** p0505
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.00 [rpm]	300.00 [rpm]	90.00 [rpm]

Description: Sets the hysteresis speed (bandwidth) for the following signals:
"|n_act| < = speed threshold value 2" (BO: r2197.1)
"|n_act| > speed threshold value 2" (BO: r2197.2)

Dependency: Refer to: p2155, r2197

p2140[0...n] Hysteresis velocity 2 / v_hysteresis 2

SERVO (Lin), SERVO_AC (Lin), SERVO_I_AC (Lin)

Can be changed: U, T	**Calculated:** CALC_MOD_LIM_REF	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 8010
P-Group: Messages	**Unit group:** 4_1	**Unit selection:** p0505
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.00 [m/min]	10.00 [m/min]	0.90 [m/min]

Description: Sets the hysteresis velocity (bandwidth) for the following signals:
"|n_act| < = velocity threshold value 2" (BO: r2197.1)
"|n_act| > velocity threshold value 2" (BO: r2197.2)

Dependency: Refer to: p2155, r2197

p2141[0...n] Speed threshold 1 / n_thresh val 1

SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC

Can be changed: U, T	**Calculated:** CALC_MOD_LIM_REF	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 8010

Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.00 [rpm]	210000.00 [rpm]	5.00 [rpm]

Description: Sets the speed threshold value for the signal "f or n comparison value reached or exceeded" (BO: r2199.1).

Dependency: Refer to: p2142, r2199

p2141[0...n] Velocity threshold value 1 / v_thresh val 1

SERVO (Lin), SERVO_AC (Lin), SERVO_I_AC (Lin)

Can be changed: U, T	**Calculated:** CALC_MOD_LIM_REF	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 8010
P-Group: Messages	**Unit group:** 4_1	**Unit selection:** p0505
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.00 [m/min]	1000.00 [m/min]	0.05 [m/min]

Description: Sets the velocity threshold value for the signal "f or n comparison value reached or exceeded" (BO: r2199.1).

Dependency: Refer to: p2142, r2199

p2142[0...n] Hysteresis speed 1 / n_hysteresis 1

SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC

Can be changed: U, T	**Calculated:** CALC_MOD_LIM_REF	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 8010
P-Group: Messages	**Unit group:** 3_1	**Unit selection:** p0505
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.00 [rpm]	300.00 [rpm]	2.00 [rpm]

Description: Sets the hysteresis speed (bandwidth) for the signal "f or n / v comparison value reached or exceeded" (BO: r2199.1).

Dependency: Refer to: p2141, r2199

p2142[0...n] Hysteresis speed 1 / n_hysteresis 1

SERVO (Lin), SERVO_AC (Lin), SERVO_I_AC (Lin)

Can be changed: U, T	**Calculated:** CALC_MOD_LIM_REF	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 8010
P-Group: Messages	**Unit group:** 4_1	**Unit selection:** p0505
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.00 [m/min]	10.00 [m/min]	0.02 [m/min]

Description: Sets the hysteresis speed (bandwidth) for the signal "f or n / v comparison value reached or exceeded" (BO: r2199.1).

Dependency: Refer to: p2141, r2199

p2144[0...n] BI: Motor stall monitoring enable (negated) / Mot stall enab neg

SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32 / Binary	**Dyn. index:** CDS, p0170	**Func. diagram:** 8012
P-Group: -	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0

Description: Sets the signal source for the negated enable (0 = enable) of the motor stall monitoring.

Dependency: Refer to: p2163, p2164, p2166, r2197, r2198

Refer to: F07900

Note: When interconnecting the enable signal with r2197.7 then the stall signal is suppressed if there is no speed setpoint - actual value deviation.

r2145[0...63] Alarm time received in days / t_alarm recv days

All objects

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** 8065
P-Group: Messages	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the system runtime in days when the alarm occurred.

Dependency: Refer to: r2110, r2114, r2122, r2123, r2124, r2125, r2134, r2146, r3121, r3123

Notice: The time comprises r2145 (days) and r2123 (milliseconds).

Note: The buffer parameters are cyclically updated in the background (refer to status signal in r2139).

r2146[0...63] Alarm time removed in days / t_alarm res days

All objects

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** 8065
P-Group: Messages	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the system runtime in days when the alarm was cleared.

Dependency: Refer to: r2110, r2114, r2122, r2123, r2124, r2125, r2134, r2145, r3121, r3123

Notice: The time comprises r2146 (days) and r2125 (milliseconds).

Note: The buffer parameters are cyclically updated in the background (refer to status signal in r2139).

p2147 Delete fault buffer of all drive objects / Del fault buffer

CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410

Can be changed: U, T	**Calculated:** -	**Access level:** 4
Data type: Integer16	**Dyn. index:** -	**Func. diagram:** 8060
P-Group: Displays, signals	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	1	0

Description: Setting to delete the fault buffer of all existing drive objects.

Value:
0: Inactive
1: Start to delete the fault buffer of all drive objects

Dependency: Refer to: r0945, r0947, r0948, r0949, r2109, r2130, r2133, r2136

Note: p2147 is automatically set to 0 after execution.

p2148[0...n] BI: RFG active / RFG active

SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC

Can be changed: U, T	**Calculated:** CALC_MOD_LIM_REF	**Access level:** 3
Data type: Unsigned32 / Binary	**Dyn. index:** CDS, p0170	**Func. diagram:** 8011
P-Group: Messages	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0

Description: Sets the signal source for the signal "ramp-function generator active" for the following signals/messages:

"Speed setpoint - actual value deviation within tolerance t_on" (BO: r2199.4)

"Ramp-up/ramp-down completed" (BO: r2199.5)

Notice: The parameter may be protected as a result of p0922 or p2079 and cannot be changed.

Note: The binector input is automatically pre-assigned to r1199.2.

The following applies for SERVO:

The pre-assignment using the automatic calculation of the motor/control parameters in the drive (p0340 = 1, 3, 5) is only realized if, at the instant of the calculation, the "setpoint channel" function module is active (r0108.8 = 1). If the calculation in p0340 is not selected when downloading parameters, then the parameter is not pre-assigned.

p2149[0...n] Monitoring configuration / Monit config

SERVO, SERVO_AC, SERVO_I_AC

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Unsigned16	**Dyn. index:** DDS, p0180	**Func. diagram:** -
P-Group: Messages	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0000 0000 0000 0000 bin

Description: Sets the configuration for messages and monitoring functions.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Enable alarm A07903	Yes	No	8011
01	Load monitoring only in the 1st quadrant	Yes	No	8013
03	Reserved			-
15	Automatic parameterization carried out (p0340 = 1, p3900 > 0)	Yes	No	-

Dependency: Refer to: r2197

Refer to: A07903

Note: For bit 00:

Alarm A07903 is output when the bit is set with r2197.7 = 0 (n_set <> n_act).

For bit 01:

When the bit is set, the load monitoring is only executed in the 1st quadrant as a result of the positive characteristic parameters (p2182 ... p2190).

For bit 03:

When the bit is set, r2197.1 and r2197.2 are determined using separate hysteresis functions.

For bit 15:

The bit indicates whether the automatic parameterization (p0340 = 1, p3900 > 0) for the parameters of the extended monitoring functions was carried out.

If the bit is not set (e.g. when the configuration is activated (p0108.15)), the parameterization is automatically carried out during booting even if r3925.0 is already 1.

p2149[0...n] Monitoring configuration / Monit config

VECTOR, VECTOR_AC, VECTOR_I_AC

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Unsigned16	**Dyn. index:** DDS, p0180	**Func. diagram:** -
P-Group: Messages	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0000 0000 0000 0001 bin

Description: Sets the configuration for messages and monitoring functions.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Enable alarm A07903	Yes	No	8011
01	Load monitoring only in the 1st quadrant	Yes	No	8013
03	Reserved			-
06	Enable underspeed monitoring	Yes	No	8010
15	Automatic parameterization carried out (p0340 = 1, p3900 > 0)	Yes	No	-

Dependency: Refer to: r2197

Refer to: A07903

Note: For bit 00:

Alarm A07903 is output when the bit is set with r2197.7 = 0 (n_set <> n_act).

For bit 01:

When the bit is set, the load monitoring is only executed in the 1st quadrant as a result of the positive characteristic parameters (p2182 ... p2190).

For bit 03:

When the bit is set, r2197.1 and r2197.2 are determined using separate hysteresis functions.

For bit 06:

When the bit is set, with r2197.1 = 1 (n_act < p2155 speed threshold value 2), then alarm A08721 is output, and with r2199.0 = 1 (n_act < p2161 speed threshold value 3), then fault F07822 is output.

For separately excited synchronous motors (without encoder) in torque control (p1501 set), the underspeed speed monitoring is automatically activated if conditions (p0300 = 5, p1300 = 20) for the automatic pre-assignment of the threshold values during commissioning (p0340 = 1) are fulfilled.

The alarm threshold p2155 is preassigned with 1.5 * p1755 - and the fault threshold p2161, with p1755.

For bit 15:

The bit indicates whether the automatic parameterization (p0340 = 1, p3900 > 0) for the parameters of the extended monitoring functions was carried out.

If the bit is not set (e.g. when the configuration is activated (p0108.15)), the parameterization is automatically carried out during booting even if r3925.0 is already 1.

p2150[0...n] Hysteresis speed 3 / n_hysteresis 3

p2155[0...n] Speed threshold 2 / n_thresh val 2

VECTOR, VECTOR_AC, VECTOR_I_AC

Can be changed: U, T	**Calculated:** CALC_MOD_LIM_REF	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 8010
P-Group: Messages	**Unit group:** 3_1	**Unit selection:** p0505
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.00 [rpm]	210000.00 [rpm]	900.00 [rpm]

Description: Sets the speed threshold value for the following messages:

"|n_act| < = speed threshold value 2" (BO: r2197.1)

"|n_act| > speed threshold value 2" (BO: r2197.2)

Dependency: Refer to: p2140, r2197

Caution: The filter monitoring function is deactivated with p2155 = 0.0.

Note: The parameter is used as alarm threshold for underspeed monitoring.

Monitoring for an underspeed condition is automatically activated internally for encoderless separately-excited synchronous motors in closed-loop torque controlled operation (p0300 = 5, p1300 = 20, p1501 = 1 signal) - and can be manually activated with p2149.6 = 1.

For separately excited synchronous motors, when exiting commissioning (p0340 = 5), this parameter is automatically assigned 1.5 * p1755.

p2156[0...n] On delay comparison value reached / t_on cmpr val rchd

SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC

Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.00 [m/min]	1000.00 [m/min]	0.05 [m/min]

Description: Sets the velocity threshold value for the signal "|v_act| < velocity threshold value 3" (BO: r2199.0).

Dependency: Refer to: p2142, r2199

p2161[0...n] Speed threshold 3 / n_thresh val 3

VECTOR, VECTOR_AC, VECTOR_I_AC

Can be changed: U, T	**Calculated:** CALC_MOD_LIM_REF	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 8010, 8011
P-Group: Messages	**Unit group:** 3_1	**Unit selection:** p0505
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.00 [rpm]	210000.00 [rpm]	5.00 [rpm]

Description: Sets the speed threshold value for the signal "|n_act| < speed threshold value 3" (BO: r2199.0).

Dependency: Refer to: p2142, r2199

Caution: The threshold monitoring function is deactivated with p2161 = 0.0.

Note: The parameter is used as fault threshold for underspeed monitoring

Monitoring for an underspeed condition is automatically activated internally for encoderless separately-excited synchronous motors in closed-loop torque controlled operation (p0300 = 5, p1300 = 20, p1501 = 1 signal) - and can be manually activated with p2149.6 = 1.

For separately excited synchronous motors, when exiting commissioning (p0340 = 5), this parameter is automatically assigned p1755.

p2162[0...n] Hysteresis speed n_act > n_max / Hyst n_act>n_max

SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC

Can be changed: U, T	**Calculated:** CALC_MOD_LIM_REF	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 8010
P-Group: Messages	**Unit group:** 3_1	**Unit selection:** p0505
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.00 [rpm]	60000.00 [rpm]	0.00 [rpm]

Description: Sets the hysteresis speed (bandwidth) for the signal "n_act > n_max" (BO: r2197.6).

Dependency: Refer to: r1084, r1087, r2197

Notice: For p0322 = 0, the following applies: p2162 <= 0.1 * p0311

For p0322 > 0, the following applies: p2162 <= 1.02 * p0322 - p1082

If one of the conditions is violated, p2162 is appropriately and automatically reduced when exiting the commissioning mode.

Note: For a negative speed limit (r1087) the hysteresis is effective below the limit value and for a positive speed limit (r1084) above the limit value.

If significant overshoot occurs in the maximum speed range (e.g. due to load shedding), you are advised to increase the dynamic response of the speed controller (if possible). If this is insufficient, the hysteresis p2162 can only be increased by more than 10% of the rated speed when the maximum speed (p0322) of the motor is sufficiently greater than the speed limit p1082.

p2162[0...n] Hysteresis velocity v_act > v_max / Hyst v_act>v_max

SERVO (Lin), HLA, SERVO_AC (Lin), SERVO_I_AC (Lin)

Can be changed: U, T	**Calculated:** CALC_MOD_LIM_REF	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 8010
P-Group: Messages	**Unit group:** 4_1	**Unit selection:** p0505
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.00 [m/min]	1000.00 [m/min]	6.00 [m/min]

Description: Sets the hysteresis velocity (bandwidth) for the signal "v_act > v_max" (BO: r2197.6).

Dependency: Refer to: r1084, r1087, r2197

Notice: For p0322 = 0, the following applies: p2162 <= 0.1 * p0311

For p0322 > 0, the following applies: p2162 <= 1.02 * p0322 - p1082

If one of the conditions is violated, p2162 is appropriately and automatically reduced when exiting the commissioning mode.

Note: For a negative velocity limit (r1087) the hysteresis is effective below the limit value and for a positive velocity limit (r1084) above the limit value.

Dependency: Refer to: p0500, p2177, r2198
Refer to: F07900

p2175[0...n] Motor blocked velocity threshold / Mot lock v_thresh

SERVO (Lin), SERVO_AC (Lin), SERVO_I_AC (Lin)

Can be changed: U, T	**Calculated:** CALC_MOD_LIM_REF	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 8012
P-Group: Messages	**Unit group:** 4_1	**Unit selection:** p0505
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.00 [m/min]	1000.00 [m/min]	1.20 [m/min]

Description: Sets the velocity threshold for the message "Motor blocked" (BO: r2198.6).

Dependency: Refer to: p0500, p2177, r2198
Refer to: F07900

p2175[0...n] Motor blocked speed threshold / Mot lock n_thresh

VECTOR, VECTOR_AC, VECTOR_I_AC

Can be changed: U, T	**Calculated:** CALC_MOD_LIM_REF	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 8012
P-Group: Messages	**Unit group:** 3_1	**Unit selection:** p0505
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.00 [rpm]	210000.00 [rpm]	120.00 [rpm]

Description: Sets the speed threshold for the message "Motor blocked" (BO: r2198.6).

Dependency: Refer to: p0500, p2177, r2198

Refer to: F07900

Note: The following applies for sensorless vector control for induction motors:

At low speeds in open-loop speed controlled operation (see p1755, p1756), a blocked motor cannot be detected.

The following applies for sensorless vector control for permanent magnet synchronous motors:

At low speeds in open-loop speed controlled operation (see p1755, p1756), a blocked motor can only be detected if p2175 = p1755, and p1750.6 is set to 1.

p2177[0...n] Motor blocked delay time / Mot lock t_del

HLA

Can be changed: U, T	**Calculated:** CALC_MOD_LIM_REF	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** -
P-Group: Messages	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.000 [s]	65.000 [s]	1.000 [s]

Description: Sets the delay time for the message "Motor locked".

Dependency: Refer to: p0500, p2175, r2198

Refer to: F07900

p2177[0...n] Motor blocked delay time / Mot lock t_del

SERVO, SERVO_AC, SERVO_I_AC

Can be changed: U, T	**Calculated:** CALC_MOD_LIM_REF	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 8012
P-Group: Messages	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.000 [s]	65.000 [s]	1.000 [s]

Description: Sets the delay time for the message "Motor blocked" (BO: r2198.6).

Dependency: Refer to: p0500, p2175, r2198

Refer to: F07900

p2177[0...n] Motor blocked delay time / Mot lock t_del

VECTOR, VECTOR_AC, VECTOR_I_AC

Can be changed: U, T	**Calculated:** CALC_MOD_LIM_REF	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 8012
P-Group: Messages	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.000 [s]	65.000 [s]	1.000 [s]

Description: Sets the delay time for the message "Motor blocked" (BO: r2198.6).

Dependency: Refer to: p0500, p2175, r2198

Refer to: F07900

Note: The following applies for sensorless vector control:

At low speeds a locked motor can only be detected if no change is made to open-loop speed controlled operation. If this is the case, the value in p2177 must be reduced accordingly (p2177 < p1758) before time p2177 has elapsed in order to detect the locked state reliably.

As countermeasure, it is generally also possible to set p1750.6. This is only not permitted if the drive is slowly reversed by the load at the torque limit (speed below p1755 for longer than p1758).

p2178[0...n] Motor stalled delay time / Mot stall t_del

VECTOR, VECTOR_AC, VECTOR_I_AC

Can be changed: U, T	**Calculated:** CALC_MOD_REG	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 8012
P-Group: Messages	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.000 [s]	10.000 [s]	0.010 [s]

Description: Sets the delay time for the message "Motor stalled" (BO: r2198.7).

Dependency: Refer to: r2198

p2181[0...n] Load monitoring response / Load monit resp

SERVO (Ext msg), VECTOR (Ext msg), SERVO_AC (Ext msg), VECTOR_AC (Ext msg), SERVO_I_AC (Ext msg), VECTOR_I_AC (Ext msg)

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Integer16	**Dyn. index:** DDS, p0180	**Func. diagram:** 8013
P-Group: Messages	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	6	0

Description: Sets the response when evaluating the load monitoring.

Value:
0: Load monitoring disabled
1: A07920 for torque/speed too low
2: A07921 for torque/speed too high
3: A07922 for torque/speed out of tolerance
4: F07923 for torque/speed too low
5: F07924 for torque/speed too high
6: F07925 for torque/speed out of tolerance

Dependency: Refer to: p2182, p2183, p2184, p2185, p2186, p2187, p2188, p2189, p2190, p2192, r2198

Refer to: A07920, A07921, A07922, F07923, F07924, F07925

Note: The response to the faults F07923 ... F07925 can be set.

This parameter setting has no effect on the generation of fault F07936.

p2182[0...n] Load monitoring velocity threshold 1 / v_thresh 1

SERVO (Ext msg, Lin), SERVO_AC (Ext msg, Lin), SERVO_I_AC (Ext msg, Lin)

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 8013
P-Group: Messages	**Unit group:** 4_1	**Unit selection:** p0505
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.00 [m/min]	1000.00 [m/min]	0.05 [m/min]

Description: Sets the speed/torque envelope curve for load monitoring.

The envelope curve (upper and lower envelope curve) is defined as follows based on 3 speed thresholds:

p2182 (n_threshold 1) --> p2185 (M_threshold 1, upper), p2186 (M_threshold 1, lower)

p2183 (n_threshold 2) --> p2187 (M_threshold 2, upper), p2188 (M_threshold 2, lower)

p2184 (n_threshold 3) --> p2189 (M_threshold 3, upper), p2190 (M_threshold 3, lower)

Dependency: The following applies: p2182 < p2183 < p2184

Refer to: p2183, p2184, p2185, p2186

Refer to: A07926

Note: In order that the load monitoring can reliably respond, the speed threshold p2182 should always be set lower than the minimum motor speed to be monitored.

p2182[0...n] Load monitoring speed threshold value 1 / n_thresh 1

SERVO (Ext msg), VECTOR (Ext msg), SERVO_AC (Ext msg), VECTOR_AC (Ext msg), SERVO_I_AC (Ext msg), VECTOR_I_AC (Ext msg)

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 8013
P-Group: Messages	**Unit group:** 3_1	**Unit selection:** p0505
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.00 [rpm]	210000.00 [rpm]	150.00 [rpm]

Description: Sets the speed/torque envelope curve for load monitoring.
The envelope curve (upper and lower envelope curve) is defined as follows based on 3 speed thresholds:
p2182 (n_threshold 1) --> p2185 (M_threshold 1, upper), p2186 (M_threshold 1, lower)
p2183 (n_threshold 2) --> p2187 (M_threshold 2, upper), p2188 (M_threshold 2, lower)
p2184 (n_threshold 3) --> p2189 (M_threshold 3, upper), p2190 (M_threshold 3, lower)

Dependency: The following applies: p2182 < p2183 < p2184
Refer to: p2183, p2184, p2185, p2186
Refer to: A07926

Note: In order that the load monitoring can reliably respond, the speed threshold p2182 should always be set lower than the minimum motor speed to be monitored.

p2183[0...n] Load monitoring velocity threshold 2 / v_thresh 2

SERVO (Ext msg, Lin), SERVO_AC (Ext msg, Lin), SERVO_I_AC (Ext msg, Lin)

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 8013
P-Group: Messages	**Unit group:** 4_1	**Unit selection:** p0505

Min	**Max**	**Factory setting**
0.00 [rpm]	210000.00 [rpm]	1500.00 [rpm]

Description: Sets the speed/torque envelope curve for load monitoring.

The envelope curve (upper and lower envelope curve) is defined as follows based on 3 speed thresholds:

p2182 (n_threshold 1) --> p2185 (M_threshold 1, upper), p2186 (M_threshold 1, lower)

p2183 (n_threshold 2) --> p2187 (M_threshold 2, upper), p2188 (M_threshold 2, lower)

p2184 (n_threshold 3) --> p2189 (M_threshold 3, upper), p2190 (M_threshold 3, lower)

Dependency: The following applies: p2182 < p2183 < p2184

Refer to: p2182, p2183, p2189, p2190

Refer to: A07926

Note: In order that the load monitoring can reliably respond, the speed threshold p2184 should always be set higher than the maximum motor speed to be monitored.

P-Group: Messages	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Display and BICO output for the second status word of the monitoring functions.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
04	|n_set| < p2161	Yes	No	8011
05	n_set > 0	Yes	No	8011
06	Motor blocked	Yes	No	8012
07	Motor stalled	Yes	No	8012
10	|M_set| < torque threshold value 1	Yes	No	8012
11	Load in the alarm range	Yes	No	8013
12	Load in the fault range	Yes	No	8013

Note: For bit 10:

The torque threshold value 1 is set in p2174.

For bit 12:

This bit is reset after the fault cause disappears, even if the fault itself is still present.

r2199.0...11 CO/BO: Status word monitoring 3 / ZSW monitor 3

SERVO, SERVO_AC, SERVO_I_AC

Can be changed: -	**Calculated:** -	**Access level:** 2
Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** 2537
P-Group: Messages	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Display and BICO output for the third status word of the monitoring functions.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	|n_act| < speed threshold value 3	Yes	No	8010
01	f or n comparison value reached or exceeded	Yes	No	8010
04	Speed setpoint - actual value deviation in tolerance t_on	Yes	No	8011
05	Ramp-up/ramp-down completed	Yes	No	8011
06	Current below the zero current threshold	Yes	No	8020
11	Torque utilization < torque threshold value 2	Yes	No	8012

Dependency: Refer to: F07913

Note: For bit 00:

The speed threshold value 3 is set in p2161.

For bit 01:

The comparison value is set in p2141. We recommend setting the hysteresis (p2142) for canceling the bit to a value lower than that in p2141. Otherwise, the bit is not reset.

For bit 11:

The torque threshold value 2 is set in p2194.

r2199.0...11 CO/BO: Status word monitoring 3 / ZSW monitor 3

SERVO (Lin), SERVO_AC (Lin), SERVO_I_AC (Lin)

Can be changed: -	**Calculated:** -	**Access level:** 2

P-Group: Messages	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Display and BICO output for the third status word of the monitoring functions.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	|n_act| < speed threshold value 3	Yes	No	8010
01	f or n comparison value reached or exceeded	Yes	No	8010
04	Speed setpoint - actual value deviation in tolerance t_on	Yes	No	8011
05	Ramp-up/ramp-down completed	Yes	No	8011
06	Current below the zero current threshold	Yes	No	8020
07	Speed deviation model/external intolerance	Yes	No	8012
11	Torque utilization < torque threshold value 2	Yes	No	8012
12	Excitation current out of tolerance (only SESM)	Yes	No	8020
13	I2t alarm threshold exceeded (only SESM)	Yes	No	8022
14	I2t fault threshold exceeded (only SESM)	Yes	No	8022

Dependency: Refer to: F07913

Note: SESM: separately excited synchronous motor

For bit 00:

The speed threshold value 3 is set in p2161.

For bit 01:

The comparison value is set in p2141. We recommend setting the hysteresis (p2142) for canceling the bit to a value lower than that in p2141. Otherwise, the bit is not reset.

For bit 11:

The torque threshold value 2 is set in p2194.

For bit 13:

The I2t monitoring detects when the alarm threshold is exceeded (p3243), outputs alarm A07823 and sets the status bit.

For bit 14:

The I2t monitoring detects when the fault threshold is exceeded (100 %), outputs fault A07824 and sets the status bit.

SERVO (Tech_ctrl), VECTOR (Tech_ctrl), SERVO_AC (Tech_ctrl), VECTOR_AC (Tech_ctrl), SERVO_I_AC (Tech_ctrl), VECTOR_I_AC (Tech_ctrl)

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** -
P-Group: Technology	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Display and BICO output for the status word of the fixed value selection of the technology controller.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Technology controller fixed value selected	Yes	No	7950, 7951

r2229 Technology controller number actual / Tec_ctrl No. act

SERVO (Tech_ctrl), VECTOR (Tech_ctrl), SERVO_AC (Tech_ctrl), VECTOR_AC (Tech_ctrl), SERVO_I_AC (Tech_ctrl), VECTOR_I_AC (Tech_ctrl)

Can be changed: -	**Calculated:** -	**Access level:** 2
Data type: Unsigned32	**Dyn. index:** -	**Func. diagram:** 7950
P-Group: Technology	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the number of the selected fixed setpoint of the technology controller.

Dependency: Refer to: r2224

p2230[0...n] Technology controller motorized potentiometer configuration / Tec_ctr mop config

SERVO (Tech_ctrl), VECTOR (Tech_ctrl), SERVO_AC (Tech_ctrl), VECTOR_AC (Tech_ctrl), SERVO_I_AC (Tech_ctrl), VECTOR_I_AC (Tech_ctrl)

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** DDS, p0180	**Func. diagram:** 7954
P-Group: Technology	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0000 0100 bin

Description: Sets the configuration for the motorized potentiometer of the technology controller.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Data save active	Yes	No	-
02	Initial rounding-off active	Yes	No	-
03	Non-volatile data save active for p2230.0 = 1	Yes	No	-
04	Ramp-function generator always active	Yes	No	-

Dependency: Refer to: r2231, p2240

Notice: The following prerequisites must be fulfilled in order to be able to save the setpoint in a non-volatile fashion:

- Firmware with V2.3 or higher.

- Control Unit 320 (CU320) with hardware version C or higher (module with NVRAM).

Note: For bit 00:

0: The setpoint for the motorized potentiometer is not saved and after ON is entered using p2240.

1: The setpoint for the motorized potentiometer is saved and after ON is entered using r2231. In order to save in a non-volatile fashion, bit 03 should be set to 1.

For bit 02:

0: Without initial rounding-off

1: With initial rounding-off.

The selected ramp-up/down time is correspondingly exceeded. The initial rounding-off is a sensitive way of specifying small changes (progressive reaction when keys are pressed). The jerk for initial rounding is independent of the ramp-up time and only depends on the selected maximum value (p2237).

It is calculated as follows:

r = 0.0001 x max(p2237, |p2238|) [%] / 0.13^2 [s^2]

The jerk is active until maximum acceleration is reached (a_max = p2237 [%] / p2247 [s] or a_max = p2238 [%] / p2248 [s]); after this, the drive continues to operate with constant, linear acceleration.

The higher the maximum acceleration (the lower that p2247 is), the longer the ramp-up time increases with respect to the set ramp-up time.

For bit 03:

0: Non-volatile data save deactivated.

1. The setpoint for the motorized potentiometer is saved in a non-volatile fashion (for p2230.0 = 1).

For bit 04:

When the bit is set, the ramp-function generator is computed independent of the pulse enable. The actual output value of the motorized potentiometer is always in r2250.

r2231 Technology controller motorized potentiometer setpoint memory / Tec_ctrl mop mem

SERVO (Tech_ctrl), VECTOR (Tech_ctrl), SERVO_AC (Tech_ctrl), VECTOR_AC (Tech_ctrl), SERVO_I_AC (Tech_ctrl), VECTOR_I_AC (Tech_ctrl)

p2252 Technology controller configuration / Tec_ctrl config

SERVO (Tech_ctrl), VECTOR (Tech_ctrl), SERVO_AC (Tech_ctrl), VECTOR_AC (Tech_ctrl), SERVO_I_AC (Tech_ctrl), VECTOR_I_AC (Tech_ctrl)

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** -
P-Group: Modulation	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0000 0000 0000 0111 bin

Description: Sets the configuration of the technology controller.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Ramp-up/down time independent of setpoint sign	Yes	No	-
01	Integrator independent of Kp	Yes	No	-
02	Output signal without ramp active	Yes	No	-
03	Actual value limit	Yes	No	-
07	Activate Kp adaptation	Yes	No	7958
08	Activate Tn adaptation	Yes	No	7958

Dependency: Refer to: p2257, p2258, p2267, p2268, p2280, p2285

Note: For bit 00 = 0:

The ramp-down time (p2258) switches to the ramp-up time (p2257) when the sign for the output signal r2260 changes. When the sign changes, the output signal is kept at zero for one arithmetic cycle.

For bit 00 = 1:

When r2260 exhibits a positive gradient, the ramp-up time (p2257) is active; when it exhibits a negative gradient, the ramp-down time (p2258) is active. The sign for r2260 does not have any effect on the ramp time.

For bit 01 = 0:

The integration time of the PID controller is evaluated with the gain factor Kp (p2280) (p2285 = integral time).

For bit 01 = 1:

The integration time of the PID controller is independent of the gain factor (p2285 = integration time) if p2280 > 0.

For bit 02 = 0:

When the PID controller is deactivated via p2200, the output signal r2294 is reduced to zero via the ramp-down time p2293.

For bit 02 = 1:

When the PID controller is deactivated via p2200, the output signal r2294 is set directly to zero.

For bit 03 = 0:

The actual values are not limited by p2267 and p2268.

For bit 03 = 1:

The actual values are limited by p2267 and p2268.

Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.00 [%]	500.00 [%]	100.00 [%]

Description: Sets the scaling factor for the actual value of the technology controller.

Dependency: Refer to: p2264, p2265, p2267, p2268, p2271

Note: For 100%, the actual value is not changed.

p2270 Technology controller actual value function / Tec_ctr ActVal fct

SERVO (Tech_ctrl), VECTOR (Tech_ctrl), SERVO_AC (Tech_ctrl), VECTOR_AC (Tech_ctrl), SERVO_I_AC (Tech_ctrl), VECTOR_I_AC (Tech_ctrl)

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Integer16	**Dyn. index:** -	**Func. diagram:** 7958
P-Group: Technology	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	3	0

Description: Setting to use an arithmetic function for the actual value signal of the technology controller.

Value:
0: Output (y) = input (x)
1: Root function (root from x)
2: Square function (x * x)
3: Cube function (x * x * x)

Dependency: Refer to: p2264, p2265, p2267, p2268, p2269, p2271

p2271 Technology controller actual value inversion (sensor type) / Tech_ctrl act inv

SERVO (Tech_ctrl), VECTOR (Tech_ctrl), SERVO_AC (Tech_ctrl), VECTOR_AC (Tech_ctrl), SERVO_I_AC (Tech_ctrl), VECTOR_I_AC (Tech_ctrl)

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: Integer16	**Dyn. index:** -	**Func. diagram:** 7958
P-Group: Technology	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	1	0

Description: Setting to invert the actual value signal of the technology controller.
The inversion depends on the sensor type for the actual value signal.

Value:
0: No inversion
1: Inversion actual value signal

Caution: If the actual value inversion is incorrectly selected, then the closed-loop control with the technology controller can become unstable and can oscillate!

Note: The correct setting can be determined as follows:
- inhibit the technology controller (p2200 = 0).
- increase the motor speed and in so doing, measure the actual value signal of the technology controller.
--> If the actual value increases as the motor speed increases, then p2271 should be set to 0 (no inversion).
--> If the actual value decreases as the motor speed increases, then p2271 should be set to 1 (the actual value signal is inverted).

P-Group: Technology	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	1	0

Description: Setting to invert the system deviation of the technology controller.
The setting depends on the type of control loop.

Value:
0: No inversion
1: Inversion

Caution: ⚠ If the actual value inversion is incorrectly selected, then the closed-loop control with the technology controller can become unstable and can oscillate!

Note: The correct setting can be determined as follows:
- inhibit the technology controller (p2200 = 0).
- increase the motor speed and in so doing, measure the actual value signal (of the technology controller).
- if the actual value increases with increasing motor speed, then the inversion should be switched out.
- if the actual value decreases with increasing motor speed, then the inversion should be set.
If value = 0:
The drive reduces the output speed when the actual value rises (e.g. for heating fans, intake pump, compressor).
If value = 1:
The drive increases the output speed when the actual value increases (e.g. for cooling fans, discharge pumps).

Description: Sets the signal source for the selection of the "Switch in motor" function.

When the function is selected, monitoring of the switches is deactivated with the "bypass" function. This means that the power unit can be connected to other motors via an external control without switch monitoring responding.

p2502[0...n] LR encoder assignment / Encoder assignment

SERVO (Pos ctrl), VECTOR (Pos ctrl), SERVO_AC (Pos ctrl), VECTOR_AC (Pos ctrl)

Can be changed: C2(25)	**Calculated:** -	**Access level:** 1
Data type: Integer16	**Dyn. index:** DDS, p0180	**Func. diagram:** 4010
P-Group: Closed loop position control	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	3	1

Description: Setting to assign the encoder.

The actual value preprocessing and the closed-loop position control are carried out using the assigned encoder.

Value:
0: No encoder
1: Encoder 1
2: Encoder 2
3: Encoder 3

Dependency: Refer to: p0187, p0188, p0189

Notice: For the setting p2502 = 0 (no encoder), closed-loop position control is not possible. This setting is only practical as supportive measure to implement encoderless closed-loop speed control (e.g. if the motor encoder is defective).

Note: The assigned encoder (p2502 = 1, 2, 3) must be allocated an encoder data set (p0187, p0188, p0189).

p2503[0...n] LR length unit LU per 10 mm / LU per 10 mm

Min	**Max**	**Factory setting**
-1048576	1048576	1

Description: Sets the load revolutions for the gearbox factor between the motor shaft and load shaft.

Gearbox factor = motor revolutions (p2504) / load revolutions (p2505)

Dependency: Refer to: p0432, p0433, p2504

Note: The gearbox factor between the encoder shaft and the motor shaft is set using p0432 and p0433.

p2506[0...n] LR length unit LU per load path / LU per load path

SERVO (APC, Lin, Pos ctrl), SERVO_AC (APC, Lin, Pos ctrl), SERVO_I_AC (APC, Lin)

Can be changed: C2(25)	**Calculated:** -	**Access level:** 1
Data type: Unsigned32	**Dyn. index:** DDS, p0180	**Func. diagram:** 4010
P-Group: Closed loop position control	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
1 [LU]	2147483647 [LU]	10000 [LU]

Description: Sets the neutral length units LU per load path.

Therefore, for a rotary encoder, a reference is established between the physical arrangement and the neutral length units LU used in the drive.

Example:

Rotary encoder, ballscrew with 10 mm/revolution, 10 mm should be broken down to units of µm (i.e. 1 LU = 1 µm).

--> One load path corresponds to 10000 LU

--> p2506 = 10000

Note: The position controller can only process position setpoints in the interpolator clock cycle (IPO clock cycle) in integer length units (LU, Length Unit). This is the reason that speed setpoints that are not a multiple integer of 1 LU per IPO clock cycle can only be realized as an average. The result speed setpoint steps are especially noticeable for a high loop gain or when the precontrol is active. Increasing p2506 counteracts this behavior.

p2506[0...n] LR length unit LU per load revolution / LU per load rev

SERVO (APC, Pos ctrl), VECTOR (Pos ctrl), SERVO_AC (APC, Pos ctrl), VECTOR_AC (Pos ctrl), SERVO_I_AC (APC)

Can be changed: C2(25)	**Calculated:** -	**Access level:** 1
Data type: Unsigned32	**Dyn. index:** DDS, p0180	**Func. diagram:** 4010
P-Group: Closed loop position control	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
1 [LU]	2147483647 [LU]	10000 [LU]

Description: Sets the neutral length units LU per load revolution.

Therefore, for a rotary encoder, a reference is established between the physical arrangement and the neutral length units LU used in the drive.

Example:

Rotary encoder, ballscrew with 10 mm/revolution, 10 mm should be broken down to units of µm (i.e. 1 LU = 1 µm).

--> One load revolution corresponds to 10000 LU

--> p2506 = 10000

Note: The position controller can only process position setpoints in the interpolator clock cycle (IPO clock cycle) in integer length units (LU, Length Unit). This is the reason that speed setpoints that are not a multiple integer of 1 LU per IPO clock cycle can only be realized as an average. The result speed setpoint steps are especially noticeable for a high loop gain or when the precontrol is active. Increasing p2506 counteracts this behavior.

p2507[0...n] LR absolute encoder adjustment status / Abs_enc_adj stat

SERVO (EPOS, Pos ctrl), VECTOR (EPOS, Pos ctrl), SERVO_AC (EPOS, Pos ctrl), VECTOR_AC (EPOS, Pos ctrl)

Can be changed: C2(25), U, T	**Calculated:** -	**Access level:** 1
Data type: Integer16	**Dyn. index:** EDS, p0140	**Func. diagram:** 4010
P-Group: Closed loop position control	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	4	1

Description: Activates the adjustment and display of the status of the adjustment for absolute encoders.

For p2507 = 2:

This initiates encoder adjustment. The status is displayed using the other values.

For p2507 = 4:

This means that the encoder adjustment offset (p2525) can be directly accepted after new commissioning, without having to approach the adjustment point.

Value:
0: Error occurred while adjusting
1: Absolute encoder not adjusted
2: Absolute encoder not adjusted and encoder adjustment initiated
3: Absolute encoder adjusted
4: Absolute encoder adjustment by accepting the offset

Dependency: Refer to: p2525, p2598, p2599, p2733

Caution: For rotating absolute encoders, when adjusting, a range is set up symmetrically around zero with half of the encoder range, within which the position must be re-established after switch-off/switch-on. In this range, it is only permissible that the encoder overflows.

After the adjustment has been completed, it must be guaranteed that the range is not exited. The reason for this is that outside the range, there is no clear reference any longer between the encoder actual value and mechanical system.

If the reference point (CI: p2598) lies in this range, then the position actual value is set when adjusting to the reference point. Otherwise, adjustment is canceled with F07443.

There is no overflow for linear absolute encoders. This means that after the adjustment, the position can be re-established in the complete traversing range after switch-off/switch-on. When adjusting, the position actual value is set to the reference point.

For p2507 = 4:

For an adjustment where the offset is accepted, the position actual value manifests a step.

Note: The data (p0971, p0977) must be retentively saved to permanently accept the determined position offset (p2525) and the number of the drive data set (p2733).

This adjustment can only be initiated for an absolute encoder.

p2508[0...3] BI: LR activate reference mark search / Ref_mark act

SERVO (Pos ctrl), VECTOR (Pos ctrl), SERVO_AC (Pos ctrl), VECTOR_AC (Pos ctrl)

Can be changed: C2(25), T	**Calculated:** -	**Access level:** 1
Data type: Unsigned32 / Binary	**Dyn. index:** -	**Func. diagram:** 4010
P-Group: Closed loop position control	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0

Description: Sets the signal source for the function "activate reference mark search".

Index:
[0] = Position control
[1] = Encoder 1
[2] = Encoder 2
[3] = Encoder 3

Dependency: Refer to: p0490, p0495, p2502, p2509, r2684

Refer to: A07495

Notice: When activating the function "set position actual value" while the function "reference mark search" is activated, then the function "reference mark search" is automatically deactivated.

Note: When the function module "basic positioner" (r0108.4 = 1) is activated, the following BICO interconnection is established:

BI: p2508[0] = r2684.0

The function can only be activated using a 0/1 signal if no reference function is active (r2526.2).

If "reference mark search" and "measuring probe evaluation" are simultaneously activated, then no function is activated and the actual function is interrupted.

p2509[0...3] BI: LR activate measuring probe evaluation / MT_eval act

SERVO (Pos ctrl), VECTOR (Pos ctrl), SERVO_AC (Pos ctrl), VECTOR_AC (Pos ctrl)

Can be changed: C2(25), T	**Calculated:** -	**Access level:** 1

Description: Sets the input terminal for direct measuring probe 1.

The direct measuring probe can either be parameterized as a non-cyclic (value 1 ... 8) or a cyclic (value 11 ... 18) measuring probe.

After it has been activated via binector input: p2509 = 0/1 signal, the non-cyclic measuring probe measures once and can be used with EPOS.

After it has been activated via the p2509 = 1 signal, the cyclic measuring probe measures cyclically and cannot be used with EPOS.

In order to process signals faster, the direct measuring probe bypasses the handshake technique via the encoder control word and encoder status word.

Value:
0: No measuring probe
1: DI/DO 9 (X122.10/X121.8)
2: DI/DO 10 (X122.12/X121.10)
3: DI/DO 11 (X122.13/X121.11)
4: DI/DO 13 (X132.10/X131.2)
5: DI/DO 14 (X132.12/X131.4)
6: DI/DO 15 (X132.13/X131.5)
7: DI/DO 8 (X122.9/X121.7)
8: DI/DO 12 (X132.9/X131.1)

11: DI/DO 9 cyclic
12: DI/DO 10 cyclic
13: DI/DO 11 cyclic
14: DI/DO 13 cyclic
15: DI/DO 14 cyclic
16: DI/DO 15 cyclic
17: DI/DO 8 cyclic
18: DI/DO 12 cyclic
50: DI/DO 0 distributed (X3.2)
51: DI/DO 1 distributed (X3.4)

Index: [0] = Encoder 1
[1] = Encoder 2
[2] = Encoder 3

Dependency: Refer to: p0490, p0728, p2509, p2510, p2511

Caution: In order to prevent incorrect measurement values, these parameters may not be written during an active measurement.

Notice: To select the values:

For CX32, NX10 and NX15, only DI/DO 8, 9, 10, 11 can be selected as fast inputs (refer to the Equipment Manual).

Regarding the terminal designation:

The first designation is valid for CU320, the second for CU310.

Note: DI/DO: Bidirectional Digital Input/Output

The terminal must be set as input (p0728).

If a parameter change is rejected, a check should be performed as to whether the input terminal is already being used in p0488, p0489, p0493, p0494, p0495, p0580 or p0680.

Direct measurement via p2517 has a higher priority than measurements via p0488.

For the direct measuring probe evaluation, the DP clock cycle must be integer multiple of the position controller clock cycle.

p2519[0...n] LR position actual value preprocessing config. DDS changeover / s_act config DDS

SERVO (Pos ctrl), VECTOR (Pos ctrl), SERVO_AC (Pos ctrl), VECTOR_AC (Pos ctrl)

Can be changed: C2(25), U, T	**Calculated:** -	**Access level:** 4
Data type: Integer16	**Dyn. index:** DDS, p0180	**Func. diagram:** -
P-Group: Closed loop position control	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	5	1

Description: Sets the behavior of the position actual value preprocessing for the position controller for a DDS changeover.

For p2519 = 1:

In the following cases, for a DDS changeover, the actual position actual value becomes invalid and the reference point is reset:

- the EDS effective for the closed-loop position control changes.
- the encoder assignment changes (p2502).
- the mechanical relationships change (p2503 ... p2506).
- the direction of rotation changes (p1821).

For absolute encoders, the status of the adjustment (p2507) is also reset if the same absolute encoder remains selected for the closed-loop position control, but the mechanical relationships or the direction of rotation have changed.

In the operation state, in addition, a fault (F07494) is generated.

Notice: The remaining setting values are intended for expanded functionality.

Note: The behavior for a DDS changeover is determined using the value of p2519 in the target data set.

Description: Sets the signal source for the velocity setpoint of the position controller.

Dependency: Refer to: r2666

Note: When the function module "basic positioner" (r0108.4 = 1) is activated, the following BICO interconnection is established:

BI: p2531 = r2666

p2532 CI: LR position actual value / s_act

SERVO (Pos ctrl), VECTOR (Pos ctrl), SERVO_AC (Pos ctrl), VECTOR_AC (Pos ctrl)

Can be changed: C2(25), T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32 / Integer32	**Dyn. index:** -	**Func. diagram:** 4015, 4020, 4025
P-Group: Closed loop position control	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	2521[0]

Description: Sets the signal source for the position actual value of the position controller.

Dependency: Refer to: r2521

p2533[0...n] LR position setpoint filter time constant / s_set_filt T

SERVO (Pos ctrl), VECTOR (Pos ctrl), SERVO_AC (Pos ctrl), VECTOR_AC (Pos ctrl)

Can be changed: C2(25), U, T	**Calculated:** -	**Access level:** 1
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 4015
P-Group: Closed loop position control	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.00 [ms]	1000.00 [ms]	0.00 [ms]

Description: Sets the time constant for the position setpoint filter (PT1).

Note: The effective Kv factor (position loop gain) is reduced with the filter. This allows a softer control behavior with improved tolerance with respect to noise/disturbances.

Applications:

- reduces the precontrol dynamic response.
- jerk limiting.

p2534[0...n] LR velocity precontrol factor / v_prectrl fact

SERVO (Lin, Pos ctrl), SERVO_AC (Lin, Pos ctrl)

Can be changed: C2(25), U, T	**Calculated:** -	**Access level:** 1
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 4015, 4025
P-Group: Closed loop position control	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.00 [%]	200.00 [%]	0.00 [%]

Description: Setting to activate and weight the velocity precontrol value.

Value = 0 % --> The precontrol is deactivated.

Dependency: Refer to: p2535, p2536, r2563

Note: When the axis control loop is optimally set as well as a precisely determined equivalent time constant of the velocity control loop, the precontrol factor is 100%.

p2534[0...n] LR speed precontrol factor / n_prectrl fact

SERVO (Pos ctrl), VECTOR (Pos ctrl), SERVO_AC (Pos ctrl), VECTOR_AC (Pos ctrl)

Can be changed: C2(25), U, T	**Calculated:** -	**Access level:** 1
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 4015, 4025
P-Group: Closed loop position control	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.00 [%]	200.00 [%]	0.00 [%]

Description: Setting for activation and weighting of the speed precontrol value.

Value = 0 % --> The precontrol is deactivated.

Dependency: Refer to: p2535, p2536, r2563

Note: When the axis control loop is optimally set as well as a precisely determined equivalent time constant of the speed control loop, the precontrol factor is 100%.

p2535[0...n] LR velocity precontrol symmetrizing filter dead time / v_prectrFlt t_dead

SERVO (Lin, Pos ctrl), SERVO_AC (Lin, Pos ctrl)

Can be changed: C2(25), U, T	**Calculated:** -	**Access level:** 1
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 4015
P-Group: Closed loop position control	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.00	2.00	0.00

Description: Sets the "fractional" dead time to emulate the timing behavior of the velocity control loop.

The selected multiplier refers to the position controller clock cycle (dead time= p2535 * p0115[4]).

Dependency: Refer to: p0115, p2536

Notice: When velocity precontrol is active (p2534 > 0 %), the following applies:

In addition to the set dead time (p2535), internally two position controller clock cycles are effective.

When velocity precontrol is inactive (p2534 = 0 %), the following applies:

No dead time is effective (p2535 and internal).

Note: Together with p2536, the timing behavior of the velocity control loop can be emulated.

p2535[0...n] LR speed precontrol symmetrizing filter dead time / n_prectrFlt t_dead

SERVO (Pos ctrl), VECTOR (Pos ctrl), SERVO_AC (Pos ctrl), VECTOR_AC (Pos ctrl)

Can be changed: C2(25), U, T	**Calculated:** -	**Access level:** 1
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 4015
P-Group: Closed loop position control	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.00	2.00	0.00

Description: Sets the "fractional" dead time to emulate the timing behavior of the speed control loop.

The selected multiplier refers to the position controller sampling time (dead time= p2535 * p0115[4]).

Dependency: Refer to: p0115, p2536

Notice: When speed precontrol is active (p2534 > 0 %), the following applies:
In addition to the set dead time (p2535), internally two position controller sampling times are effective.
When speed precontrol is inactive (p2534 = 0 %), the following applies:
No dead time is effective (p2535 and internal).

Note: Together with p2536, the timing behavior of the closed-loop control loop can be emulated.

p2536[0...n] LR velocity precontrol symmetrizing filter PT1 / v_prectrl filt PT1

SERVO (Lin, Pos ctrl), SERVO_AC (Lin, Pos ctrl)

Can be changed: C2(25), U, T	**Calculated:** -	**Access level:** 1
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 4015
P-Group: Closed loop position control	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.00 [ms]	100.00 [ms]	0.00 [ms]

Description: Sets a PT1 filter to emulate the timing behavior of the velocity control loop.

Dependency: Refer to: p2535

Notice: When velocity precontrol is inactive (p2534 = 0 %), the following applies:
If a PT1 filter has been set, it is not effective.

Note: Together with p2535, the timing behavior of the velocity control loop can be emulated.

p2536[0...n] LR speed precontrol symmetrizing filter PT1 / n_prectrl filt PT1

SERVO (Pos ctrl), VECTOR (Pos ctrl), SERVO_AC (Pos ctrl), VECTOR_AC (Pos ctrl)

Can be changed: C2(25), U, T	**Calculated:** -	**Access level:** 1
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 4015
P-Group: Closed loop position control	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.00 [ms]	100.00 [ms]	0.00 [ms]

Description: Sets a PT1 filter to emulate the timing behavior of the closed-speed control loop.

Dependency: Refer to: p2535

Notice: When speed precontrol is inactive (p2534 = 0 %), the following applies:
If a PT1 filter has been set, it is not effective.

Note: Together with p2535, the timing behavior of the closed-loop control loop can be emulated.

p2537 CI: LR position controller adaptation / Adaptation

SERVO (Pos ctrl), VECTOR (Pos ctrl), SERVO_AC (Pos ctrl), VECTOR_AC (Pos ctrl)

Can be changed: C2(25), T	**Calculated:** -	**Access level:** 1
Data type: Unsigned32 / FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 4015
P-Group: Closed loop position control	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** PERCENT	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	1

Description: Sets the signal source for the adaptation of the proportional gain of the position controller.

Dependency: Refer to: p2538

p2538[0...n] LR proportional gain / Kp

SERVO (Pos ctrl), VECTOR (Pos ctrl), SERVO_AC (Pos ctrl), VECTOR_AC (Pos ctrl)

Can be changed: C2(25), U, T	**Calculated:** -	**Access level:** 1
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 4015
P-Group: Closed loop position control	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.000 [1000 rpm]	300.000 [1000 rpm]	1.000 [1000 rpm]

Description: Sets the proportional gain (P gain, position loop gain, Kv factor) of the position controller.

Dependency: Refer to: p2537, p2539, p2555, r2557, r2558

Note: The proportional gain is used define at which traversing velocity which following error is obtained (without precontrol)
Low proportional gain:
Slow response to a setpoint - actual value difference, the following error becomes large.
High proportional gain:
Fast response to the setpoint - actual value difference, the following error becomes small.

p2539[0...n] LR integral time / Tn

SERVO (Pos ctrl), VECTOR (Pos ctrl), SERVO_AC (Pos ctrl), VECTOR_AC (Pos ctrl)

Can be changed: C2(25), U, T	**Calculated:** -	**Access level:** 1
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 4015
P-Group: Closed loop position control	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.00 [ms]	100000.00 [ms]	0.00 [ms]

Description: Setting to activate the integral time of the position controller.
Value = 0 ms --> The I component of the position controller is deactivated.

Dependency: Refer to: p2538, r2559

p2540 CO: LR position controller output velocity limit / LR_outp v_lim

SERVO (Lin, Pos ctrl), SERVO_AC (Lin, Pos ctrl)

Can be changed: C2(25), U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 4015

Not for motor type: -	**Scaling:** p2000	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	2540[0]

Description: Sets the signal source for the position controller output limit.

Dependency: Refer to: p2540

p2542 LR standstill window / Standstill window

SERVO (Pos ctrl), VECTOR (Pos ctrl), SERVO_AC (Pos ctrl), VECTOR_AC (Pos ctrl)

Can be changed: C2(25), U, T	**Calculated:** -	**Access level:** 1
Data type: Unsigned32	**Dyn. index:** -	**Func. diagram:** 4020
P-Group: Closed loop position control	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0 [LU]	2147483647 [LU]	200 [LU]

Description: Sets the standstill window for the standstill monitoring function.

After the standstill monitoring time expires, it is cyclically checked whether the difference between the setpoint and actual position is located within the standstill window and, if required, an appropriate fault is output.

Value = 0 --> The standstill monitoring is deactivated.

Dependency: Refer to: p2543, p2544

Refer to: F07450

Note: The following applies for the setting of the standstill window and positioning window:

Standstill window (p2542) >= positioning window (p2544)

p2543 LR standstill monitoring time / t_standstill monit

SERVO (Pos ctrl), VECTOR (Pos ctrl), SERVO_AC (Pos ctrl), VECTOR_AC (Pos ctrl)

Can be changed: C2(25), U, T	**Calculated:** -	**Access level:** 1
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 4020
P-Group: Closed loop position control	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.00 [ms]	100000.00 [ms]	200.00 [ms]

Description: Sets the standstill monitoring time for the standstill monitoring function.

After the standstill monitoring time expires, it is cyclically checked whether the difference between the setpoint and actual position is located within the standstill window and, if required, an appropriate fault is output.

Dependency: Refer to: p2542, p2545

Refer to: F07450

Note: The following applies for the setting of the standstill and positioning monitoring time:

Standstill monitoring time (p2543) <= positioning monitoring time (p2545)

p2544 LR positioning window / Pos_window

SERVO (Pos ctrl), VECTOR (Pos ctrl), SERVO_AC (Pos ctrl), VECTOR_AC (Pos ctrl)

Can be changed: C2(25), U, T	**Calculated:** -	**Access level:** 1
Data type: Unsigned32	**Dyn. index:** -	**Func. diagram:** 4020
P-Group: Closed loop position control	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0 [LU]	2147483647 [LU]	40 [LU]

Description: Sets the positioning window for the positioning monitoring function.

After the positioning monitoring time expires, it is checked once as to whether the difference between the setpoint and actual position lies within the positioning window and if required an appropriate fault is output.

Value = 0 --> The positioning monitoring function is deactivated.

Dependency: Refer to: p2542, p2545, r2684

Refer to: F07451

Note: The following applies for the setting of the standstill and positioning window:

Standstill window (p2542) >= positioning window (p2544)

p2545 LR positioning monitoring time / t_pos_monit

SERVO (Pos ctrl), VECTOR (Pos ctrl), SERVO_AC (Pos ctrl), VECTOR_AC (Pos ctrl)

Can be changed: C2(25), U, T	**Calculated:** -	**Access level:** 1
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 4020
P-Group: Closed loop position control	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.00 [ms]	100000.00 [ms]	1000.00 [ms]

Description: Sets the positioning monitoring time for the positioning monitoring.

After the positioning monitoring time expires, it is checked once as to whether the difference between the setpoint and actual position lies within the positioning window and if required an appropriate fault is output.

Dependency: Refer to: p2543, p2544, r2684

Refer to: F07451

Note: The following applies for the setting of the standstill and positioning monitoring time:

Standstill monitoring time (p2543) <= positioning monitoring time (p2545)

p2546[0...n] LR dynamic following error monitoring tolerance / s_delta_monit tol

SERVO (Pos ctrl), VECTOR (Pos ctrl), SERVO_AC (Pos ctrl), VECTOR_AC (Pos ctrl)

Can be changed: C2(25), U, T	**Calculated:** -	**Access level:** 1
Data type: Unsigned32	**Dyn. index:** DDS, p0180	**Func. diagram:** 4025
P-Group: Closed loop position control	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0 [LU]	2147483647 [LU]	1000 [LU]

Description: Sets the tolerance for the dynamic following error monitoring.

If the dynamic following error (r2563) exceeds the selected tolerance, then an appropriate fault is output.

Value = 0 --> The dynamic following error monitoring is deactivated.

Dependency: Refer to: r2563, r2684

Refer to: F07452

Note: The tolerance bandwidth is intended to prevent the dynamic following error monitoring incorrectly responding due to operational control sequences (e.g. during load surges).

p2547 LR cam switching position 1 / Cam position 1

SERVO (Pos ctrl), VECTOR (Pos ctrl), SERVO_AC (Pos ctrl), VECTOR_AC (Pos ctrl)

Min	**Max**	**Factory setting**
- [m/min]	- [m/min]	- [m/min]

Description: Display and connector output for the total velocity setpoint.
This value is obtained from the sum of the velocity precontrol and position controller output.

Dependency: Refer to: r2560, r2561

r2562 CO: LR total speed setpoint / n_set total

SERVO (Pos ctrl), VECTOR (Pos ctrl), SERVO_AC (Pos ctrl), VECTOR_AC (Pos ctrl)

Can be changed: -	**Calculated:** -	**Access level:** 1
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 4015
P-Group: Closed loop position control	**Unit group:** 3_1	**Unit selection:** p0505
Not for motor type: -	**Scaling:** p2000	**Expert list:** 1
Min	**Max**	**Factory setting**
- [rpm]	- [rpm]	- [rpm]

Description: Display and connector output for the total speed setpoint.
This value is obtained from the sum of the speed precontrol and position controller output.

Dependency: Refer to: r2560, r2561

r2563 CO: LR following error dynamic model / Follow error dyn

SERVO (Pos ctrl), VECTOR (Pos ctrl), SERVO_AC (Pos ctrl), VECTOR_AC (Pos ctrl)

Can be changed: -	**Calculated:** -	**Access level:** 1
Data type: Integer32	**Dyn. index:** -	**Func. diagram:** 4025
P-Group: Closed loop position control	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
- [LU]	- [LU]	- [LU]

Description: Display and connector output for the dynamic following error.

This value is the deviation, corrected by the velocity-dependent component, between the position setpoint and the position actual value.

Note: For p2534 >= 100 % (precontrol activated) the following applies:

The dynamic following error (r2563) corresponds to the system deviation (r2557) at the position controller input.

For 0 % < p2534 < 100 % (precontrol activated) or p2534 = 0 % (precontrol deactivated) the following applies:

The dynamic following error (r2563) is the deviation between the measured position actual value and a value that is calculated from the position setpoint via a PT1 model. This compensates the system-related velocity-dependent system deviation for a P controller.

r2564 CO: LR force precontrol value / F_prectrl val

SERVO (Lin, Pos ctrl), SERVO_AC (Lin, Pos ctrl)

Can be changed: -	**Calculated:** -	**Access level:** 1
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 4015
P-Group: Closed loop position control	**Unit group:** 8_1	**Unit selection:** p0505
Not for motor type: -	**Scaling:** p2003	**Expert list:** 1
Min	**Max**	**Factory setting**
- [N]	- [N]	- [N]

Description: Display and connector output for the force setpoint.

Dependency: Refer to: p1511, p1512

Note: The force precontrol value is the derivation over time of the velocity precontrol value and is referred to a high inertia mass of 1000.0 kg. When using the precontrol, then this should be evaluated corresponding to the actual mass.

r2564 CO: LR torque precontrol value / M_prectrl val

SERVO (Pos ctrl), VECTOR (Pos ctrl), SERVO_AC (Pos ctrl), VECTOR_AC (Pos ctrl)

Can be changed: -	**Calculated:** -	**Access level:** 1
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 4015
P-Group: Closed loop position control	**Unit group:** 7_1	**Unit selection:** p0505
Not for motor type: -	**Scaling:** p2003	**Expert list:** 1
Min	**Max**	**Factory setting**
- [Nm]	- [Nm]	- [Nm]

Description: Display and connector output for the torque precontrol value.

Dependency: Refer to: p1511, p1512

Note: The torque precontrol value is the derivation over time of the speed precontrol value and is referred to a moment of inertia of 1 kgm^2/2 PI. When using the precontrol, then this should be evaluated corresponding to the actual moment of inertia.

r2565 CO: LR following error actual / Following err act

SERVO (Pos ctrl), VECTOR (Pos ctrl), SERVO_AC (Pos ctrl), VECTOR_AC (Pos ctrl)

Can be changed: -	**Calculated:** -	**Access level:** 1
Data type: Integer32	**Dyn. index:** -	**Func. diagram:** 4015
P-Group: Closed loop position control	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
- [LU]	- [LU]	- [LU]

Description: Display and connector output for the actual following error.

This value is the deviation between the position setpoint - after fine interpolation - and the position actual value.

Notice: When speed precontrol is active (p2534 > 0 %), the following applies:

To calculate this value, the position setpoint is delayed by two position controller sampling times.

When speed precontrol is inactive (p2534 = 0 %), the following applies:

To calculate this value, the position setpoint is delayed by two position controller clock cycles.

r2566 LR velocity input precontrol / v inp prectrl

SERVO (Lin, Pos ctrl), SERVO_AC (Lin, Pos ctrl)

Can be changed: -	**Calculated:** -	**Access level:** 1
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 4015
P-Group: Closed loop position control	**Unit group:** 4_1	**Unit selection:** p0505
Not for motor type: -	**Scaling:** p2000	**Expert list:** 1
Min	**Max**	**Factory setting**
- [m/min]	- [m/min]	- [m/min]

Description: Displays the velocity at the input of the precontrol channel.

Note: This display parameter is used for diagnostics even when the precontrol is inactive (p2534 = 0%).

r2566 LR speed input precontrol / n inp prectrl

SERVO (Pos ctrl), VECTOR (Pos ctrl), SERVO_AC (Pos ctrl), VECTOR_AC (Pos ctrl)

Can be changed: -	**Calculated:** -	**Access level:** 1
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 4015
P-Group: Closed loop position control	**Unit group:** 3_1	**Unit selection:** p0505
Not for motor type: -	**Scaling:** p2000	**Expert list:** 1
Min	**Max**	**Factory setting**
- [rpm]	- [rpm]	- [rpm]

Description: Displays the speed at the input of the precontrol channel.

Note: This display parameter is used for diagnostics even when the precontrol is inactive (p2534 = 0%).

p2567[0...n] LR force precontrol mass / F_prectrl mass

SERVO (Lin, Pos ctrl), SERVO_AC (Lin, Pos ctrl)

Can be changed: C2(25), U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 4015
P-Group: Closed loop position control	**Unit group:** 27_1	**Unit selection:** p0100
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.000000 [kg]	100000.000000 [kg]	1.000000 [kg]

Description: Sets the mass for the force precontrol.

Dependency: Refer to: p2534, r2564

Note: When calculating the force precontrol value (r2654), the derivation over time of the speed precontrol value is multiplied by p2567.

For reasons associated with the compatibility to earlier firmware releases, the factory setting for p2567 = 1 kg. This means that CO: r2564 remains, as standard, the derivation over time of the velocity precontrol value and refers, as before, to a weight of 1 kg. For force precontrol, the mass can now be directly entered into p2567 (instead of subsequently evaluating the precontrol value).

p2567[0...n] LR torque precontrol moment of inertia / M_prectr M_inertia

SERVO (Pos ctrl), VECTOR (Pos ctrl), SERVO_AC (Pos ctrl), VECTOR_AC (Pos ctrl)

Can be changed: C2(25), U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 4015
P-Group: Closed loop position control	**Unit group:** 25_1	**Unit selection:** p0100
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.000000 [kgm²]	100000.000000 [kgm²]	0.159155 [kgm²]

Description: Sets the moment of inertia for the torque precontrol.

Dependency: Refer to: p2534, r2564

Note: When calculating the torque precontrol value (r2654), the time derivation of the speed precontrol value is multiplied by 2 PI * p2567.

For reasons associated with the compatibility to earlier firmware versions, the factory setting for p2567 = 1 kgm^2/2 PI. This means that CO: r2564 remains as standard the derivation over time of the speed precontrol value and is referred, as before, to a moment of inertia of 1 kgm^2/2 PI. For torque precontrol, the moment of inertia can now be directly entered into p2567 (instead of subsequently evaluating the precontrol value).

p2568 BI: EPOS STOP cam activation / STOP cam act

SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)

Can be changed: C2(17), T	**Calculated:** -	**Access level:** 1
Data type: Unsigned32 / Binary	**Dyn. index:** -	**Func. diagram:** 3630
P-Group: Basic positioner	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0

Description: Sets the signal source to activate the function "STOP cam".

BI: p2568 = 1 signal

--> The evaluation of the STOP cam minus (BI: p2569) and STOP cam plus (BI: p2570) is active.

Dependency: Refer to: p2569, p2570

Note: The traversing range can also be limited using software limit switches.

p2569 BI: EPOS STOP cam minus / STOP cam minus

SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)

Can be changed: C2(17), T	**Calculated:** -	**Access level:** 1
Data type: Unsigned32 / Binary	**Dyn. index:** -	**Func. diagram:** 3630
P-Group: Basic positioner	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	1

Description: Sets the signal source for the STOP cam in the negative direction of travel.

Recommendation: Set the OFF3 ramp-down time (p1135) so that after the axis reaches the STOP cam at maximum velocity, the braking distance traveled by the axis is not greater than the distance that is available.

Sets message 07491 as alarm (A07491):

Set the maximum deceleration (p2573), so that the axis, after reaching the STOP cam at the maximum velocity, does not move through a higher braking travel than is actually available.

Dependency: Refer to: p1135, p2568, p2570, p2573, r2684

Refer to: F07491

Caution: The STOP cams are low active.

Sets message 07491 as fault (F07491):

For a 0 signal, the drive stops with the OFF3 ramp-down time (p1135), status signal r2684.13 = 1 is set, saved and the corresponding fault is output. After the fault has been acknowledged, only motion moving away from the STOP cam is permitted.

For a 0/1 signal and valid travel direction, when the STOP cam is exited, this is detected and the status signal r2684.13 is set to 0.

Sets message 07491 as alarm (A07491):

For a 0 signal, the axis is stopped with the maximum deceleration (p2573), status signal r2684.13 is set to 1, saved and the appropriate alarm is output. Only motion away from the STOP cam is permitted.

For a 0/1 signal and valid travel direction, when the STOP cam is exited, this is detected and the status signal r2684.13 is set to 0 and the alarm is deleted.

p2570 BI: EPOS STOP cam plus / STOP cam plus

SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)

Can be changed: C2(17), T	**Calculated:** -	**Access level:** 1
Data type: Unsigned32 / Binary	**Dyn. index:** -	**Func. diagram:** 3630
P-Group: Basic positioner	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	1

Description: Sets the signal source for the STOP cam in the positive direction of travel.

Recommendation: Set the OFF3 ramp-down time (p1135) so that after the axis reaches the STOP cam at maximum velocity, the braking distance traveled by the axis is not greater than the distance that is available.

Sets message 07492 as alarm (A07492):

Set the maximum deceleration (p2573), so that the axis, after reaching the STOP cam at the maximum velocity, does not move through a higher braking travel than is actually available.

Dependency: Refer to: p1135, p2568, p2569, p2573, r2684

Refer to: F07492

Caution: The STOP cams are low active.

Sets message 07492 as fault (F07492):

For a 0 signal, the drive stops with the OFF3 ramp-down time (p1135), status signal r2684.14 = 1 is set, saved and the corresponding fault is output. After the fault has been acknowledged, only motion moving away from the STOP cam is permitted.

For a 0/1 signal and valid travel direction, when the STOP cam is exited, this is detected and the status signal r2684.14 is set to 0.

Sets message 07492 as alarm (A07492):

For a 0 signal, the axis is stopped with the maximum deceleration (p2573), status signal r2684.14 is set to 1, saved and the appropriate alarm is output. Only motion away from the STOP cam is permitted.

For a 0/1 signal and valid travel direction, when the STOP cam is exited, this is detected and the status signal r2684.14 is set to 0 and the alarm is deleted.

p2571 EPOS maximum velocity / v_max

SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)

Can be changed: C2(17), U, T	**Calculated:** -	**Access level:** 1
Data type: Unsigned32	**Dyn. index:** -	**Func. diagram:** 3630
P-Group: Basic positioner	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
1 [1000 LU/min]	40000000 [1000 LU/min]	30000 [1000 LU/min]

Description: Sets the maximum velocity for the "basic positioner" function (EPOS).

Dependency: Refer to: r1084, r1087, p2503, p2504, p2505, p2506

Note: The maximum velocity is active in all of the operating modes of the basic positioner.

The maximum velocity for the basic positioner should be aligned with the maximum speed/velocity of the speed/velocity controller:

Rotary encoders:

p2571[1000 LU/min] = min(|r1084|, |r1087|)[rpm] x p2505/p2504 x p2506/1000

Linear encoders:

p2571[1000 LU/min] = min(|r1084|, |r1087|)[m/min] x p2503/10[m]

p2572 EPOS maximum acceleration / a_max

SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)

Can be changed: C2(17), T	**Calculated:** -	**Access level:** 1
Data type: Unsigned32	**Dyn. index:** -	**Func. diagram:** 3630
P-Group: Basic positioner	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
1 [1000 LU/s²]	2000000 [1000 LU/s²]	100 [1000 LU/s²]

Description: Sets the maximum acceleration for the "basic positioner" function (EPOS).

Dependency: Refer to: p2619, p2644

Note: The maximum acceleration appears to exhibit jumps (without jerk).

"Traversing blocks" operating mode:

The programmed acceleration override (p2619) acts on the maximum acceleration.

"Direct setpoint input/MDI" mode:

The acceleration override is effective (p2644, 4000 hex = 100 %).

"Jog" and "search for reference" modes

No acceleration override is active. The axis starts with the maximum acceleration.

p2573 EPOS maximum deceleration / -a_max

SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)

Can be changed: C2(17), T	**Calculated:** -	**Access level:** 1
Data type: Unsigned32	**Dyn. index:** -	**Func. diagram:** 3630
P-Group: Basic positioner	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
1 [1000 LU/s²]	2000000 [1000 LU/s²]	100 [1000 LU/s²]

Description: Sets the maximum deceleration for the "basic positioner" function (EPOS).

Dependency: Refer to: p2620, p2645

Note: The maximum deceleration appears to exhibit jumps (without jerk).

"Traversing blocks" operating mode:

The programmed deceleration override (p2620) acts on the maximum deceleration.

"Direct setpoint input/MDI" mode:

The deceleration override is effective (p2645, 4000 hex = 100 %).

"Jog" and "search for reference" modes

No deceleration override is effective. The axis breaks with the maximum deceleration.

p2574 EPOS jerk limiting / Jerk lim

SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)

Can be changed: C2(17), U, T	**Calculated:** -	**Access level:** 1
Data type: Unsigned32	**Dyn. index:** -	**Func. diagram:** 3635
P-Group: Basic positioner	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
1 [1000 LU/s³]	100000000 [1000 LU/s³]	10000 [1000 LU/s³]

Description: Sets the jerk limiting

Dependency: Refer to: p2572, p2573, p2575

Note: The jerk limiting is internally converted into a jerk time as follows:

Jerk time Tr = max(p2572, p2573) / p2574

The jerk time is internally limited to 1000 ms and is rounded-off to an integer multiple of the sampling time positioning (p0115[5]).

The jerk time is valid for the acceleration and deceleration phases also for unequal maximum acceleration (p2572) and maximum deceleration (p2573).

For unequal maximum acceleration and maximum deceleration, the motion is not optimal from a time perspective as the jerk limit cannot be used for the lower of the two values.

If, in the travel profile, the acceleration time without jerk limiting is shorter than jerk time Tr, then motion with jerk limiting is not time-optimized.

For traversing motion with a direct transition between acceleration and deceleration (i.e. jerk time is greater than the constant velocity phase), jerk can increase up to twice the parameterized jerk.

CONTINUE_FLYING with direction reversal acts internally just like a CONTINUE_WITH_STOP without the "position reached" being set. Without jerk limiting, this behavior can hardly be noticed as, when reversing, the position setpoint is only kept at zero for one interpolator clock cycle.

For block change enable CONTINUE_WITH_STOP, jerk limiting results in a longer delay time.

p2575 BI: EPOS jerk limiting activation / Jerk limit act

SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)

Can be changed: C2(17), T	**Calculated:** -	**Access level:** 1
Data type: Unsigned32 / Binary	**Dyn. index:** -	**Func. diagram:** 3635
P-Group: Basic positioner	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0

Description: Sets the signal source to activate the jerk limiting.

Activating/deactivating:

- using BI: p2575 = 1 signal or 0 signal.
- using the command JERK in the traversing block (only for BI: p2575 = 0 signal).

Dependency: Refer to: p2574

Note: A change of the signal state at the binector input is only accepted at zero speed.

p2576 EPOS modulo correction modulo range / Modulo corr range

SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)

Can be changed: C2(17), T	**Calculated:** -	**Access level:** 1
Data type: Unsigned32	**Dyn. index:** -	**Func. diagram:** 3635
P-Group: Basic positioner	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
1 [LU]	2147482647 [LU]	360000 [LU]

Description: Sets the modulo range for axes with modulo correction.

Dependency: Refer to: p2577

p2577 BI: EPOS modulo correction activation / Modulo corr act

SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)

Can be changed: C2(17), T	**Calculated:** -	**Access level:** 1
Data type: Unsigned32 / Binary	**Dyn. index:** -	**Func. diagram:** 3630, 3635
P-Group: Basic positioner	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0

Description: Sets the signal source to activate modulo correction.

Dependency: Refer to: p2576

Note: When the signal state changes at the binector input, this only becomes effective in the "ready for switching on" state.

Selecting modulo correction:

The actual position setpoint in the modulo range is corrected. The position actual value differs from the position setpoint by the following error and can also leave the modulo range.

De-selecting modulo correction:

It is based on the actual position actual value.

p2578 CI: EPOS software limit switch minus signal source / SW limSw Min S_src

SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)

Can be changed: C2(17), T	**Calculated:** -	**Access level:** 1
Data type: Unsigned32 / Integer32	**Dyn. index:** -	**Func. diagram:** 3630
P-Group: Basic positioner	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	2580[0]

Description: Sets the signal source for the software limit switch minus.

Dependency: Refer to: p2579, p2580, p2581, p2582

Refer to: A07469, A07477, A07479, F07481

Notice: A change to the software limit switch becomes immediately effective.

If the software limit switch is changed, then this results in the positions in the traversing blocks being checked.

Note: The following applies for the setting of the software limit switch:
Software limit switch minus < software limit switch plus

p2579 CI: EPOS software limit switch plus signal source / SW limSwPlus S_src

SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)

Can be changed: C2(17), T	**Calculated:** -	**Access level:** 1
Data type: Unsigned32 / Integer32	**Dyn. index:** -	**Func. diagram:** 3630
P-Group: Basic positioner	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	2581[0]

Description: Sets the signal source for the software limit switch plus.

Dependency: Refer to: p2578, p2580, p2581, p2582
Refer to: A07470, A07478, A07480, F07482

Notice: A change to the software limit switch becomes immediately effective.
If the software limit switch is changed, then this results in the positions in the traversing blocks being checked.

Note: The following applies for the setting of the software limit switch:
Software limit switch minus < software limit switch plus

p2580 CO: EPOS software limit switch minus / SW limSwitch minus

SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)

Can be changed: C2(17), U, T	**Calculated:** -	**Access level:** 1
Data type: Integer32	**Dyn. index:** -	**Func. diagram:** 3630
P-Group: Basic positioner	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-2147482648 [LU]	2147482647 [LU]	-2147482648 [LU]

Description: Sets the software limit switch, in the negative direction of travel.

Dependency: Refer to: p2578, p2579, p2581, p2582

p2581 CO: EPOS software limit switch plus / SW lim switch plus

SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)

Can be changed: C2(17), U, T	**Calculated:** -	**Access level:** 1
Data type: Integer32	**Dyn. index:** -	**Func. diagram:** 3630
P-Group: Basic positioner	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-2147482648 [LU]	2147482647 [LU]	2147482647 [LU]

Description: Sets the software limit switch, in the positive direction of travel.

Dependency: Refer to: p2578, p2579, p2580, p2582

p2582 BI: EPOS software limit switch activation / SW lim sw act

SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)

Can be changed: C2(17), T	**Calculated:** -	**Access level:** 1
Data type: Unsigned32 / Binary	**Dyn. index:** -	**Func. diagram:** 3630
P-Group: Basic positioner	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0

Description: Sets the signal source to activate the "software limit switch".

Dependency: Refer to: p2578, p2579, p2580, p2581

Caution: Software limit switch effective:
- axis is referenced (r2684.11 = 1) and BI: p2582 = 1 signal.

Software limit switch ineffective:
- modulo correction active (BI: p2577 = 1 signal).
- search for reference is executed.

Notice: Target position for relative positioning outside software limit switch:

The traversing block is started and the axis comes to a standstill at the software limit switch. An appropriate alarm is output and the traversing block is interrupted. Traversing blocks with valid position can be activated.

Target position for absolute positioning outside software limit switch:

In the "traversing blocks" mode, the traversing block is not started and an appropriate fault is output.

Axis outside the valid traversing range:

If the axis is already outside the valid traversing range, then an appropriate fault is output. The fault can be acknowledged at standstill. Traversing blocks with valid position can be activated.

Note: The traversing range can also be limited using STOP cams.

p2583 EPOS backlash compensation / Backlash comp

SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)

Can be changed: C2(17), U, T	**Calculated:** -	**Access level:** 1
Data type: Integer32	**Dyn. index:** -	**Func. diagram:** 3635
P-Group: Basic positioner	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-200000 [LU]	200000 [LU]	0 [LU]

Description: Sets the amount of play (backlash) for positive or negative play.

0: backlash compensation is deactivated.

> 0: Positive backlash (normal case)

When the direction is reversed, the encoder actual value leads the actual value.

< 0: Negative backlash

When the direction is reversed, the actual value leads the encoder actual value.

Dependency: If a stationary axis is referenced by setting the reference point, or an adjusted with absolute encoder is switched on, then the setting of p2604 is relevant for entering the compensation value.

p2604 = 1:

Traveling in the positive direction -> A compensation value is immediately entered.

Traveling in the negative direction -> A compensation value is not entered

p2604 = 0:

Traveling in the positive direction -> A compensation value is not entered

Traveling in the negative direction -> A compensation value is immediately entered.

When again setting the reference point (a referenced axis) or for "flying referencing", p2604 is not relevant but instead the history of the axis.

Refer to: p2604, r2667

p2584 EPOS functions configuration / EPOS fct. config

SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)

Can be changed: C2(17), T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Basic positioner	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0000 bin

Description: Sets the configuration for additional functions for the basic positioner (EPOS).

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Activate position feedback signal	Yes	No	-

Note: For bit 00:

When the bit is set, for traversing blocks with absolute target positions (p2617[x]) when the tolerance window (p2688) is reached, the traversing block number (p2616[x]) is output bit-coded (r2689).

p2585 EPOS jog 1 setpoint velocity / Jog 1 v_set

SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)

Can be changed: C2(17), U, T	**Calculated:** -	**Access level:** 1
Data type: Integer32	**Dyn. index:** -	**Func. diagram:** 3610
P-Group: Basic positioner	**Unit group:** -	**Unit selection:** -

Min	**Max**	**Factory setting**
-40000000 [1000 LU/min]	40000000 [1000 LU/min]	-300 [1000 LU/min]

Description: Sets the setpoint velocity for jog 1.

Dependency: Refer to: p2587, p2589, p2591

p2586 EPOS jog 2 setpoint velocity / Jog 2 v_set

SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)

Can be changed: C2(17), U, T	**Calculated:** -	**Access level:** 1
Data type: Integer32	**Dyn. index:** -	**Func. diagram:** 3610
P-Group: Basic positioner	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-40000000 [1000 LU/min]	40000000 [1000 LU/min]	300 [1000 LU/min]

Description: Sets the setpoint velocity for jog 2.

Dependency: Refer to: p2588, p2590, p2591

p2587 EPOS jog 1 traversing distance / Jog 1 distance

SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)

Can be changed: C2(17), U, T	**Calculated:** -	**Access level:** 1
Data type: Unsigned32	**Dyn. index:** -	**Func. diagram:** 3610
P-Group: Basic positioner	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0 [LU]	2147482647 [LU]	1000 [LU]

Description: Sets the traversing distance for incremental jog 1.

Dependency: Refer to: p2585, p2589, p2591

Note: Incremental jog 1 is started with BI: p2591 = 1 signal and BI: p2589 = 0/1 signal.
With BI: p2589 = 0 signal, incremental jog is interrupted.

p2588 EPOS jog 2 traversing distance / Jog 2 distance

SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)

Can be changed: C2(17), U, T	**Calculated:** -	**Access level:** 1
Data type: Unsigned32	**Dyn. index:** -	**Func. diagram:** 3610
P-Group: Basic positioner	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0 [LU]	2147482647 [LU]	1000 [LU]

Description: Sets the traversing distance for incremental jog 2.

Dependency: Refer to: p2586, p2590, p2591

Note: Incremental jog 2 is started with BI: p2591 = 1 signal and BI: p2590 = 0/1 signal.
With BI: p2590 = 0 signal, incremental jogging is interrupted.

p2589 BI: EPOS jog 1 signal source / Jog 1 S_src

SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)

Can be changed: C2(17), T	**Calculated:** -	**Access level:** 1
Data type: Unsigned32 / Binary	**Dyn. index:** -	**Func. diagram:** 3610, 3625
P-Group: Basic positioner	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0

Description: Sets the signal source for jog 1.

Dependency: When jogging, the axis is accelerated or braked with the maximum acceleration/deceleration (p2572/p2573).
BI: p2591 = 0 signal
The axis endlessly moves with the setpoint velocity, jog 1 (p2585).
BI: p2591 = 1 signal
The axis traverses through a parameterized distance (p2585) with the setpoint velocity, jog 1 (p2587).
Refer to: p2572, p2573, p2585, p2587, p2591

Notice: The parameter may be protected as a result of p0922 or p2079 and cannot be changed.

p2590 BI: EPOS jog 2 signal source / Jog 2 S_src

SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)

Can be changed: C2(17), T	**Calculated:** -	**Access level:** 1
Data type: Unsigned32 / Binary	**Dyn. index:** -	**Func. diagram:** 3610, 3625
P-Group: Basic positioner	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0

Description: Sets the signal source for jog 2.

Dependency: When jogging, the axis is accelerated or braked with the maximum acceleration/deceleration (p2572/p2573).
BI: p2591 = 0 signal
The axis endlessly moves with the setpoint velocity, jog 2 (p2586).
BI: p2591 = 1 signal
The axis traverses through a parameterized distance (p2586) with the setpoint velocity, jog 2 (p2588).
Refer to: p2572, p2573, p2586, p2588, p2591

Notice: The parameter may be protected as a result of p0922 or p2079 and cannot be changed.

p2591 BI: EPOS jogging incremental / Jog incr

SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)

Can be changed: C2(17), T	**Calculated:** -	**Access level:** 1
Data type: Unsigned32 / Binary	**Dyn. index:** -	**Func. diagram:** 3610
P-Group: Basic positioner	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0

Description: Sets the signal source for jogging incremental.

Dependency: Refer to: p2585, p2586, p2587, p2588, p2589, p2590

p2593 CI: EPOS LU/revolution LU/mm / LU/rev LU/mm

SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)

Can be changed: C2(17), T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32 / FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 3630
P-Group: Basic positioner	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	2524[0]

Description: Sets the signal source for the reference of the internal length units LU to motor revolution for rotary encoders and to mm for linear encoders.

Dependency: Refer to: p0404, r2524, p2594

Note: The signal value is used to convert the length unit to the speed or velocity setpoint.

p2594[0...2] CI: EPOS Maximum velocity externally limited / v_Max ext lim

SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)

Can be changed: C2(17), T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32 / FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 3630
P-Group: Basic positioner	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** p2000	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0

Description: Sets the signal source for the externally limited maximum velocity.

Index:
[0] = Setpoint limit absolute
[1] = Setpoint limiting positive
[2] = Setpoint limiting negative

Dependency: Refer to: r2524, p2571, p2593

Warning: In order that the externally limited velocity can be effective for the EPOS operating modes, connector input p2593 must be correctly interconnected.

p2595 BI: EPOS referencing start / Ref start

SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)

Can be changed: C2(17), T	**Calculated:** -	**Access level:** 1
Data type: Unsigned32 / Binary	**Dyn. index:** -	**Func. diagram:** 3612, 3625, 3614
P-Group: Basic positioner	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0

Description: Sets the signal source to start the "search for reference" or "flying referencing".

BI: p2595 = 0/1 signal

Referencing is started.

BI: p2595 = 1/0 signal

Referencing is interrupted.

Dependency: Refer to: p2597, p2598, p2599, r2684

Notice: The parameter may be protected as a result of p0922 or p2079 and cannot be changed.

Note: Search for reference (BI: p2597 = 0 signal):

The reference point approach can only be activated (0/1 edge) after traversing motion that is being processed has been completed.

With the start, where relevant, the state signal "reference point set" (r2684.11) is reset.

Flying referencing (BI: p2597 = 1 signal):

With the start, the state signal "reference point set" (r2684.11) is not reset.

p2596 BI: EPOS set reference point / Set ref_pt

SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)

Can be changed: C2(17), T	**Calculated:** -	**Access level:** 1
Data type: Unsigned32 / Binary	**Dyn. index:** -	**Func. diagram:** 3612
P-Group: Basic positioner	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0

Description: Sets the signal source for the "set reference point".

Dependency: Refer to: p2598, p2599, r2684

Notice: The parameter may be protected as a result of p0922 or p2079 and cannot be changed.

Note: Reference point setting is effective in the following operating states:
- in the basic state.
- for FIXED STOP with progress condition END (corresponds to the initial state).
- for traversing block interrupted via BI: p2640 = 0 signal (intermediate stop).
- for EPOS not enabled (BI: p2656 = 0 signal) and position actual value valid (BI: p2658 = 1 signal).

p2597 BI: EPOS referencing type selection / Ref_typ select

SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)

Can be changed: C2(17), T	**Calculated:** -	**Access level:** 1
Data type: Unsigned32 / Binary	**Dyn. index:** -	**Func. diagram:** 3612, 3614, 3625
P-Group: Basic positioner	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0

Description: Sets the signal source to select referencing type.
1 signal: Flying referencing
0 signal: Search for reference

Dependency: Refer to: p2595

Note: Referencing is activated as follows:
- Select the referencing type (BI: p2597)
- Start referencing (BI: p2595 = 0/1 signal)

p2598[0...3] CI: EPOS reference point coordinate signal source / Ref_pt coord S_src

SERVO (EPOS, Pos ctrl), VECTOR (EPOS, Pos ctrl), SERVO_AC (EPOS, Pos ctrl), VECTOR_AC (EPOS, Pos ctrl)

Can be changed: C2(25), T	**Calculated:** -	**Access level:** 1
Data type: Unsigned32 / Integer32	**Dyn. index:** -	**Func. diagram:** 3612, 3614

Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	[0] 2599[0] [1] 0 [2] 0 [3] 0

Description: Sets the signal source for the reference point coordinate.
This value is used as reference for the following referencing operations:
- search for reference
- set reference point
- flying referencing
- absolute value adjustment

Index:
[0] = Position control
[1] = Encoder 1
[2] = Encoder 2
[3] = Encoder 3

Dependency: Refer to: p2502, p2507, p2595, p2596, p2597, p2599

Note: When the function module "basic positioner" (r0108.4 = 1) is activated, the following applies:
Incremental measuring system:
After the reference point is reached, the drive accepts the actual axis position from the position received via the connector input p2598[0].
Absolute encoder:
When adjusting the encoder, the position received via the connector input is set as the actual axis position. The position offset to the actual encoder value is displayed in p2525.

Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0 [LU]	2147482647 [LU]	0 [LU]

Description: Sets the inner window for flying referencing.

Value = 0:

The evaluation of the inner window is deactivated.

Dependency: Refer to: p2597, p2602, r2684

Notice: The inner window must be set so that it is smaller than the outer window.

Note: If the difference between the reference point coordinate and detected actual position is less than the inner window, then no correction is executed for a referenced axis.

If the difference between the reference point coordinate and detected actual position is greater than the inner window and less than the outer window (p2602), then a correction is executed for a referenced axis.

p2602 EPOS flying referencing outer window / Outer window

SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)

P-Group: Basic positioner	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	1	1

Description: Sets the relative positioning mode for flying referencing.

Value = 1:

The corrected setpoint is not calculated into the traversing distance.

Value = 0:

The corrected setpoint is calculated into the traversing distance.

Dependency: Refer to: p2597, p2623, p2648

Notice: For p2603 = 0 the direction can change.

p2604 BI: EPOS search for reference start direction / Srch for ref dir

SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)

Can be changed: C2(17), T	**Calculated:** -	**Access level:** 1
Data type: Unsigned32 / Binary	**Dyn. index:** -	**Func. diagram:** 3612
P-Group: Basic positioner	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0

Description: Sets the signal sources for the start direction of the search for reference.

1 signal: Start in the negative direction.

0 signal: Start in the positive direction.

Dependency: Refer to: p2583, p2595, p2597

p2605 EPOS search for reference approach velocity reference cam / v_appr ref_cam

SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)

Can be changed: C2(17), U, T	**Calculated:** -	**Access level:** 1
Data type: Unsigned32	**Dyn. index:** -	**Func. diagram:** 3612
P-Group: Basic positioner	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
1 [1000 LU/min]	40000000 [1000 LU/min]	5000 [1000 LU/min]

Description: Sets the approach velocity to the reference cam for the search for reference.

Dependency: The search for reference only starts with the approach velocity to the reference cam when there is a reference cam (p2607 = 1).

Refer to: p2595, p2597, p2604, p2606, p2607

Note: When traversing to the reference cam, the velocity override is effective.

If, at the start of the search for reference, the axis is already at the reference cam, then the axis immediately starts to traverse to the zero mark.

p2606 EPOS search for reference reference cam maximum distance / Ref_cam max s

SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)			
	Can be changed: C2(17), U, T	**Calculated:** -	**Access level:** 1
	Data type: Unsigned32	**Dyn. index:** -	**Func. diagram:** 3612
	P-Group: Basic positioner	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0 [LU]	2147482647 [LU]	2147482647 [LU]

Description: Sets the maximum distance after the start of the search for reference when traversing to the reference cam.

Dependency: Refer to: p2595, p2597, p2604, p2605, p2607

Refer to: F07458

Note: When using a reversing cam, the maximum distance must be set appropriately long.

p2607 EPOS search for reference reference cam present / Ref_cam pres

SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)			
	Can be changed: C2(17), U, T	**Calculated:** -	**Access level:** 1
	Data type: Unsigned8	**Dyn. index:** -	**Func. diagram:** 3612
	P-Group: Basic positioner	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0	1	1

Description: Sets whether or not a reference cam is present for the search for reference.

Value = 1: Reference cam present.

Value = 0: No reference cam present.

Dependency: Refer to: p2595, p2597, p2604, p2605, p2606

p2608 EPOS search for reference approach velocity zero mark / v_appr ref_ZM

SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)			
	Can be changed: C2(17), U, T	**Calculated:** -	**Access level:** 1
	Data type: Unsigned32	**Dyn. index:** -	**Func. diagram:** 3612
	P-Group: Basic positioner	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	1 [1000 LU/min]	40000000 [1000 LU/min]	300 [1000 LU/min]

Description: Sets the approach velocity after detecting the reference cam to search for the zero mark for the search for reference.

Dependency: If there is no reference cam (p2607 = 0), the search for reference immediately starts with the axis traversing to the zero mark.

Refer to: p2595, p2597, p2604, p2607, p2609, p2610

Caution: If the reference cam is not adjusted so that at each search for reference the same zero mark for synchronization is detected, then an "incorrect" axis reference point is obtained.

After the reference cam has been left, the search for the zero mark is activated with a time delay due to internal factors. This is the reason that the reference cam should be adjusted in this center between two zero marks and the approach velocity should be adapted to the distance between two zero marks.

Note: The velocity override is not effective when traversing to the zero mark.

p2609 EPOS search for reference max distance ref cam and zero mark / Max s ref_cam ZM

SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)			
	Can be changed: C2(17), U, T	**Calculated:** -	**Access level:** 1
	Data type: Unsigned32	**Dyn. index:** -	**Func. diagram:** 3612
	P-Group: Basic positioner	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0 [LU]	2147482647 [LU]	20000 [LU]

Description: Sets the maximum distance after leaving the reference cam when traversing to the zero mark.

Dependency: Refer to: p2595, p2597, p2604, p2607, p2608, p2610

Refer to: F07459

p2610 EPOS search for ref. tol. bandwidth for distance to zero mark / Tol_band to ZM

SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)

Can be changed: C2(17), U, T	**Calculated:** -	**Access level:** 1
Data type: Unsigned32	**Dyn. index:** -	**Func. diagram:** 3612
P-Group: Basic positioner	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0 [LU]	2147482647 [LU]	2147482647 [LU]

Description: Sets the tolerance bandwidth for the distance to the zero mark

The zero mark is evaluated within the maximum distance between the reference cam and zero mark (p2609) minus the tolerance bandwidth for the distance to the zero mark (p2610).

Dependency: Refer to: p2609

p2611 EPOS search for reference approach velocity reference point / v_appr ref_pt

SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)

Can be changed: C2(17), U, T	**Calculated:** -	**Access level:** 1
Data type: Unsigned32	**Dyn. index:** -	**Func. diagram:** 3612
P-Group: Basic positioner	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
1 [1000 LU/min]	40000000 [1000 LU/min]	300 [1000 LU/min]

Description: Sets the approach velocity after detecting the zero mark to approach the reference point.

Dependency: Refer to: p2595, p2597, p2604, p2607, p2609, p2610

Note: When traversing to the reference point, the velocity override is not effective.

p2612 BI: EPOS search for reference reference cam / Ref_cam

SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)

Can be changed: C2(17), T	**Calculated:** -	**Access level:** 1
Data type: Unsigned32 / Binary	**Dyn. index:** -	**Func. diagram:** 3612
P-Group: Basic positioner	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0

Description: Sets the signal source for the reference cam.

Dependency: Refer to: p2607

Notice: The parameter may be protected as a result of p0922 or p2079 and cannot be changed.

p2613 BI: EPOS search for reference reversing cam minus / Rev minus

SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)

Can be changed: C2(17), T	**Calculated:** -	**Access level:** 1
Data type: Unsigned32 / Binary	**Dyn. index:** -	**Func. diagram:** 3612
P-Group: Basic positioner	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	1

Description: Sets the signal source for the reversing cam in the negative direction of travel.

1 signal: Reversing cam not reached.

0 signal: Reversing cam reached.

Dependency: Refer to: p2614

Note: If, during the search for reference from the reversing cam minus and plus, a 0 signal is detected, then the axis remains stationary (at standstill).

p2614 BI: EPOS search for reference reversing cam plus / Rev plus

SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)

Can be changed: C2(17), T	**Calculated:** -	**Access level:** 1
Data type: Unsigned32 / Binary	**Dyn. index:** -	**Func. diagram:** 3612
P-Group: Basic positioner	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	1

Description: Sets the signal source for the reversing cam in the negative direction of travel.

1 signal: Reversing cam not reached.

0 signal: Reversing cam reached.

Dependency: Refer to: p2613

Note: If, during the search for reference from the reversing cam minus and plus, a 0 signal is detected, then the axis remains stationary (at standstill).

p2615 EPOS maximum number of traversing blocks / Trav_block qty max

SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)

Can be changed: C2(17)	**Calculated:** -	**Access level:** 1
Data type: Unsigned8	**Dyn. index:** -	**Func. diagram:** 3616
P-Group: Basic positioner	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
1	64	64

Description: Sets the maximum number of traversing blocks that are available.

Dependency: Refer to: p2616, p2617, p2618, p2619, p2620, p2621, p2622, p2623, p2624

p2616[0...n] EPOS traversing block block number / Trav_blk, blkNo.

SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)

Can be changed: C2(17), U, T	**Calculated:** -	**Access level:** 1
Data type: Integer16	**Dyn. index:** p2615	**Func. diagram:** 3616
P-Group: Basic positioner	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-1	63	-1

Description: Sets a block number.

-1: Invalid block number. These blocks are not taken into account.

0 ... 63: valid block number.

Dependency: The number of indices depends on p2615.

Refer to: p2615, p2617, p2618, p2619, p2620, p2621, p2622, p2623, p2624

p2617[0...n] EPOS traversing block position / Trav_block pos

SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)

Can be changed: C2(17), U, T	**Calculated:** -	**Access level:** 1
Data type: Integer32	**Dyn. index:** p2615	**Func. diagram:** 3616
P-Group: Basic positioner	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-2147482648 [LU]	2147482647 [LU]	0 [LU]

Description: Sets the target position for the traversing block.

Dependency: The number of indices depends on p2615.

Refer to: p2615, p2616, p2618, p2619, p2620, p2621, p2622, p2623, p2624

Note: The target position is approached in either relative or absolute terms depending on p2623.

p2618[0...n] EPOS traversing block velocity / Trav_block v

SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)

Can be changed: C2(17), U, T	**Calculated:** -	**Access level:** 1
Data type: Integer32	**Dyn. index:** p2615	**Func. diagram:** 3616
P-Group: Basic positioner	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
1 [1000 LU/min]	40000000 [1000 LU/min]	600 [1000 LU/min]

Description: Sets the velocity for the traversing block.

Dependency: The number of indices depends on p2615.

Refer to: p2615, p2616, p2617, p2619, p2620, p2621, p2622, p2623, p2624, p2646

Note: The velocity can be influenced using the velocity override (p2646).

p2619[0...n] EPOS traversing block acceleration override / Trav_block a_over

SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)

Can be changed: C2(17), U, T	**Calculated:** -	**Access level:** 1
Data type: FloatingPoint32	**Dyn. index:** p2615	**Func. diagram:** 3616
P-Group: Basic positioner	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
1.0 [%]	100.0 [%]	100.0 [%]

Description: Sets the acceleration override for the traversing block.

The override refers to the maximum acceleration (p2572).

Dependency: The number of indices depends on p2615.

Refer to: p2572, p2615, p2616, p2617, p2618, p2620, p2621, p2622, p2623, p2624

p2620[0...n] EPOS traversing deceleration override / Trav_block -a_over

SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)

Can be changed: C2(17), U, T	**Calculated:** -	**Access level:** 1
Data type: FloatingPoint32	**Dyn. index:** p2615	**Func. diagram:** 3616
P-Group: Basic positioner	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
1.0 [%]	100.0 [%]	100.0 [%]

Description: Sets the deceleration override for the traversing block.

The override refers to the maximum deceleration (p2573).

Dependency: The number of indices depends on p2615.

Refer to: p2573, p2615, p2616, p2617, p2618, p2619, p2621, p2622, p2623, p2624

Notice: If, when calculating the traversing profile, it is identified that the target position of the next block with the programmed deceleration override will not be reached without direction reversal (flying block change), then the old (actual) deceleration override remains effective.

p2621[0...n] EPOS traversing block task / Trav_block task

SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)

Can be changed: C2(17), U, T	**Calculated:** -	**Access level:** 1
Data type: Integer16	**Dyn. index:** p2615	**Func. diagram:** 3616
P-Group: Basic positioner	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
1	9	1

Description: Sets the required task for the traversing block.

Value:
1: POSITIONING
2: FIXED STOP
3: ENDLESS_POS
4: ENDLESS_NEG
5: WAITING
6: GOTO
7: SET_O
8: RESET_O
9: JERK

Dependency: The number of indices depends on p2615.

Refer to: p2615, p2616, p2617, p2618, p2619, p2620, p2622, p2623, p2624

p2622[0...n] EPOS traversing block task parameter / Trav_blck task_par

SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)

Can be changed: C2(17), U, T	**Calculated:** -	**Access level:** 1
Data type: Integer32	**Dyn. index:** p2615	**Func. diagram:** 3616
P-Group: Basic positioner	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-2147483648	2147483647	0

Description: Sets additional information/data of the appropriate task for the traversing block.

Dependency: The number of indices depends on p2615.

Refer to: p2615, p2616, p2617, p2618, p2619, p2620, p2621, p2623, p2624

Note: The following should be set depending on the task:

FIXED STOP: Clamping torque and clamping force (rotary 0...65536 [0.01 Nm], linear 0...65536 [N])

WAIT: Delay time [ms]

GOTO: Block number

SET_O: 1, 2 or 3 - set direct output 1, 2 or 3 (both)

RESET_O: 1, 2 or 3 - reset direct output 1, 2 or 3 (both)

JERK: 0 - deactivate, 1 - activate

p2623[0...n] EPOS traversing block task mode / Trav_block mode

SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)

Can be changed: C2(17), U, T	**Calculated:** -	**Access level:** 1
Data type: Unsigned16	**Dyn. index:** p2615	**Func. diagram:** 3515, 3616
P-Group: Basic positioner	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	65535	0

Description: Sets the influence of the task for the traversing block.

Value = 0000 cccc bbbb aaaa

cccc: Positioning mode

cccc = 0000 --> ABSOLUTE

cccc = 0001 --> RELATIVE

cccc = 0010 --> ABS_POS (only for a rotary axis with modulo correction)

cccc = 0011 --> ABS_NEG (only for a rotary axis with modulo correction)

bbbb: Progression condition

bbbb = 0000 --> END

bbbb = 0001 --> CONTINUE WITH STOP

bbbb = 0010 --> CONTINUE FLYING

bbbb = 0011 --> CONTINUE EXTERNAL

bbbb = 0100 --> CONTINUE EXTERNAL WAIT

bbbb = 0101 --> CONTINUE EXTERNAL ALARM

aaaa: IDs

aaaa = 000x --> show/hide block (x = 0: show, x = 1: hide)

Dependency: The number of indices depends on p2615.

Refer to: p2615, p2616, p2617, p2618, p2619, p2620, p2621, p2622, p2624

p2624 EPOS traversing block sorting / Trav_block sort

SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)

Can be changed: C2(17), U, T	**Calculated:** -	**Access level:** 1
Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** 3616
P-Group: Basic positioner	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	1	0

Description: Sets the traversing blocks for sorting corresponding to their block number.

Procedure: Set p2624 = 0 --> 1.

Sorting is started and the parameters are automatically reset to zero once the operation has been completed.

Dependency: Refer to: p2615, p2616, p2617, p2618, p2619, p2620, p2621, p2622, p2623

Note: After sorting, the traversing blocks are written at the beginning of the memory in increasing sequence without any gaps.

p2625 BI: EPOS traversing block selection bit 0 / Trav_blk sel bit 0

SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)

Can be changed: C2(17), T	**Calculated:** -	**Access level:** 1
Data type: Unsigned32 / Binary	**Dyn. index:** -	**Func. diagram:** 3616, 3640
P-Group: Basic positioner	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0

Description: Sets the signal source to select the traversing block, bit 0.

Dependency: Binector inputs p2625, p2626, p2627, p2628, p2629 and p2630 are used to select one of the maximum of 64 traversing blocks.

Refer to: p2626, p2627, p2628, p2629, p2630

p2626 BI: EPOS traversing block selection bit 1 / Trav_blk sel bit 1

SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)

Can be changed: C2(17), T	**Calculated:** -	**Access level:** 1
Data type: Unsigned32 / Binary	**Dyn. index:** -	**Func. diagram:** 3616, 3640
P-Group: Basic positioner	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0

Description: Sets the signal source to select the traversing block, bit 1.

Dependency: Binector inputs p2625, p2626, p2627, p2628, p2629 and p2630 are used to select one of the maximum of 64 traversing blocks.

Refer to: p2625, p2627, p2628, p2629, p2630

p2627 BI: EPOS traversing block selection bit 2 / Trav_blk sel bit 2

SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)

Can be changed: C2(17), T	**Calculated:** -	**Access level:** 1
Data type: Unsigned32 / Binary	**Dyn. index:** -	**Func. diagram:** 3616, 3640
P-Group: Basic positioner	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0

Description: Sets the signal source to select the traversing block, bit 2.

Dependency: Binector inputs p2625, p2626, p2627, p2628, p2629 and p2630 are used to select one of the maximum of 64 traversing blocks.

Refer to: p2625, p2626, p2628, p2629, p2630

p2628 BI: EPOS traversing block selection bit 3 / Trav_blk sel bit 3

SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)

Can be changed: C2(17), T	**Calculated:** -	**Access level:** 1
Data type: Unsigned32 / Binary	**Dyn. index:** -	**Func. diagram:** 3616, 3640
P-Group: Basic positioner	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0

Description: Sets the signal source to select the traversing block, bit 3.

Dependency: Binector inputs p2625, p2626, p2627, p2628, p2629 and p2630 are used to select one of the maximum of 64 traversing blocks.

Refer to: p2625, p2626, p2627, p2629, p2630

p2629 BI: EPOS traversing block selection bit 4 / Trav_blk sel bit 4

SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)

Can be changed: C2(17), T	**Calculated:** -	**Access level:** 1
Data type: Unsigned32 / Binary	**Dyn. index:** -	**Func. diagram:** 3616, 3640
P-Group: Basic positioner	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0

Description: Sets the signal source to select the traversing block, bit 4.

Dependency: Binector inputs p2625, p2626, p2627, p2628, p2629 and p2630 are used to select one of the maximum of 64 traversing blocks.

Refer to: p2625, p2626, p2627, p2628, p2630

p2630 BI: EPOS traversing block selection bit 5 / Trav_blk sel bit 5

SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)

Can be changed: C2(17), T	**Calculated:** -	**Access level:** 1
Data type: Unsigned32 / Binary	**Dyn. index:** -	**Func. diagram:** 3616, 3640
P-Group: Basic positioner	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0

Description: Sets the signal source to select the traversing block, bit 5.

Dependency: Binector inputs p2625, p2626, p2627, p2628, p2629 and p2630 are used to select one of the maximum of 64 traversing blocks.

Refer to: p2625, p2626, p2627, p2628, p2629

p2631 BI: EPOS activate traversing task (0 -> 1) / Trav_task act

SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)

Can be changed: C2(17), T	**Calculated:** -	**Access level:** 1
Data type: Unsigned32 / Binary	**Dyn. index:** -	**Func. diagram:** 3616, 3625
P-Group: Basic positioner	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0

Description: Sets the signal source for "activating traversing task".

BI: p2631 = 0/1 signal

The traversing task, selected using BI: p2625 ... p2630, is started.

Dependency: Refer to: p2625, p2626, p2627, p2628, p2629, p2630, p2640, p2641

Notice: The parameter may be protected as a result of p0922 or p2079 and cannot be changed.

Note: To start a traversing block, the axis must be referenced (r2684.11 = 1).

The status signal r2684.12 = 0/1 signal is used for acknowledgment.

A traversing task can be influenced using the following signals:

- intermediate stop via BI: p2640.
- reject traversing task via BI: p2641.

p2632 EPOS external block change evaluation / Ext BlckChg eval

SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)

Can be changed: C2(17), T	**Calculated:** -	**Access level:** 1
Data type: Integer16	**Dyn. index:** -	**Func. diagram:** 3615, 3616
P-Group: Basic positioner	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	1	0

Description: Sets the mode to evaluate "external block change".

Value:
0: External block change via the measuring probe
1: External block change via BI: p2633

Dependency: Refer to: p2623, p2633, r2677, r2678

Note: In the mode "external block change via measuring probe" (p2632 = 0), the following applies:

When starting a traversing block with the block change enable CONTINUE_EXTERNAL, CONTINUE_EXTERNAL_WAIT and CONTINUE_EXTERNAL_ALARM an activated "flying referencing" is interrupted. After ending the block, "flying referencing" must be re-activated via BI: p2595 = 0/1 signal.

p2633 BI: EPOS external block change (0 -> 1) / Ext BlckChg (0->1)

SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)

Can be changed: C2(17), T	**Calculated:** -	**Access level:** 1
Data type: Unsigned32 / Binary	**Dyn. index:** -	**Func. diagram:** 3615
P-Group: Basic positioner	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0

Description: Sets the signal source for "external block change".

BI: p2633 = 0/1 signal

Dependency: The evaluation of the signal is only active p2632 = 1.

Refer to: p2623, p2632, p2640, p2641, r2677, r2678

Notice: The parameter may be protected as a result of p0922 or p2079 and cannot be changed.

Note: A 0/1 edge initiates a flying block change in the subsequent traversing block.

When the external block change is identified, the actual position is saved in r2678.

A traversing task can be influenced using the following signals:

- intermediate stop via BI: p2640.
- reject traversing task via BI: p2641.

p2634[0...n] EPOS fixed stop maximum following error / Following err max

SERVO (Pos ctrl), VECTOR (Pos ctrl), SERVO_AC (Pos ctrl), VECTOR_AC (Pos ctrl)

Can be changed: C2(25), U, T	**Calculated:** -	**Access level:** 1
Data type: Unsigned32	**Dyn. index:** DDS, p0180	**Func. diagram:** 3617, 4025
P-Group: Closed loop position control	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0 [LU]	2147482647 [LU]	1000 [LU]

Description: Sets the following error to detect the "fixed stop reached" state (r2526.4).

Dependency: Refer to: r2526, p2621, r2675

Note: The state "fixed stop reached" is detected if the following error exceeds the theoretically calculated following error value by p2634.

p2635 EPOS fixed stop monitoring window / Fixed stop monit

SERVO (Pos ctrl), VECTOR (Pos ctrl), SERVO_AC (Pos ctrl), VECTOR_AC (Pos ctrl)

Can be changed: C2(25), U, T	**Calculated:** -	**Access level:** 1
Data type: Unsigned32	**Dyn. index:** -	**Func. diagram:** 3617, 4025
P-Group: Closed loop position control	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0 [LU]	2147482647 [LU]	100 [LU]

Description: Sets the monitoring window of the actual position after the fixed stop is reached.

Dependency: Refer to: r2526, r2683

Refer to: F07484

Note: If, after the fixed stop is reached, the end stop shifts in either the positive or negative direction by more than the value set here, then BO: r2526.5 is set to 1 and an appropriate message is output.

p2637 BI: EPOS fixed stop reached / Fixed stop reached

SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)

Can be changed: C2(17), T	**Calculated:** -	**Access level:** 1
Data type: Unsigned32 / Binary	**Dyn. index:** -	**Func. diagram:** 3616, 3617
P-Group: Basic positioner	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	2526.4

Description: Sets the signal source for the feedback signal "fixed stop reached".

BI: p2637 = 1 signal

Fixed stop is reached.

BI: p2637 = 0 signal

Fixed stop is not reached.

Dependency: Refer to: r2526, p2634

Notice: The parameter may be protected as a result of p0922 or p2079 and cannot be changed.

Note: The identification of "fixed stop reached" is, for the factory setting, dependent on the signal BO: r2526.4 (fixed stop reached). This signal is influenced via p2634 (EPOS fixed stop, maximum following error).

p2638 BI: EPOS fixed stop outside the monitoring window / Fixed stop outside

SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)

Can be changed: C2(17), T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32 / Binary	**Dyn. index:** -	**Func. diagram:** 3616, 3617
P-Group: Basic positioner	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	2526.5

Description: Sets the signal source for the feedback signal "fixed stop outside the monitoring window".

BI: p2638 = 1 signal

Fixed stop is located outside the monitoring window.

BI: p2638 = 0 signal

Fixed stop is inside the monitoring window.

Dependency: Refer to: r2526, p2635

Note: The identification of "fixed stop outside the monitoring window" is, for the factory setting, dependent on signal BO: r2526.5 (fixed stop outside window). This signal is influenced via p2635 (EPOS fixed stop monitoring window).

p2639 BI: EPOS force limit reached / F_limit reached

SERVO (EPOS, Lin), SERVO_AC (EPOS, Lin)

Can be changed: C2(17), T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32 / Binary	**Dyn. index:** -	**Func. diagram:** 3616
P-Group: Basic positioner	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	1407.7

Description: Sets the signal source for the feedback signal "force limit reached" when traversing to fixed stop.

BI: p2639 = 1 signal

Force limit has been reached.

BI: p2639 = 0 signal

Force limit has not been reached.

Dependency: Refer to: r1407

Note: The feedback signal from "force limit reached" is, for the factory setting, dependent on the signal BO: r1407.7 (torque limit reached).

p2639 BI: EPOS torque limit reached / M_limit reached

SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)

Can be changed: C2(17), T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32 / Binary	**Dyn. index:** -	**Func. diagram:** 3616
P-Group: Basic positioner	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	1407.7

Description: Sets the signal source for the feedback signal "torque limit reached" when traversing to fixed stop.

BI: p2639 = 1 signal

Torque limit is reached.

BI: p2639 = 0 signal

Torque limit is not reached.

Dependency: Refer to: r1407

Note: The feedback signal from "torque limit reached" is, for the factory setting, dependent on the signal BO: r1407.7 (torque limit reached).

p2640 BI: EPOS intermediate stop (0 signal) / Intermediate stop

SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)

Can be changed: C2(17), T	**Calculated:** -	**Access level:** 1
Data type: Unsigned32 / Binary	**Dyn. index:** -	**Func. diagram:** 3616, 3620, 3625
P-Group: Basic positioner	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0

Description: Sets the signal source for the "no intermediate stop/intermediate stop".

BI: p2640 = 1 signal

No intermediate stop.

BI: p2640 = 0 signal

Intermediate stop.

Dependency: Refer to: p2631, p2641, p2647, p2649

Caution: For BI: p2649 = 1 signal, the following applies:

Motion starts without any explicit control signal.

Notice: The parameter may be protected as a result of p0922 or p2079 and cannot be changed.

Note: This signal is only effective in the modes "traversing blocks" and "direct setpoint input/MDI".

When activating the intermediate stop, the axis brakes with the parameterized deceleration (p2620 or p2645).

p2641 BI: EPOS reject traversing task (0 signal) / Trav_task reject

SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)

Can be changed: C2(17), T	**Calculated:** -	**Access level:** 1
Data type: Unsigned32 / Binary	**Dyn. index:** -	**Func. diagram:** 3616, 3620, 3625
P-Group: Basic positioner	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0

Description: Sets the signal source for "do not reject traversing task/reject traversing task".
BI: p2641 = 1 signal
Do not reject traversing task.
BI: p2641 = 0 signal
Reject traversing task.

Dependency: Refer to: p2631, p2640, p2647, p2649

Caution: For BI: p2649 = 1 signal, the following applies:
Motion starts without any explicit control signal.

Notice: The parameter may be protected as a result of p0922 or p2079 and cannot be changed.

Note: This signal is only effective in the modes "traversing blocks" and "direct setpoint input/MDI".
When activating reject traversing tasks, then the axis brakes with the maximum deceleration (p2573).

p2642 CI: EPOS direct setpoint input/MDI position setpoint / MDI s_set

SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)

Can be changed: C2(17), T	**Calculated:** -	**Access level:** 1
Data type: Unsigned32 / Integer32	**Dyn. index:** -	**Func. diagram:** 3618
P-Group: Basic positioner	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	2690[0]

Description: Sets the signal source for the position setpoint in the mode "direct setpoint input/MDI".

Dependency: Refer to: p2648, p2649, p2650, p2690

Notice: The parameter may be protected as a result of p0922 or p2079 and cannot be changed.

Note: Depending on p2649, the position setpoint is either transferred continuously or edge-triggered.
The position setpoint input is interpreted as length unit [LU].

p2643 CI: EPOS direct setpoint input/MDI velocity setpoint / MDI v_set

SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)

Can be changed: C2(17), T	**Calculated:** -	**Access level:** 1
Data type: Unsigned32 / Integer32	**Dyn. index:** -	**Func. diagram:** 3618
P-Group: Basic positioner	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	2691[0]

Description: Sets the signal source for the velocity setpoint in the "direct setpoint input/MDI mode".

Dependency: Refer to: p2649, p2650, p2691

Notice: The parameter may be protected as a result of p0922 or p2079 and cannot be changed.

Note: Depending on p2649, the velocity setpoint is either transferred continuously or edge-triggered.
The velocity setpoint input is interpreted as [1000 LU/min].

p2644 CI: EPOS direct setpoint input/MDI acceleration override / MDI a_over

SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)

Can be changed: C2(17), T	**Calculated:** -	**Access level:** 1
Data type: Unsigned32 / FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 3618
P-Group: Basic positioner	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** PERCENT	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	2692[0]

Description: Sets the signal source for the acceleration override in the operating mode "direct setpoint input/MDI".

Dependency: Refer to: p2649, p2650, p2692

Notice: The parameter may be protected as a result of p0922 or p2079 and cannot be changed.

Note: Depending on p2649, the acceleration override is either transferred continuously or edge-triggered.

The signal value 4000 hex (16384 dec) corresponds to 100 %.

p2645 CI: EPOS direct setpoint input/MDI deceleration override / MDI -a_over

SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)

Can be changed: C2(17), T	**Calculated:** -	**Access level:** 1
Data type: Unsigned32 / FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 3618
P-Group: Basic positioner	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** PERCENT	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	2693[0]

Description: Sets the signal source for the deceleration override in the operating mode "direct setpoint input/MDI".

Dependency: Refer to: p2649, p2650, p2693

Notice: If, when calculating the traversing profile, it is identified that the target position with the programmed deceleration override cannot be reached without reversing the direction, then when accepting the dynamic values, the larger deceleration override is accepted and becomes effective.

The parameter may be protected as a result of p0922 or p2079 and cannot be changed.

Note: Depending on p2649, the deceleration override is either transferred continuously or edge-triggered.

The signal value 4000 hex (16384 dec) corresponds to 100 %.

p2646 CI: EPOS velocity override / v_over

SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)

Can be changed: C2(17), T	**Calculated:** -	**Access level:** 1
Data type: Unsigned32 / FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 3630
P-Group: Basic positioner	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** PERCENT	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	1

Description: Sets the signal source for the velocity override.

This velocity override is effective in the following operating modes "direct setpoint input/MDI", "traversing blocks", "jogging" and "search for reference" (when approaching the reference cam).

Dependency: Refer to: p2571, p2585, p2586, p2605, p2618, p2643, r2681

Notice: The parameter may be protected as a result of p0922 or p2079 and cannot be changed.

Note: The effective override (r2681) can differ from the specified override due to limits (e.g. maximum velocity).

p2647 BI: EPOS direct setpoint input/MDI selection / MDI selection

SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)

Can be changed: C2(17), T	**Calculated:** -	**Access level:** 1
Data type: Unsigned32 / Binary	**Dyn. index:** -	**Func. diagram:** 3620, 3625, 3640
P-Group: Basic positioner	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0

Description: Sets the signal source for selecting the operating mode "direct setpoint input/MDI".

Dependency: Refer to: p2640, p2641, p2642, p2643, p2644, p2645, p2646, p2648, p2649, p2650, p2651, p2652, p2653

Note: In this mode, using BI: p2653 it is possible to make a flying changeover between setting-up and positioning.
In this mode, even if the axis is not referenced (r2684.11 = 0) relative positioning is possible.

p2648 BI: EPOS direct setpoint input/MDI positioning type / MDI pos_type

SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)

Can be changed: C2(17), T	**Calculated:** -	**Access level:** 1
Data type: Unsigned32 / Binary	**Dyn. index:** -	**Func. diagram:** 3620
P-Group: Basic positioner	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0

Description: Sets the signal source for the positioning type in the mode "direct setpoint input/MDI".
BI: p2648 = 1 signal
Absolute positioning is selected.
BI: p2648 = 0 signal
Relative positioning is selected.

Dependency: Refer to: p2649, p2650, p2654
Refer to: A07461, F07488

Notice: Absolute positioning:
To traverse, the reference point must be set (r2684.11 = 1).
Relative positioning:
To traverse, it is not necessary that the reference point is set.

Note: Depending on p2649, the positioning type is either transferred continuously or edge-triggered.
Binector input p2648 is only evaluated when connector input p2654 = 0. If p2654 is a value other than 0, the positioning type is evaluated by means of the set signal source.

p2649 BI: EPOS direct setpoint input/MDI transfer type selection / MDI trans_type sel

SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)

Can be changed: C2(17), T	**Calculated:** -	**Access level:** 1
Data type: Unsigned32 / Binary	**Dyn. index:** -	**Func. diagram:** 3620
P-Group: Basic positioner	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0

Description: Sets the signal source to define how values are transferred in the operating mode "direct setpoint input/MDI".
BI: p2649 = 1 signal
Values are continually transferred (refer to parameter under dependency).
BI: p2649 = 0 signal
The values are transferred for BI: p2650 = 0/1 signal.

Dependency: Refer to: p2642, p2643, p2644, p2645, p2648, p2650, p2651, p2652

Caution: For BI: p2649 = 1 signal, the following applies:
Motion starts without any explicit control signal.

Note: Parameter p2649 can only be changed when p0922 (p2079) = 999.

p2650 BI: EPOS direct setpoint input/MDI setpoint acceptance edge / MDI setp_accept

SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)

Can be changed: C2(17), T	**Calculated:** -	**Access level:** 1
Data type: Unsigned32 / Binary	**Dyn. index:** -	**Func. diagram:** 3620
P-Group: Basic positioner	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0

Description: Sets the signal source to accept the values for edge-triggered selection (BI: p2649 = 0 signal) in the operating mode "direct setpoint input/MDI".
BI: p2650 = 0/1 signal and BI: p2649 = 0 signal
Values are accepted, edge-triggered (refer to parameter under dependency).

Dependency: Refer to: p2640, p2641, p2642, p2643, p2644, p2645, p2648, p2649, p2651, p2652, r2684

Notice: The parameter may be protected as a result of p0922 or p2079 and cannot be changed.

Note: The status signal r2684.12 = 0/1 signal is used for acknowledgment.

The operating mode "direct setpoint input/MDI" can be influenced via the following signals:

- intermediate stop via BI: p2640.
- reject traversing task via BI: p2641.

p2651 BI: EPOS direct setpoint input/MDI direction selection, positive / MDI dir_sel pos

SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)

Can be changed: C2(17), T	**Calculated:** -	**Access level:** 1
Data type: Unsigned32 / Binary	**Dyn. index:** -	**Func. diagram:** 3620
P-Group: Basic positioner	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0

Description: Sets the signal source for the positive direction selection in the operating mode "direct setpoint input/MDI".

Dependency: Refer to: p2576, p2648, p2649, p2650, p2652, p2653, p2654

Note: The following applies for "setting-up":

- the traversing direction can be entered using this binector input.
- if both directions (p2651, p2652) are selected, then the axis remains stationary (zero speed).
- if both directions (p2651, p2652) are de-selected, then the axis remains stationary (zero speed).

The following applies for "positioning":

Using binector inputs p2651 and p2652, when the modulo correction (BI: p2577 = 1 signal) is activated and for absolute positioning (BI: p2648 = 1 signal), the traversing direction is specified as follows:

BI: p2651 / BI: p2652

0 signal / 0 signal: Absolute positioning through the shortest distance.

1 signal / 0 signal: Absolute positioning in the positive direction.

0 signal / 1 signal: Absolute positioning in the negative direction.

1 signal / 1 signal: Absolute positioning through the shortest distance.

p2652 BI: EPOS direct setpoint input/MDI direction selection negative / MDI dir_sel neg

SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)

Can be changed: C2(17), T	**Calculated:** -	**Access level:** 1
Data type: Unsigned32 / Binary	**Dyn. index:** -	**Func. diagram:** 3620
P-Group: Basic positioner	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0

Description: Sets the signal source for the negative direction selection in the operating mode "direct setpoint input/MDI".

Dependency: Refer to: p2576, p2648, p2649, p2650, p2651, p2653, p2654

Note: The following applies for "setting-up":

- the traversing direction can be entered using this binector input.
- if both directions (p2651, p2652) are selected, then the axis remains stationary (zero speed).
- if both directions (p2651, p2652) are de-selected, then the axis remains stationary (zero speed).

The following applies for "positioning":

Using binector inputs p2651 and p2652, when the modulo correction (BI: p2577 = 1 signal) is activated and for absolute positioning (BI: p2648 = 1 signal), the traversing direction is specified as follows:

BI: p2651 / BI: p2652

0 signal / 0 signal: Absolute positioning through the shortest distance.

1 signal / 0 signal: Absolute positioning in the positive direction.

0 signal / 1 signal: Absolute positioning in the negative direction.

1 signal / 1 signal: Absolute positioning through the shortest distance.

p2653 BI: EPOS direct setpoint input/MDI setting-up selection / MDI setting-up sel

SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)	**Can be changed:** C2(17), T	**Calculated:** -	**Access level:** 1
	Data type: Unsigned32 / Binary	**Dyn. index:** -	**Func. diagram:** 3620
	P-Group: Basic positioner	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	-	-	0

Description: Sets the signal source for setting-up in the operating mode "direct setpoint input/MDI".

BI: p2653 = 1 signal

Setting-up selected.

BI: p2653 = 0 signal

Positioning selected.

Dependency: Refer to: p2651, p2652

Note: In the operating mode "direct setpoint input/MDI", it is possible to make a flying changeover between setting-up and positioning.

For "setup" (BI: p2653 = 1 signal), the following applies:

A traversing direction must be selected via binector inputs p2651 and p2652.

p2654 CI: EPOS direct setpoint input/MDI mode adaptation / MDI mode adapt

SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)	**Can be changed:** C2(17), T	**Calculated:** -	**Access level:** 1
	Data type: Unsigned32 / Integer16	**Dyn. index:** -	**Func. diagram:** 3620
	P-Group: Basic positioner	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	-	-	0

Description: Sets the signal source to interconnect the MDI mode to the operating mode "direct setpoint input MDI" via PROFIBUS telegram 110.

CI: p2654 = 0

The binector inputs listed below are evaluated.

CI: p2654 > 0

The following binector inputs are not evaluated:

- BI: p2648 (positioning type)
- BI: p2651 (direction selection, positive)
- BI: p2652 (direction selection, negative)

In this case, the following definitions apply:

Signal via CI: p2654 = xx0x hex -> absolute

Signal via CI: p2654 = xx1x hex -> relative

Signal via CI: p2654 = xx2x hex -> abs_pos (only for modulo correction)

Signal via CI: p2654 = xx3x hex -> abs_neg (only for modulo correction)

Dependency: Refer to: p2648, p2651, p2652

p2655[0...1] BI: EPOS select tracking mode / Sel tracking mode

SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)

Can be changed: C2(17), T	**Calculated:** -	**Access level:** 1
Data type: Unsigned32 / Binary	**Dyn. index:** -	**Func. diagram:** 3635
P-Group: Basic positioner	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	[0] 1 [1] 2526.7

Description: Sets the signal source to select tracking mode.

BI: p2655[0] or BI: p2655[1] = 1 signal

Tracking mode after withdrawing the enable signal from EPOS (BI: p2656 = 0 signal).

BI: p2655[0] or BI: p2655[1] = 0 signal

No tracking mode after withdrawing the enable signal from EPOS (BI: p2656 = 0 signal).

Dependency: Refer to: p2656

Notice: The parameter may be protected as a result of p0922 or p2079 and cannot be changed.

Note: For the following events, independent of the signal that is present, tracking mode is selected:

- after booting.
- after a 0/1 signal at binector input p2658 (feedback signal, EPOS position actual value valid).
- while a fault is present.

p2656 BI: EPOS enable basic positioner / EPOS enable

SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)

Can be changed: C2(17), T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32 / Binary	**Dyn. index:** -	**Func. diagram:** 3635
P-Group: Basic positioner	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	2526.3

Description: Sets the signal source to enable the basic positioner.

BI: p2656 = 1 signal

The basic positioner is enabled.

BI: p2656 = 0 signal

The basic positioner is not enabled.

Dependency: Refer to: r2526, p2655

p2657 CI: EPOS position actual value/position setting value / Pos act/set value

SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)

Can be changed: C2(17), T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32 / Integer32	**Dyn. index:** -	**Func. diagram:** 3610, 3616, 3620, 3635
P-Group: Basic positioner	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	2521[0]

Description: Sets the signal source for the position actual value/position setting value.

Dependency: Refer to: r2521, p2658

Note: In the tracking mode, the position setpoint is taken from this connector input.

p2658 BI: EPOS position actual value valid feedback signal / Pos valid feedback

SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)

Can be changed: C2(17), T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32 / Binary	**Dyn. index:** -	**Func. diagram:** 3635
P-Group: Basic positioner	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	2526.0

Description: Sets the signal source for the feedback signal "position actual value is valid".

BI: p2658 = 1 signal

The position actual value received via CI: p2657 is valid.

BI: p2658 = 0 signal

The position actual value received via CI: p2657 is invalid.

Dependency: Refer to: r2526, p2657

Note: While a 0 signal is present, the position setpoint (p2665) is held at the value of 0.

p2659 BI: EPOS referencing active feedback signal / Ref act fdbk

SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)

Can be changed: C2(17), T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32 / Binary	**Dyn. index:** -	**Func. diagram:** 3612
P-Group: Basic positioner	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	2526.1

Description: Sets the signal source for the feedback signal "referencing active".

BI: p2659 = 1 signal

Referencing is active.

BI: p2659 = 0 signal

Referencing is not active.

Dependency: Refer to: r2526

p2660 CI: EPOS measured value referencing / Meas val ref

SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)

Can be changed: C2(17), T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32 / Integer32	**Dyn. index:** -	**Func. diagram:** 3612, 3614
P-Group: Basic positioner	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	2523[0]

Description: Sets the signal source for the measured value for the function "referencing".

Dependency: Refer to: r2523

p2661 BI: EPOS measured value valid feedback signal / MeasVal valid fdbk

SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)

Can be changed: C2(17), T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32 / Binary	**Dyn. index:** -	**Func. diagram:** 3612, 3614, 3615
P-Group: Basic positioner	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	2526.2

Description: Sets the signal source for the feedback signal "measured value valid".

BI: p2661 = 1 signal

The measured value received via CI: p2660 is valid.

BI: p2661 = 0 signal

The measured value received via CI: p2660 is invalid.

Dependency: Refer to: r2526, p2660

p2662 BI: EPOS adjustment value valid feedback signal / Adj val valid FS

SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)

Can be changed: C2(17), T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32 / Binary	**Dyn. index:** -	**Func. diagram:** -
P-Group: Basic positioner	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	2526.9

Description: Sets the signal source for the feedback signal "adjustment value valid".

BI: p2662 = 1 signal

The adjustment value received via CI: p2660 is valid.

BI: p2662 = 0 signal

The adjustment value received via CI: p2660 is not valid.

Dependency: Refer to: r2526, p2660

p2663 BI: EPOS clamping active feedback signal / Clamping active FS

SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)

Can be changed: C2(17), T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32 / Binary	**Dyn. index:** -	**Func. diagram:** 3616
P-Group: Basic positioner	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	2526.8

Description: Sets the signal source for the feedback signal "clamping active for travel to fixed stop".

BI: p2663 = 1 signal

Clamping is active

BI: p2663 = 0 signal

Clamping is not active.

Dependency: Refer to: r2526

Note: The feedback signal from "terminals active" is, for the factory setting, dependent on the signal BO: r2526.8 (terminals active when moving to a fixed stop).

r2665 CO: EPOS position setpoint / s_set

SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)

Can be changed: -	**Calculated:** -	**Access level:** 1
Data type: Integer32	**Dyn. index:** -	**Func. diagram:** 3635
P-Group: Basic positioner	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
- [LU]	- [LU]	- [LU]

Description: Displays the actual absolute position setpoint.

Dependency: Refer to: p2530

Note: As standard, the following BICO interconnection is established: CI: p2530 = r2665

r2666 CO: EPOS velocity setpoint / v_set

SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)

Can be changed: -	**Calculated:** -	**Access level:** 1
Data type: Integer32	**Dyn. index:** -	**Func. diagram:** 3635
P-Group: Basic positioner	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
- [1000 LU/min]	- [1000 LU/min]	- [1000 LU/min]

Description: Displays the actual velocity setpoint.

Dependency: Refer to: p2531

Note: As standard, the following BICO interconnection is established: CI: p2531 = r2666

r2667 CO: EPOS backlash compensation value / Backlash value

SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)

Can be changed: -	**Calculated:** -	**Access level:** 1
Data type: Integer32	**Dyn. index:** -	**Func. diagram:** 3635
P-Group: Basic positioner	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
- [LU]	- [LU]	- [LU]

Description: Displays the actual effective value for backlash compensation.

Dependency: Refer to: p2516

Note: As standard, the following BICO interconnection is established: CI: p2516 = r2667

r2669 CO/BO: EPOS actual operating mode / Op mode act

SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)

Can be changed: -	**Calculated:** -	**Access level:** 1
Data type: Integer32	**Dyn. index:** -	**Func. diagram:** 3625, 3630
P-Group: Basic positioner	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the actual active operating mode.

Value = 00 hex -> no operating mode active

Value = 01 hex -> jogging active

Value = 02 hex -> search for reference active

Value = 04 hex -> traversing blocks active

Value = 08 hex -> Positioning for direct setpoint input/MDI active

Value = 10 hex -> Setting-up for direct setpoint input/MDI active

Value = 20 hex -> flying referencing active

Dependency: Refer to: p2589, p2590, p2595, p2631, p2647, p2653

r2670.0...15 CO/BO: EPOS status word active traversing block / ZSW act trav_block

SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)

Can be changed: -	**Calculated:** -	**Access level:** 1
Data type: Unsigned32	**Dyn. index:** -	**Func. diagram:** 3615, 3625, 3650
P-Group: Basic positioner	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the status word for the active traversing block.

r2670.0: Active traversing block, bit 0

...

r2670.5: Active traversing block, bit 5

r2670.15: MDI active

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Active traversing block bit 0	Active	Not active	-
01	Active traversing block bit 1	Active	Not active	-
02	Active traversing block bit 2	Active	Not active	-
03	Active traversing block bit 3	Active	Not active	-
04	Active traversing block bit 4	Active	Not active	-
05	Active traversing block bit 5	Active	Not active	-
15	MDI active	Active	Not active	-

Dependency: Refer to: p2631, p2647

Note: For bit 00 ... 05:

Displays the active traversing block in the traversing blocks operating mode.

For bit 15:

For a 1 signal, the operating mode - direct setpoint input/MDI - is active

r2671 CO: EPOS actual position setpoint / s_set act

SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)

Can be changed: -	**Calculated:** -	**Access level:** 1
Data type: Integer32	**Dyn. index:** -	**Func. diagram:** 3610, 3616, 3620
P-Group: Basic positioner	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
- [LU]	- [LU]	- [LU]

Description: Displays the position setpoint presently being processed.

Note: A position of 0 is displayed for non position-related tasks (e.g. ENDLESS_POS, ENDLESS_NEG).

r2672 CO: EPOS actual velocity setpoint / v_set act

SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)

Can be changed: -	**Calculated:** -	**Access level:** 1
Data type: Integer32	**Dyn. index:** -	**Func. diagram:** 3610, 3612, 3616, 3620
P-Group: Basic positioner	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
- [1000 LU/min]	- [1000 LU/min]	- [1000 LU/min]

Description: Displays the velocity setpoint presently being processed.

r2673 CO: EPOS actual acceleration override / a_over act

SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)

Can be changed: -	**Calculated:** -	**Access level:** 1
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 3610, 3612, 3616, 3620
P-Group: Basic positioner	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
- [%]	- [%]	- [%]

Description: Displays the acceleration override presently being processed.

Note: An override of 100% is effective in the "jogging" and "search for reference" operating modes.

r2674 CO: EPOS actual deceleration override / -a_over act

SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)

Can be changed: -	**Calculated:** -	**Access level:** 1
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 3610, 3612, 3616, 3620
P-Group: Basic positioner	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
- [%]	- [%]	- [%]

Description: Displays the deceleration override presently being processed.

Note: An override of 100% is effective in the "jogging" and "search for reference" operating modes.

r2675 CO: EPOS actual task / Task act

SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)

Can be changed: -	**Calculated:** -	**Access level:** 1
Data type: Integer16	**Dyn. index:** -	**Func. diagram:** 3616
P-Group: Basic positioner	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	9	-

Description: Display and connector output for the order presently being processed.

Value:
0: Inactive
1: POSITIONING
2: FIXED STOP
3: ENDLESS_POS
4: ENDLESS_NEG
5: WAITING
6: GOTO
7: SET_O
8: RESET_O
9: JERK

Dependency: Refer to: p2621

r2676 CO: EPOS actual task parameter / Task para act

SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)

Can be changed: -	**Calculated:** -	**Access level:** 1
Data type: Integer32	**Dyn. index:** -	**Func. diagram:** 3616
P-Group: Basic positioner	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the task parameter presently being processed in the "traversing blocks" operating mode.

Dependency: Refer to: p2622

Note: The following is displayed depending on the task:
FIXED STOP: Clamping torque (0 ... 65536 [0.01 Nm]) or clamping force (0 ... 65536 [N])
WAIT: Delay time [ms]
GOTO: Block number
SET_O: 1, 2, 3 --> direct output 1, 2 or 3 (both) is set
RESET_O: 1, 2, 3 --> direct output 1, 2 or 3 (both) is reset
JERK: 0 --> deactivate, 1 --> activate

r2677 CO: EPOS actual task mode / Task mode act

SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)

Can be changed: -	**Calculated:** -	**Access level:** 1
Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** 3616
P-Group: Basic positioner	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the task mode presently being processed.

Dependency: Refer to: p2623

r2678 CO: EPOS external block change actual position / Ext BlckChg s_act

SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)

Can be changed: -	**Calculated:** -	**Access level:** 1
Data type: Integer32	**Dyn. index:** -	**Func. diagram:** 3615, 3616, 3620
P-Group: Basic positioner	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
- [LU]	- [LU]	- [LU]

Description: Displays the actual position for the following events:
- external block change via measuring probe (p2632 = 0, BI: p2661 = 0/1 signal).
- external block change via BI: p2633 (p2632 = 1, BI: p2633 = 0/1 signal).
- activate traversing task (BI: p2631 = 0/1 signal).

Dependency: Refer to: p2631, p2632, p2633, p2661

r2680 CO: EPOS clearance reference cam and zero mark / Clearance cam/ZM

SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)

Can be changed: -	**Calculated:** -	**Access level:** 1
Data type: Integer32	**Dyn. index:** -	**Func. diagram:** 3612
P-Group: Basic positioner	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
- [LU]	- [LU]	- [LU]

Description: Displays the clearance determined between the reference cam and zero mark in the search for reference.

r2681 CO: EPOS velocity override effective / v_over effective

SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)

Can be changed: -	**Calculated:** -	**Access level:** 1
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 3630
P-Group: Basic positioner	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
- [%]	- [%]	- [%]

Description: Displays the actual effective velocity override.

Dependency: Refer to: p2571, p2646

Note: The effective override can differ from the specified override due to limits (e.g. p2571, maximum velocity).

r2682 CO: EPOS residual distance to go / Residual distance

SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)

Can be changed: -	**Calculated:** -	**Access level:** 1
Data type: Integer32	**Dyn. index:** -	**Func. diagram:** 3635
P-Group: Basic positioner	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
- [LU]	- [LU]	- [LU]

Description: Displays the current residual distance.

The remaining distance is the distance to still to be moved through up to the end of the actual positioning task.

Dependency: Refer to: r2665, r2671, r2678

r2683.0...14 CO/BO: EPOS status word 1 / POS_ZSW1

SERVO (Lin, Pos ctrl), SERVO_AC (Lin, Pos ctrl)

Can be changed: -	**Calculated:** -	**Access level:** 1
Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** 3645
P-Group: Closed loop position control	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays status word 1 for the basic positioner (EPOS).

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Tracking mode active	Yes	No	3635, 4020
01	Velocity limiting active	Yes	No	3630
02	Setpoint fixed	Yes	No	3635
03	Set position reached	Yes	No	3635
04	Axis moves forward	Yes	No	3635
05	Axis moves backward	Yes	No	3635
06	Software limit switch minus reached	Yes	No	3635
07	Software limit switch plus reached	Yes	No	3635
08	Position actual value <= cam switching position 1	Yes	No	4025
09	Position actual value <= cam switching position 2	Yes	No	4025
10	Direct output 1 via traversing block	Yes	No	3616
11	Direct output 2 via traversing block	Yes	No	3616
12	Fixed stop reached	Yes	No	3616, 3617
13	Fixed stop clamping force reached	Yes	No	3616, 3617
14	Travel to fixed stop active	Yes	No	3616, 3617

Dependency: Refer to: r2684

Note: For bit 02, 04, 05, 06, 07:

This signals designate the state after jerk limiting.

For bits 08, 09:

These signals are generated in the "closed-loop position control" function module.

r2683.0...14 CO/BO: EPOS status word 1 / POS_ZSW1

SERVO (Pos ctrl), VECTOR (Pos ctrl), SERVO_AC (Pos ctrl), VECTOR_AC (Pos ctrl)

Can be changed: -	**Calculated:** -	**Access level:** 1
Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** 3645
P-Group: Closed loop position control	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays status word 1 for the basic positioner (EPOS).

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Tracking mode active	Yes	No	3635, 4020
01	Velocity limiting active	Yes	No	3630
02	Setpoint fixed	Yes	No	3635
03	Set position reached	Yes	No	3635
04	Axis moves forward	Yes	No	3635
05	Axis moves backward	Yes	No	3635
06	Software limit switch minus reached	Yes	No	3635
07	Software limit switch plus reached	Yes	No	3635
08	Position actual value <= cam switching position 1	Yes	No	4025
09	Position actual value <= cam switching position 2	Yes	No	4025
10	Direct output 1 via traversing block	Yes	No	3616
11	Direct output 2 via traversing block	Yes	No	3616
12	Fixed stop reached	Yes	No	3616, 3617
13	Fixed stop clamping torque reached	Yes	No	3616, 3617
14	Travel to fixed stop active	Yes	No	3616, 3617

Dependency: Refer to: r2684

Note: For bit 02, 04, 05, 06, 07:

This signals designate the state after jerk limiting.

For bits 08, 09:

These signals are generated in the "closed-loop position control" function module.

r2684.0...15 CO/BO: EPOS status word 2 / POS_ZSW2

SERVO (Pos ctrl), VECTOR (Pos ctrl), SERVO_AC (Pos ctrl), VECTOR_AC (Pos ctrl)

Can be changed: -	**Calculated:** -	**Access level:** 1
Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** 3646
P-Group: Closed loop position control	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays status word 2 for the basic positioner (EPOS).

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Search for reference active	Active	Not active	3612
01	Flying referencing active	Active	Not active	3614
02	Referencing active	Active	Not active	-
03	Printing mark outside outer window	Yes	No	3614
04	Axis accelerating	Yes	No	3635
05	Axis decelerating	Yes	No	3635
06	Jerk limiting active	Yes	No	3635
07	Activate correction	Yes	No	3635
08	Following error in tolerance	Yes	No	4025
09	Modulo correction active	Yes	No	-
10	Target position reached	Yes	No	4020

11	Reference point set	Yes	No	3612, 3614, 3630
12	Acknowledgment traversing block activated	Yes	No	3616, 3620
13	STOP cam minus active	Yes	No	3630
14	STOP cam plus active	Yes	No	3630
15	Traversing command active	Yes	No	3635

Note: For bit 02:

The "referencing active" signal is an OR logic operation of "search for reference active" and "flying referencing active".

For bit 00 ... 07 and 11 ... 14:

These signals are generated in the function module "basic positioner".

For bit 08:

The signal is generated in the "closed-loop position control" function module.

r2685 CO: EPOS corrective value / Correction value

SERVO (EPOS), VECTOR (EPOS), SERVO_AC (EPOS), VECTOR_AC (EPOS)

Can be changed: -	**Calculated:** -	**Access level:** 1

Min	**Max**	**Factory setting**
-	-	-

Description: Display and connector output for the reference quantity for speed and frequency (p2000).

All speeds or frequencies specified as relative value are referred to this reference quantity.

The reference quantity corresponds to 100% or 4000 hex (word) or 4000 0000 hex (double word).

This parameter has the unit rpm.

The following applies:

Reference frequency (in Hz) = reference speed (in rpm) / 60

Dependency: Refer to: p2000

Note: This BICO parameter provides the numerical value of the reference quantity p2000 as a connector output for interconnection with Drive Control Chart (DCC). The numerical value can be adopted unchanged from this connector output in DCC.

This BICO parameter is not suitable for interconnecting for cyclic communication.

r2700 CO: Reference velocity/reference frequency actual / v_ref/f_ref act

SERVO (Lin), SERVO_AC (Lin), SERVO_I_AC (Lin)

Can be changed: -	**Calculated:** -	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: -	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Display and connector output for the actual reference quantity for velocity and frequency.

All velocities or frequencies specified as relative value are referred to this reference quantity.

The reference quantity corresponds to 100% or 4000 hex (word) or 4000 0000 hex (double word).

The following applies:

Reference frequency (in Hz) = reference velocity (in m/min) / 60

Dependency: Refer to: p2000

Note: This parameter represents the numerical value of the reference quantity in the currently selected units and is only available for interconnection with Drive Control Chart (DCC).

If a BICO interconnection is established between different physical quantities, then the particular reference quantities are used as internal conversion factor.

Example 1:

The signal of an analog input (e.g. r4055[0]) is connected to a velocity setpoint (e.g. p1070[0]). The actual percentage input value is cyclically converted into the absolute velocity setpoint using the reference velocity (p2000).

Example 2:

The setpoint from PROFIBUS (r2050[1]) is connected to a velocity setpoint (e.g. p1070[0]). The actual input value is cyclically converted into a percentage value via the pre-specified scaling 4000 hex. This percentage value is converted to the absolute velocity setpoint via reference velocity (p2000).

r2700 CO: Reference frequency / f_ref

P-Group: -	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Connector output of the reference quantity p2003 for torque (r0108.12 = 0) or force (r0108.12 = 1).

All torques specified as relative values (r0108.12 = 0) or forces (r0108.12 = 1) are referred to this reference quantity.

The reference quantity corresponds to 100% or 4000 hex (word) or 4000 0000 hex (double word).

The unit of this parameter is the same as the unit selected for p2003.

Dependency: p0505, r0108.12

Refer to: p2003

Note: This BICO parameter provides the numerical value of the reference quantity p2003 in the currently selected unit as a connector output for interconnection with Drive Control Chart (DCC). The numerical value can be adopted unchanged from this connector output in DCC.

This BICO parameter is not suitable for interconnecting for cyclic communication.

r2703 CO: Reference force actual / Ref force cur

SERVO (Lin), HLA, SERVO_AC (Lin), SERVO_I_AC (Lin)

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: -	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the actual reference quantity for forces.

All forces specified as relative value are referred to this reference quantity.

The reference quantity corresponds to 100% or 4000 hex (word) or 4000 0000 hex (double word).

Dependency: p0505, r0108.12

Refer to: p2003

Note: This BICO parameter represents the numerical value of the reference quantity in the currently selected units and is only available for interconnection with Drive Control Chart (DCC).

This BICO parameter is not suitable for interconnecting for cyclic communication.

If a BICO interconnection is established between different physical quantities, then the particular reference quantities are used as internal conversion factor.

Example:

The actual value of the total force (r0079[0]) is connected to a test socket (e.g. p0771[0]). The actual force is cyclically converted into a percentage of the reference force (p2003) and output according to the parameterized scaling.

Description: Connector output of the reference quantity for powers p2004.

All power ratings specified as relative value are referred to this reference quantity.

The reference quantity corresponds to 100% or 4000 hex (word) or 4000 0000 hex (double word).

The unit of this parameter is the same as the unit selected for p2004.

Dependency: This value is calculated as voltage x current for the infeed and as torque x speed for closed-loop controls.

Refer to: r2004

Note: This BICO parameter provides the numerical value of the reference quantity p2004 in the currently selected unit as a connector output for interconnection with Drive Control Chart (DCC). The numerical value can be adopted unchanged from this connector output in DCC.

This BICO parameter is not suitable for interconnecting for cyclic communication.

The reference power is calculated as follows:

- 2 * Pi * reference speed / 60 * reference torque (motor)
- reference voltage * reference current * root(3) (infeed)

r2705 CO: Reference angle / Reference angle

SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, A_INF, S_INF, R_INF, B_INF, TM41

Can be changed: -	**Calculated:** -	**Access level:** 3

Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Connector output of the reference quantity for angles p2005.

All angles specified as relative value are referred to this reference quantity.

The reference quantity corresponds to 100% or 4000 hex (word) or 4000 0000 hex (double word).

This parameter has the unit degree.

Dependency: Refer to: p2005

Note: This BICO parameter provides the numerical value of the reference quantity p2005 as a connector output for interconnection with Drive Control Chart (DCC). The numerical value can be adopted unchanged from this connector output in DCC.

This BICO parameter is not suitable for interconnecting for cyclic communication.

r2706 CO: Reference temperature / Reference temp

SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, A_INF, S_INF, R_INF, B_INF, TM31, TM41, TM120, TM150

P-Group: -	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Connector output of the reference quantity for temperatures.

All temperatures specified as relative value are referred to this reference quantity.

The reference quantity corresponds to 100% or 4000 hex (word) or 4000 0000 hex (double word).

This parameter has the unit degree Celsius.

Note: This BICO parameter provides the numerical value of the reference quantity for the temperature as a connector output for interconnection with Drive Control Chart (DCC). The numerical value can be adopted unchanged from this connector output in DCC.

This BICO parameter is not suitable for interconnecting for cyclic communication.

r2707 CO: Reference acceleration / Ref accel

SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, TM41

Can be changed: -	**Calculated:** -	**Access level:** 3

Min	**Max**	**Factory setting**
-	-	-

Description: Connector output of the reference quantity for accelerations p2007.

All acceleration rates specified as relative value are referred to this reference quantity.

The reference quantity corresponds to 100% or 4000 hex (word) or 4000 0000 hex (double word).

The unit of this parameter is the same as the unit selected for p2007.

Dependency: r0108.12, p0505

Refer to: p2007

Note: This BICO parameter provides the numerical value of the reference quantity p2007 as a connector output for interconnection with Drive Control Chart (DCC). The numerical value in the currently selected unit can be adopted unchanged from this connector output in DCC.

This BICO parameter is not suitable for interconnecting for cyclic communication.

p2720[0...n] Load gear configuration / Load gear config

SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC

Can be changed: C2(1, 4)	**Calculated:** -	**Access level:** 1
Data type: Unsigned32	**Dyn. index:** DDS, p0180	**Func. diagram:** -
P-Group: Encoder	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0000 bin

Description: Sets the configuration for position tracking of a load gear.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Load gear activate position tracking	Yes	No	-
01	Axis type	Linear axis	Rotary axis	-
02	Load gear reset position	Yes	No	-

Note: For the following events, the non-volatile, saved position values are automatically reset:

- when an encoder replacement has been identified.
- when changing the configuration of the Encoder Data Set (EDS).
- when adjusting the absolute encoder again

p2721[0...n] Load gear rotary absolute encoder revolutions virtual / Abs rot rev

SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC

Can be changed: C2(1, 4)	**Calculated:** -	**Access level:** 1
Data type: Unsigned32	**Dyn. index:** DDS, p0180	**Func. diagram:** -
P-Group: Encoder	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	4194303	0

Description: Sets the number of rotations that can be resolved for a rotary absolute encoder with activated position tracking of the load gear.

Dependency: This parameter is only of significance for an absolute encoder (p0404.1 = 1) with activated position tracking of the load gear (p2720.0 = 1).

Note: The resolution that is set must be able to be represented using r2723.

For rotary axes/modulo axes, the following applies:

This parameter is pre-set with p0421 when activating position tracking and can be changed.

For linear axes, the following applies:

This parameter is pre-assigned with p0421 when activating position tracking, expanded by 6 bits for multiturn information (maximum number of overflows) and cannot be changed.

p2722[0...n] Load gear position tracking tolerance window / Pos track tol

SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC

Can be changed: C2(1, 4)	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** -
P-Group: Encoder	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.00	4294967300.00	0.00

Description: Sets a tolerance window for position tracking.

After the system is switched on, the difference between the saved position and the actual position is determined, and depending on this, the following is initiated:

Difference within the tolerance window --> The position is reproduced as a result of the encoder actual value.

Difference outside the tolerance window --> An appropriate message is output.

Dependency: Refer to: F07449

Caution: Rotation, for example through a complete encoder range is not detected.

Note: The value is entered in integer (complete) encoder pulses.

For p2720.0 = 1, the value is automatically pre-assigned quarter of the encoder range.

Example:

Quarter of the encoder range = (p0408 * p0421) / 4

It is possible that the tolerance window may not be able to be precisely set due to the data type (floating point number with 23 bit mantissa).

r2723[0...n] CO: Load gear absolute value / Load gear abs_val

SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC

Can be changed: -	**Calculated:** -	**Access level:** 1
Data type: Unsigned32	**Dyn. index:** DDS, p0180	**Func. diagram:** 4010, 4704
P-Group: Encoder	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the absolute value after the load gear.

Notice: The encoder position actual value must be requested using the encoder control word Gn_STW.13.

Note: The increments are displayed in the format the same as r0483.

r2724[0...n] CO: Load gear position difference / Load gear pos diff

SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC

Can be changed: -	**Calculated:** -	**Access level:** 1
Data type: Integer32	**Dyn. index:** DDS, p0180	**Func. diagram:** -
P-Group: Encoder	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the position difference before the load gear between switching off and switching on.

Note: The increments are displayed in the same format as for r0483/r2723.

If the measuring gear of the motor encoder is not activated, the position difference should be read in encoder increments.

If the measuring gear of the motor encoder is activated, the position difference is converted using the measuring gear factor.

p2730[0...3] BI: LR pos. actual value preprocessing activate neg. corr. (edge) / ActV_prep neg corr

SERVO (Pos ctrl), VECTOR (Pos ctrl), SERVO_AC (Pos ctrl), VECTOR_AC (Pos ctrl)

Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0000 bin

Description: Sets the configuration for the elasticity-based pole position identification.

Depending on the mechanical design (sequence: motor - encoder - brake) and on the braking force, the pole position identification routine can result in deflections with a different control sense.

For bit 00 = 0:

The deflection caused by the pole position identification acts in the positive control sense.

For bit 00 = 1:

The deflection caused by the pole position identification acts in the negative control sense.

This can only occur for a linear measuring system if a brake is installed between the machine and the measuring system and the brake is powerful enough to do this.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Sign change	Yes	No	-

Dependency: Refer to: p1980, p1981, p1982, p1983, r1984, r1985, r1986, r1987, p1990, r1992, p3091, p3092, p3093, p3094, p3095, p3096, r3097

Refer to: F07995

Note: PolID el: pole position identification, elasticity-based

P-Group: -	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	2	2

Description: Sets the mode for the time stamp

Value:
0: Operating hours
1: UTC format
2: Operating hours + 01.01.2000

Notice: For p3100 = 1:

The system prevents this setting from being changed. The parameter can only be influenced after "Set factory setting" or with a "Project download".

Note: RTC: Real-time clock

UTC: Universal Time Coordinates

For p3100 = 1:

Time of day synchronization is only possible with this setting.

The UTC time started, according to the definition on 01.01.1970 at 00:00:00 and is output in days and milliseconds.

p3101[0...1] Setting UTC time / Set UTC time

CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410

Can be changed: U, T	**Calculated:** -	**Access level:** 3

P-Group: -	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displaying the current UTC time.

Index:
[0] = Milliseconds
[1] = Days

Dependency: Refer to: p3100

Notice: The time display depends on the selected mode (p3100).

p3103 UTC synchronization process / UTC sync_process

CU_I, CU_NX_CX, CU_S_AC_DP, CU_S120_DP, CU_S150_DP, CU_I_D410

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Integer16	**Dyn. index:** -	**Func. diagram:** -
P-Group: -	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	3	0

Description: Setting the synchronization process.

Value:
0: PING/SNAP
1: Reserved
2: Parameter
3: Reserved

Dependency: Refer to: p3101, p3104

Note: For p3103 = 0:

The PING/SNAP technique allows the UTC time to be set with a high degree of accuracy using p3104 and p3101.

See the SINAMICS S120 Function Manual Drive Functions for more information.

For p3103 = 2:

Simply setting the UTC time via p3101.

For p3103 = 4:

Only for CU3x0-2 PN X150.

Synchronization via Network Time Protocol (NTP).

p3103 UTC synchronization process / UTC sync_process

CU_S_AC_PN, CU_S120_PN, CU_S150_PN

r3113.0...15 CO/BO: NAMUR message bit bar / NAMUR bit bar

All objects

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** -
P-Group: Messages	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Display and BICO output for the status of the NAMUR message bit bar.

The faults and alarms are assigned to the appropriate signaling/message classes and influence a specific message bit.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Fault converter information electronics/software error	Yes	No	-
01	Network fault	Yes	No	-
02	DC link overvoltage	Yes	No	-
03	Fault drive converter power electronics	Yes	No	-
04	Drive converter overtemperature	Yes	No	-
05	Ground fault	Yes	No	-

06	Motor overload	Yes	No	-
07	Bus error	Yes	No	-
08	External safety-relevant shutdown	Yes	No	-
09	Mot encoder fault	Yes	No	-
10	Error communication internal	Yes	No	-
11	Fault infeed	Yes	No	-
15	Other faults	Yes	No	-

Note: For bit 00:

Hardware or software malfunction was identified. Carry out a POWER ON of the component involved. If it occurs again, contact Technical Support.

For bit 01:

A line supply fault has occurred (phase failure, voltage level, ...). Check the line supply / fuses. Check the supply voltage. Check the wiring.

For bit 02:

The DC link voltage has assumed an inadmissibly high value. Check the dimensioning of the system (line supply, reactor, voltages). Check the infeed settings.

For bit 03:

An inadmissible operating state of the power electronics was identified (overcurrent, overtemperature, IGBT failure, ...). Check that the permissible load cycles are maintained. Check the ambient temperatures (fan).

For bit 04:

The temperature in the component has exceeded the highest permissible limit. Check the ambient temperature / control cabinet cooling.

For bit 05:

A ground fault / inter-phase short-circuit was detected in the power cables or in the motor windings. Check the power cables (connection). Check the motor.

For bit 06:

The motor was operated outside the permissible limits (temperature, current, torque, ...). Check the load cycles and limits that have been set. Check the ambient temperature / motor cooling.

For bit 07:

The communication to the higher-level control system (internal coupling, PROFIBUS, PROFINET, ...) is either faulted or interrupted. Check the state of the higher-level control system. Check the communication connection/wiring. Check the bus configuration / clock cycles.

For bit 08:

A safety operation monitoring function (Safety) has detected an error.

For bit 09:

When evaluating the encoder signals (track signals, zero marks, absolute values, ...) an illegal signal state was detected. Check the encoder / state of the encoder signals. Observe the maximum frequencies.

For bit 10:

The internal communication between the SINAMICS components is faulted or interrupted. Check the DRIVE-CLiQ wiring. Ensure an EMC-compliant design. Observe the maximum permissible quantity structure / clock cycles.

For bit 11:

The infeed is faulted or has failed. Check the infeed and the surroundings (line supply, filter, reactors, fuses, ...). Check the closed-loop infeed control.

For bit 15:

Group fault. Determine the precise cause of the fault using the commissioning tool.

r3114.9...11 CO/BO: Messages status word global / Msg ZSW global

CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410

Can be changed: -	**Calculated:** -	**Access level:** 2

P-Group: Displays, signals	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the global status word for messages.

The appropriate bit is set if at least one message is present at the drive objects.

Bit field:	Bit	Signal name	1 signal	0 signal	FP
	09	Group alarm present	Yes	No	8065
	10	Group fault present	Yes	No	8060
	11	Safety group message present	Yes	No	-

Note: The status bits are displayed with delay.

r3115[0...63] Fault drive object initiating / F DO initiating

All objects

Can be changed: - | **Calculated:** - | **Access level:** 3
Data type: Integer32 | **Dyn. index:** - | **Func. diagram:** 8050, 8060
P-Group: Messages | **Unit group:** - | **Unit selection:** -
Not for motor type: - | **Scaling:** - | **Expert list:** 1

Min	Max	Factory setting
-	-	-

Description: Displays the drive object number of the initiating drive object for this fault as integer number.

Value = 63:

The fault was initiated by the drive object itself.

Dependency: Refer to: r0945, r0947, r0948, r0949, r2109, r2130, r2133, r2136, r3120, r3122

Notice: The values of this parameter are only saved in a volatile fashion and are lost when switching off or for a warm restart.

Note: The buffer parameters are cyclically updated in the background (refer to status signal in r2139).

The structure of the fault buffer and the assignment of the indices is shown in r0945.

p3116 BI: Suppress automatic acknowledgment / Ackn suppress

CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410

Can be changed: U, T | **Calculated:** - | **Access level:** 3
Data type: Unsigned32 / Binary | **Dyn. index:** - | **Func. diagram:** -
P-Group: Messages | **Unit group:** - | **Unit selection:** -
Not for motor type: - | **Scaling:** - | **Expert list:** 1

Min	Max	Factory setting
-	-	0

Description: Sets the signal source for the automatic acknowledgment of Control Unit faults.

BI: p3116 = 0 signal

Acknowledgeable faults are automatically acknowledged on the Control Unit.

Control Unit faults with LOCAL propagation are passed on to the first active drive object.

BI: p3116 = 1 signal

Acknowledgeable faults are not automatically acknowledged on the Control Unit.

Control Unit faults with LOCAL propagation are not passed on.

Dependency: Refer to: p2102, p2103, p2104, p2105, p3981

Note: When selecting a standard telegram, the BICO interconnection for control signal STW1.10 (master control by PLC) is automatically established.

p3117 Change safety message type / Ch. SI mess type

CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410

Can be changed: C1(1) | **Calculated:** - | **Access level:** 3
Data type: Unsigned32 | **Dyn. index:** - | **Func. diagram:** -
P-Group: Messages | **Unit group:** - | **Unit selection:** -
Not for motor type: - | **Scaling:** - | **Expert list:** 1

Min	Max	Factory setting
0	1	0

Description: Sets the re-parameterization of all safety messages for faults and alarms.

The relevant message type during changeover is selected by the firmware.

0: Safety messages are not re-parameterized

1: Safety messages are re-parameterized

Note: A change only becomes effective after a POWER ON.

r3120[0...63] Component fault / Comp fault

All objects

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** -	**Func. diagram:** 8060
P-Group: Messages	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the component of the fault which has occurred.

Dependency: Refer to: r0945, r0947, r0948, r0949, r2109, r2130, r2133, r2136, r3122

Note: Value = 0: Assignment to a component not possible.

The buffer parameters are cyclically updated in the background (refer to status signal in r2139).

The structure of the fault buffer and the assignment of the indices is shown in r0945.

r3121[0...63] Component alarm / Comp alarm

All objects

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** -	**Func. diagram:** 8065
P-Group: Messages	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the component of the alarm which has occurred.

Dependency: Refer to: r2110, r2122, r2123, r2124, r2125, r2134, r2145, r2146, r3123

Note: Value = 0: Assignment to a component not possible.

The buffer parameters are cyclically updated in the background (refer to status signal in r2139).

The structure of the alarm buffer and the assignment of the indices is shown in r2122.

r3122[0...63] Diagnostic attribute fault / Diag_attr fault

All objects

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** -	**Func. diagram:** 8060
P-Group: Messages	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the diagnostic attribute of the fault which has occurred.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Hardware replacement recommended	Yes	No	-
15	Message has gone	Yes	No	-
16	PROFIdrive fault class bit 0	High	Low	-
17	PROFIdrive fault class bit 1	High	Low	-
18	PROFIdrive fault class bit 2	High	Low	-

Not for motor type: ASM, PMSM, REL, RESM	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.1 [%]	100.0 [%]	10.0 [%]

Description: Sets the threshold value for the "excitation current outside tolerance" message for the excitation current monitoring.

If the absolute value of the difference between the excitation current setpoint and actual value (r1641 - r1626) exceeds the threshold value and the hysteresis is longer than the selected delay time, then fault F07913 is output.

This fault is withdrawn when the threshold voltage is undershot.

Dependency: Refer to: r1626, r1641, p3202, p3203

Refer to: F07913

Note: The monitoring function is only carried out for separately excited synchronized motors (p0300 = 5).

p3202[0...n] Excitation current outside the tolerance hysteresis / I_exc n Tol hyst

Not for motor type: ASM, PMSM, REL, RESM	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.0 [s]	10.0 [s]	5.0 [s]

Description: Sets the delay time for the "flux outside tolerance" message for the flux monitoring.

Dependency: Refer to: p3204, p3205

Refer to: F07914

Note: The monitoring function is only carried out for separately excited synchronized motors (p0300 = 5).

The flux monitoring is only active after magnetizing (r0056.4 = 1).

p3207[0...n] Zero current signal threshold value / I_0_sig thresh

VECTOR, VECTOR_AC, VECTOR_I_AC

Can be changed: U, T	**Calculated:** CALC_MOD_LIM_REF	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** -
P-Group: Messages	**Unit group:** 6_2	**Unit selection:** p0505
Not for motor type: ASM, PMSM, REL, RESM	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.01 [Arms]	10000.00 [Arms]	1.00 [Arms]

Description: Sets the threshold value for the zero current signal for the zero current monitoring.

If the absolute current falls below the threshold value then r2199.6 is set to 1 after the delay time has expired. The bit is reset if the threshold value and the hysteresis are exceeded again.

Dependency: Refer to: r2199, p3208, p3209

Note: The monitoring function is only carried out for separately excited synchronized motors (p0300 = 5).

The monitoring is only carried out for speeds less than the speed threshold value in p2161 (r2199.0 = 1).

p3208[0...n] Zero current signal hysteresis / I_0_sig hyst

VECTOR, VECTOR_AC, VECTOR_I_AC

Can be changed: U, T	**Calculated:** CALC_MOD_LIM_REF	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** -

Not for motor type: ASM, PMSM, REL, RESM	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.01 [Arms]	10000.00 [Arms]	1.00 [Arms]

Description: Sets the hysteresis for the zero current signal for the zero current monitoring.

Dependency: Refer to: p3207, p3209

Note: The monitoring function is only carried out for separately excited synchronized motors (p0300 = 5).

The monitoring is only carried out for speeds less than the speed threshold value in p2161 (r2199.0 = 1).

p3209[0...n] Zero current signal delay time / I_0_sig t_del

VECTOR, VECTOR_AC, VECTOR_I_AC

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** -
P-Group: Messages	**Unit group:** -	**Unit selection:** -
Not for motor type: ASM, PMSM, REL, RESM	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.00 [s]	10.00 [s]	0.02 [s]

Description: Sets the delay time for the zero current signal for the zero current monitoring.

Dependency: Refer to: p3207, p3208

Note: The monitoring function is only carried out for separately excited synchronized motors (p0300 = 5).

The monitoring is only carried out for speeds less than the speed threshold in p2161 (r2199.0 = 1).

p3233[0...n] Torque actual value filter time constant / M_act_filt T

SERVO (Ext msg), VECTOR (Ext msg), SERVO_AC (Ext msg), VECTOR_AC (Ext msg), SERVO_I_AC (Ext msg), VECTOR_I_AC (Ext msg)

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 8013
P-Group: Messages	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0 [ms]	1000000 [ms]	0 [ms]

Description: Sets the time constant for the PT1 element to smooth the torque actual value.

The smoothed torque actual value is compared with the threshold values and is only used for messages and signals.

p3235 Phase failure signal motor monitoring time / Ph_fail t_monit

SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC

Can be changed: U, T	**Calculated:** -	**Access level:** 4
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Messages	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0 [ms]	2000 [ms]	320 [ms]

Description: Sets the monitoring time for phase failure detection of the motor.

Notice: After the value has been modified, no further parameter modifications can be made and the status is shown in r3996. Modifications can be made again when r3996 = 0.

Note: Monitoring is only effective for blocksize and booksize power units.

For p3235 = 0 the function is deactivated.

For VECTOR, the following applies:

The monitoring is automatically deactivated during a flying restart for a motor that is still rotating.

p3236[0...n] Speed threshold value 7 / n_thresh val 7

VECTOR, VECTOR_AC, VECTOR_I_AC

Can be changed: U, T	**Calculated:** CALC_MOD_LIM_REF	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 8012
P-Group: Messages	**Unit group:** 3_1	**Unit selection:** p0505
Not for motor type: REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.00 [rpm]	3000.00 [rpm]	100.00 [rpm]

Description: Sets the speed threshold value for the signal "speed deviation model/external in tolerance" (BO: r2199.7).

Dependency: Refer to: r1443, r2169, r2199, p3237

p3237[0...n] Hysteresis speed 7 / n_hysteresis 7

VECTOR, VECTOR_AC, VECTOR_I_AC

Can be changed: U, T	**Calculated:** CALC_MOD_LIM_REF	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 8012
P-Group: Messages	**Unit group:** 3_1	**Unit selection:** p0505
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.00 [rpm]	200.00 [rpm]	2.00 [rpm]

Description: Sets the hysteresis speed for the signal "speed deviation model/external" (BO: r2199.7).

Dependency: Refer to: r2199, p3236

p3238[0...n] OFF delay n_act_motor model = n_act external / t_del n_a = n_ext

VECTOR, VECTOR_AC, VECTOR_I_AC

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 8012
P-Group: Messages	**Unit group:** -	**Unit selection:** -
Not for motor type: REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.0 [s]	100.0 [s]	3.0 [s]

Description: Sets the OFF delay for the signal "speed deviation model/external in tolerance" (BO: r2199.7).

The smoothed actual speed of the motor model r2169 is compared with the externally measured speed r1443 (threshold value p3236).

Dependency: Refer to: p3236, p3237

p3240[0...n] CI: I2t input value signal source / I2t in_value s_src

VECTOR (Ext msg), VECTOR_AC (Ext msg), VECTOR_I_AC (Ext msg)

Can be changed: T	**Calculated:** -	**Access level:** 4
Data type: Unsigned32 / FloatingPoint32	**Dyn. index:** CDS, p0170	**Func. diagram:** 8022
P-Group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: ASM, PMSM, REL, RESM	**Scaling:** PERCENT	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0

Description: Sets the signal source for the input value of the freely parameterizable I2t monitoring.

Dependency: Refer to: p3241, p3242, p3243, r3244

Notice: To activate the freely parameterizable I2t monitoring, the following applies:

- the function module "Extended messages/monitoring" must be activated (r0108.17 = 1).
- the maximum duration must be set greater than zero (p3242 > 0).

Note: Application example:

Excitation current monitoring for the separately excited synchronous motor.

p3241[0...n] Permissible I2t continuous value / Perm I2t cont val

VECTOR (Ext msg), VECTOR_AC (Ext msg), VECTOR_I_AC (Ext msg)

Can be changed: U, T	**Calculated:** -	**Access level:** 4
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 8022
P-Group: -	**Unit group:** -	**Unit selection:** -
Not for motor type: ASM, PMSM, REL, RESM	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
10.00 [%]	200.00 [%]	100.00 [%]

Description: Sets the permissible continuous value of the freely parameterizable I2t monitoring.

The integrator value in r3244 decreases if the value received via connector input p3240 is higher than the value set in p3241.

The integrator value in r3244 increases if the value received via connector input p3240 is less than the value set in p3241.

Dependency: Refer to: p3240, p3242, p3243, r3244

p3242[0...n] I2t maximum duration / I2t max_dur

VECTOR (Ext msg), VECTOR_AC (Ext msg), VECTOR_I_AC (Ext msg)

Can be changed: U, T	**Calculated:** -	**Access level:** 4
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 8022
P-Group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: ASM, PMSM, REL, RESM	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.00 [s]	3600.00 [s]	0.00 [s]

Description: Sets the maximum duration for 100 % overload (corresponding to p3241 + 100 %) of the freely parameterizable I2t monitoring.

Setting example:

Operation should be possible at 150 % of the input quantity for a duration of 3 s for a permissible continuous value p3241 = 110 %.

As a consequence, the following settings value is obtained:

p3242 = ((150 x 150 - 110 x 110) / ((100 + 110) x (100 + 110) - 110 x 110) x 3 s = 0.975 s

Dependency: Refer to: p3240, p3241, p3243, r3244

Notice: For p3242 = 0, the freely parameterizable I2t monitoring is deactivated.

Note: After this time expires for 100 % overload, fault F07824 is output and status bit r2199.14 is set.

For lower overload conditions, the permissible duration extends corresponding to the specified setting example.

p3243[0...n] I2t alarm threshold / I2t alarm thresh

VECTOR (Ext msg), VECTOR_AC (Ext msg), VECTOR_I_AC (Ext msg)			
	Can be changed: U, T	**Calculated:** -	**Access level:** 4
	Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 8022
	P-Group: -	**Unit group:** -	**Unit selection:** -
	Not for motor type: ASM, PMSM, REL, RESM	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0.00 [%]	99.90 [%]	50.00 [%]

Description: Sets the alarm threshold for the I2t integrator value (r3244) scaled to 100 %.
When the alarm threshold is reached, alarm A07823 is output and status bit r2199.13 is set.

Dependency: Refer to: p3240, p3241, p3242, r3244

r3244 CO: Actual I2t integrator value / Act I2t integ_val

VECTOR (Ext msg), VECTOR_AC (Ext msg), VECTOR_I_AC (Ext msg)			
	Can be changed: -	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 8022
	P-Group: Closed-loop control	**Unit group:** -	**Unit selection:** -
	Not for motor type: ASM, PMSM, REL, RESM	**Scaling:** PERCENT	**Expert list:** 1
	Min	**Max**	**Factory setting**
	- [%]	- [%]	- [%]

Description: Display and connector output for the actual integrator value of the freely parameterizable I2t monitoring.
The value is scaled, so that the maximum permissible overload is reached at 100 %.

Dependency: Refer to: p3240, p3241, p3242, p3243

p3290 Variable signaling function start / Var sig start

SERVO, HLA, SERVO_AC, SERVO_I_AC			
	Can be changed: U, T	**Calculated:** -	**Access level:** 3
	Data type: Unsigned8	**Dyn. index:** -	**Func. diagram:** 5301
	P-Group: -	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	-	-	0010 bin

Description: Settings for start/stop and the comparison type for the variable signaling function.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Activate function	Active	Not active	-
01	Comparison with sign	With sign	Without sign	-

Dependency: Refer to: p3291, p3292, p3293, r3294, p3295, p3296, p3297, p3298, p3299
Refer to: A02085

Notice: The parameters of the variable message function are only checked and become effective when starting. Otherwise, an alarm is output.

p3291 CI: Variable signaling function signal source / Var sig S_src

SERVO, HLA, SERVO_AC, SERVO_I_AC			
	Can be changed: U, T	**Calculated:** -	**Access level:** 3
	Data type: Unsigned32 / Integer16	**Dyn. index:** -	**Func. diagram:** 5301
	P-Group: -	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	-	-	0

Description: Sets the signal source for the variable signaling function.

Dependency: Refer to: p3290, p3292, p3293

Notice: This parameter is only checked and becomes effective when restarting the variable message function.

Note: For p3291 = 1: (internal Siemens):
In this case, the signal source is defined via the memory address (p3292) and the data type (p3293).
As the memory address can be different for each version, it must always be redetermined.
Procedure:
- set the memory address and data type (p3292, p3293).
- establish the BICO interconnection (p3291 = 1).

p3292 Variable signaling function signal source address / Var sig S_src addr

SERVO, HLA, SERVO_AC, SERVO_I_AC

Can be changed: U, T	**Calculated:** -	**Access level:** 4
Data type: Unsigned32	**Dyn. index:** -	**Func. diagram:** 5301
P-Group: -	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0000 hex	FFFF FFFF hex	0000 hex

Description: Sets the address of the signal source for the variable signaling function.

Dependency: Refer to: p3290, p3291

Caution: The software can crash if an incorrect address and data type are set.

Notice: This parameter is only checked and becomes effective when restarting the variable message function.

Note: This parameter should only be set for p3291 = 1.

p3293 Variable signaling function signal source data type / Var sig S_src type

SERVO, HLA, SERVO_AC, SERVO_I_AC

Can be changed: U, T	**Calculated:** -	**Access level:** 4
Data type: Integer16	**Dyn. index:** -	**Func. diagram:** 5301
P-Group: -	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	7	0

Description: Sets the data type of the signal source for the variable signaling function.

Value:
0: Unknown
1: U8, Unsigned8
2: I8, Signed8
3: U16, Unsigned16
4: I16, Signed16
5: U32, Unsigned32
6: I32, Signed32
7: Float, FloatingPoint32

Dependency: Refer to: p3290, p3291

Caution: The software can crash if an incorrect address and data type are set.

Notice: This parameter is only checked and becomes effective when restarting the variable message function.

Note: This parameter should only be set for p3291 = 1.

r3294 BO: Variable signaling function output signal / Var sig outp_sig

SERVO, HLA, SERVO_AC, SERVO_I_AC

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned8	**Dyn. index:** -	**Func. diagram:** 5301
P-Group: -	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Display and binector output of the output signal for the variable signaling function.

Dependency: Refer to: p3290, p3291, p3295, p3296, p3297, p3298

p3295 Variable signaling function threshold value / Var sig thresh_val

SERVO, HLA, SERVO_AC, SERVO_I_AC

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 5301
P-Group: -	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-340.28235E36	340.28235E36	0.000

Description: Sets the threshold value for the variable signaling function.

Dependency: Refer to: p3290

Notice: This parameter is only checked and becomes effective when restarting the variable message function.

p3296 Variable signaling function hysteresis / Var sig hyst

SERVO, HLA, SERVO_AC, SERVO_I_AC

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 5301
P-Group: -	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.000	340.28235E36	0.000

Description: Sets the hysteresis for the variable signaling function.

Dependency: Refer to: p3290

Notice: This parameter is only checked and becomes effective when restarting the variable message function.

p3297 Variable signaling function pickup delay / Var sig t_pickup

SERVO, HLA, SERVO_AC, SERVO_I_AC

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** 5301
P-Group: -	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0 [ms]	10000 [ms]	0 [ms]

Description: Sets the pickup delay for the variable signaling function.

Dependency: Refer to: p3290

Notice: This parameter is only checked and becomes effective when restarting the variable message function.
Values that do not comply with the following condition are rejected:
Pickup delay (p3297) >= sampling time (p3299)

Note: For a value of 0, the pickup delay is disabled.
The output signal is set if the condition for the 1 signal is fulfilled for longer than the selected time.

p3298 Variable signaling function dropout delay / Var sig t_dropout

SERVO, HLA, SERVO_AC, SERVO_I_AC

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** 5301
P-Group: -	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0 [ms]	10000 [ms]	0 [ms]

Description: Sets the dropout delay for the variable signaling function.

Dependency: Refer to: p3290

Notice: This parameter is only checked and becomes effective when restarting the variable message function.
Values that do not comply with the following condition are rejected:
Dropout delay (p3298) >= sampling time (p3299)

Note: For a value of 0, the dropout delay is disabled.
The output signal is reset if the condition for the 0 signal is fulfilled for longer than the selected time.

p3299 Variable signaling function sampling time / Var sig t_sample

SERVO, HLA, SERVO_AC, SERVO_I_AC

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 5301
P-Group: -	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
1.000 [ms]	4.000 [ms]	4.000 [ms]

Description: Sets the sampling time for the variable signaling function.

Dependency: Refer to: p3290

Notice: This parameter is only checked and becomes effective when restarting the variable message function.

The following must apply for the setting:

Sampling time (p3299) <= pickup delay (p3297), dropout delay (p3298)

Note: Only the following values can be set:

1.000, 2.000, 3.000, 4.000

r3313 Efficiency optimization 2 optimum flux / Optimum flux

VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 6722, 6837
P-Group: Displays, signals	**Unit group:** -	**Unit selection:** -
Not for motor type: PMSM, SESM, REL, RESM	**Scaling:** r2004	**Expert list:** 1
Min	**Max**	**Factory setting**
- [%]	- [%]	- [%]

Description: Displays the calculated, optimum flux.

Dependency: Refer to: p1401, p3315, p3316

Note: The function is activated via p1401.14 = 1.

p3315[0...n] Efficiency optimization 2 minimum flux limit value / Min flux lim val

VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 6722, 6837
P-Group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: PMSM, SESM, REL, RESM	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
10.0 [%]	200.0 [%]	50.0 [%]

Description: Sets the minimal limit value for the calculated optimum flux.

Dependency: Refer to: p1401, r3313, p3316

Note: The function is activated via p1401.14 = 1.

p3316[0...n] Efficiency optimization 2 maximum flux limit value / Max flux lim val

VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 6722, 6837
P-Group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: PMSM, SESM, REL, RESM	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
10.0 [%]	200.0 [%]	110.0 [%]

Description: Sets the maximum limit value for the calculated optimum flux.

Dependency: Refer to: p1401, r3313, p3315

Note: The function is activated via p1401.14 = 1.

p3320[0...n] Fluid flow machine power point 1 / Fluid_mach P1

VECTOR, VECTOR_AC, VECTOR_I_AC

Can be changed: U, T	**Calculated:** -	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** -
P-Group: Displays, signals	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.00	100.00	25.00

Description: For the energy-saving display of a fluid-flow machine, a typical flow characteristic P = f(n) with 5 points along the characteristic is required.

This parameter specifies the power (P) of point 1 as a [%].

The characteristic comprises the following value pairs:

Power (P) / speed (n)

p3320 / p3321 --> point 1 (P1 / n1)

p3322 / p3323 --> point 2 (P2 / n2)

p3324 / p3325 --> point 3 (P3 / n3)

p3326 / p3327 --> point 4 (P4 / n4)

p3328 / p3329 --> point 5 (P5 / n5)

Dependency: Refer to: r0041, p3321, p3322, p3323, p3324, p3325, p3326, p3327, p3328, p3329

Note: The reference value for power and speed is the rated power/rated speed.

The energy saved is displayed in r0041.

p3321[0...n] Fluid flow machine speed point 1 / Fluid_mach n1

VECTOR, VECTOR_AC, VECTOR_I_AC

Can be changed: U, T	**Calculated:** -	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** -
P-Group: Displays, signals	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.00	100.00	0.00

Description: For the energy-saving display of a fluid-flow machine, a typical flow characteristic P = f(n) with 5 points along the characteristic is required.

This parameter specifies the speed (n) of point 1 as a [%].

The characteristic comprises the following value pairs:

Power (P) / speed (n)

p3320 / p3321 --> point 1 (P1 / n1)

p3322 / p3323 --> point 2 (P2 / n2)

p3324 / p3325 --> point 3 (P3 / n3)

p3326 / p3327 --> point 4 (P4 / n4)

p3328 / p3329 --> point 5 (P5 / n5)

Dependency: Refer to: r0041, p3320, p3322, p3323, p3324, p3325, p3326, p3327, p3328, p3329

Note: The reference value for power and speed is the rated power/rated speed.

The energy saved is displayed in r0041.

p3322[0...n] Fluid flow machine power point 2 / Fluid_mach P2

VECTOR, VECTOR_AC, VECTOR_I_AC

Can be changed: U, T	**Calculated:** -	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** -

Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.00	100.00	100.00

Description: For the energy-saving display of a fluid-flow machine, a typical flow characteristic P = f(n) with 5 points along the characteristic is required.

This parameter specifies the speed (n) of point 5 as a [%].

Dependency: Refer to: r0041, p3320, p3321, p3322, p3323, p3324, p3325, p3326, p3327, p3328

Note: The reference value for power and speed is the rated power/rated speed.
The energy saved is displayed in r0041.

p3370[0...n] Pulse technique configuration / Pulse config

VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)

Can be changed: U, T	**Calculated:** CALC_MOD_CON	**Access level:** 4
Data type: Unsigned16	**Dyn. index:** DDS, p0180	**Func. diagram:** -
P-Group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: ASM, SESM, REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0000 bin

Description: Select possible pulse technique configurations.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Select pulse techniques excitation adaptation	Yes	No	-
01	Select pulse techniques offset correction	Yes	No	-
02	Offset correction only close to no-load operation	Yes	No	-

Dependency: Refer to: p3371, p3372, p3373

p3371[0...n] Pulse technique excitation starting point 1 / Pulse excit pt 1

VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)

Can be changed: U, T	**Calculated:** CALC_MOD_CON	**Access level:** 4
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** -
P-Group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: ASM, SESM, REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.00 [Arms]	20000.00 [Arms]	0.00 [Arms]

Description: Sets application point 1 for the load current-dependent adapted value of the excitation amplitude of the pulse technique.

Dependency: Refer to: p1607, p3372, p3373

Note: The active excitation amplitude at application point 1 is specified by the setting value p1607.

p3372[0...n] Pulse technique excitation starting point 2 / Pulse excit pt 2

VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)

Can be changed: U, T	**Calculated:** CALC_MOD_CON	**Access level:** 4
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** -
P-Group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: ASM, SESM, REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.00 [Arms]	20000.00 [Arms]	0.00 [Arms]

Description: Sets application point 2 for the load current-dependent adapted value of the excitation amplitude of the pulse technique.

Dependency: Refer to: p1607, p3371, p3373

Note: The active excitation amplitude at application point 2 is specified by the setting value (p3373 * p1607).

p3373[0...n] Pulse technique excitation adaptation / Pulse excit scale

VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)

Can be changed: U, T	**Calculated:** CALC_MOD_CON	**Access level:** 4
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** -
P-Group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: ASM, SESM, REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0 [%]	1000 [%]	100 [%]

Description: Sets the adaptation value at application point 2 of the load current-dependent adapted excitation amplitude of the pulse technique.

Dependency: Refer to: p1607, p3371, p3372

Note: The active excitation amplitude at application point 2 is (p3373 * p1607).

r3374 CO: Pulse technique excitation actual / Pulse excit actual

VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Displays, signals	**Unit group:** -	**Unit selection:** -
Not for motor type: ASM, SESM, REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
- [mVs]	- [mVs]	- [mVs]

Description: Display and connector output for the currently active excitation amplitude of the pulse technique.

Dependency: Refer to: p1605, p1607, p1750, p3371, p3372, p3373

r3375[0...3] CO: Pulse technique response raw values / Pulse resp raw

VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)

Can be changed: -	**Calculated:** -	**Access level:** 4
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Displays, signals	**Unit group:** 6_5	**Unit selection:** p0505
Not for motor type: ASM, SESM, REL	**Scaling:** p2002	**Expert list:** 1
Min	**Max**	**Factory setting**
- [A]	- [A]	- [A]

Description: Displays the signal response raw values to the excitation of the pulse technique.

Index:
[0] = Phase R
[1] = Phase S
[2] = Alpha changed
[3] = Beta changed

Dependency: Refer to: p1605, p1607, p1750

r3376[0...2] Pulse technique model parameters / Pulse model

VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)

Can be changed: -	**Calculated:** -	**Access level:** 4
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Displays, signals	**Unit group:** -	**Unit selection:** -
Not for motor type: ASM, SESM, REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the parameters of the pulse model.

Pulse reluctances are displayed in the unit [A / Vs].

Index:
[0] = Pulse reluctance total
[1] = Pulse reluctance difference
[2] = Pulse reluctance cross

r3377[0...2] Pulse technique signals / Pulse signals

VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)

Can be changed: -	**Calculated:** -	**Access level:** 4
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Displays, signals	**Unit group:** -	**Unit selection:** -
Not for motor type: ASM, SESM, REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays signals of the pulse technique.

Index:
[0] = Offset correction correction component
[1] = Level relationship A priority
[2] = Anisotropy factor

p3400 Infeed configuration word / INF config_word

A_INF, S_INF, R_INF

Can be changed: T	**Calculated:** -	**Access level:** 2
Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** 8940
P-Group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0000 1010 bin

Description: Sets the configuration word of the infeed.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Smart Mode	ON	OFF	-
01	Flat-Top Mode	ON	OFF	-
03	Vdc controller	ON	OFF	-
05	Line supply voltage sensing with VSM	ON	OFF	-

Dependency: Refer to: p0210

Notice: For bit 00:

The following applies for Active Infeed chassis:

When used with an Active Interface Module (AIM), it is not permissible to activate the Smart Mode.

Note: For bit 00:

In the Smart Mode, the DC link voltage is not controlled - however, infeed can still regenerate. The magnitude of the DC link voltage depends on the actual line supply voltage and the DC link load.

The following applies for Active Infeed booksize:

When setting the device supply voltage (p0210) to greater than 415 V, then the Smart Mode is automatically activated. This means that the 660 V limit can be maintained for the steady-state DC link voltage (p0280) up to a line supply voltage of 480 V. If higher DC link voltages are permissible, then p0280 can be increased and the Smart Mode deactivated (see p0210).

For bit 01:

If the Flat Top Mode is deactivated, switching losses are higher. This means that the full power is no longer continuously available.

For p3400.0 = 1 or p1810.15 =1, this bit is not effective.

For bit 03:

If the Vdc controller is switched out, overvoltage or undervoltage conditions occur in the DC link if no other voltage-regulating component is located in the DC link.

For p3400.0 = 1, this bit is not effective.

For bit 05:

If a VSM is detected when commissioning the system, this bit is automatically set.

When the bit is set, the line supply voltage input of the VSM must be connected (connected at the line side of the line reactor).

The bit must be set in the case of chassis power units.

VSM: Voltage Sensing Module

r3402 Infeed internal state / INF state int

A_INF, S_INF, R_INF

Can be changed: -	**Calculated:** -	**Access level:** 2
Data type: Integer16	**Dyn. index:** -	**Func. diagram:** 8832, 8932
P-Group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	12	-

Description: Displays the internal status of the infeed module.

Value:

0: Initialization
1: Fault
2: No ON command
3: Offset measurement running
4: ON delay active
5: Precharging running
6: Pulse enable missing
7: Synchronization running

8: Voltage ramp-up active
9: Operation
10: Shutdown running
11: Identification running
12: Magnetization/black start running

r3402 Infeed status internal BIC / INF state int

B_INF

Can be changed: -	**Calculated:** -	**Access level:** 2
Data type: Integer16	**Dyn. index:** -	**Func. diagram:** 8932
P-Group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	6	-

Description: Displays the internal status of the infeed module.

Value:
0: Initialization
1: Fault
2: No ON command
3: Offset measurement running
4: ON delay active
5: Precharging running
6: Operation

r3405.0...7 CO/BO: Infeed status word / Inf ZSW

SERVO (Tech_ctrl), SERVO_AC (Tech_ctrl), SERVO_I_AC (Tech_ctrl), A_INF, S_INF, R_INF

Can be changed: -	**Calculated:** -	**Access level:** 2
Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** 8828, 8928
P-Group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Display and BICO output for the status word of the infeed unit.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Smart Mode active	Yes	No	-
01	Vdc controller active	Yes	No	-
02	Phase failure detected	Yes	No	-
03	Current limit reached	Yes	No	-
04	Infeed operates in generator/motor mode	Regenerative mode	Motor mode	-
05	Motor mode inhibited	Yes	No	-
06	Generator mode inhibited	Yes	No	-
07	DC link undervoltage alarm threshold undershot	Yes	No	-

Dependency: Refer to: A06810

Note: For bit 00:

Smart Mode is activated with p3400.0.

For bit 01:

The DC link voltage closed-loop control is activated with parameters p3400.3 and p3513.

For bit 02:

The bit is set if alarm A06205 (phase failure), A06206 (current asymmetry) or A06208 (voltage asymmetry) is output.

The bit is reset for the following events:

- the infeed had reached the normal operating state again after a phase failure has been bypassed/buffered (p3402 = 9).

- the pulse enable is withdrawn due to a fault or switching off with OFF1/OFF2.

- alarm A06206 is reset.

- alarm A06208 is reset.

For bit 03:

The present current limit is displayed in r0067.

For bit 04:

An active current setting r0078 >= 0 means infeed operation in motor mode; an active current setting r0078 < 0 means regenerative operation in generator mode.

For bit 05:
The motor mode inhibit is activated with p3532.
For bit 06:
The generator mode inhibit is activated with p3533.
For bit 07:
When the alarm threshold is fallen below, alarm A06810 is output and r3405.7 is set = 1.
The alarm threshold is obtained from the sum of the undervoltage threshold r0296 and offset p0279. As a consequence, the alarm threshold is only effective for p0279 > 0.
Monitoring only takes place when operational.
The following applies for states r3402 <= 5 and r3402 = 12: r3405.7 = 0.

r3405.1...8 CO/BO: Status word DC link control / ZSW Vdc_ctrl

VECTOR (Tech_ctrl), VECTOR_AC (Tech_ctrl), VECTOR_I_AC (Tech_ctrl)

Can be changed: -	**Calculated:** -	**Access level:** 2
Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** -
P-Group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Display and BICO output for the status word of the DC link voltage control.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
01	Vdc controller active	Yes	No	-
08	Vdc controller selected	Yes	No	-

Dependency: Refer to: A06810

Note: For bit 01:
DC link voltage control is disabled and enabled with p3513.
For bit 08 = 1:
DC link voltage control is selected using p3513.

r3405.7 CO/BO: Infeed status word / Inf ZSW

B_INF

Can be changed: -	**Calculated:** -	**Access level:** 2
Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** -
P-Group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Display and BICO output for the status word of the infeed unit.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
07	DC link undervoltage alarm threshold undershot	Yes	No	-

Dependency: Refer to: A06810

Note: For bit 07:
When the alarm threshold is fallen below, alarm A06810 is output and r3405.7 is set = 1.
The alarm threshold is obtained from the sum of the undervoltage threshold r0296 and offset p0279. As a consequence, the alarm threshold is only effective for p0279 > 0.
Monitoring only takes place when operational.
The following applies for states r3402 <= 5 and r3402 = 12: r3405.7 = 0.

p3409 Infeed line frequency setting / INF f_line_mode

A_INF, S_INF, R_INF

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: Integer16	**Dyn. index:** -	**Func. diagram:** -
P-Group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	1	1

Description: Sets the mode to detect the line supply frequency.

Value:
0: Line supply frequency setting 50/60 Hz off
1: Line supply frequency setting 50/60 Hz on

Dependency: Refer to: p0211, p0284, p0285

Refer to: A06350, A06351, F06500

Note: For p3409 = 1, the following applies:

After operation has been enabled, the rated line supply frequency (p0211) is automatically set to a value of 50 Hz or 60 Hz corresponding to the currently measured frequency. This means that the parameter value of p0211 is, under certain circumstances, changed.

For p3409 = 0, the following applies:

The system does not change parameter p0211.

p3410 Infeed identification method / INF Ident_type

A_INF, S_INF, R_INF

Can be changed: C2(1), T	**Calculated:** -	**Access level:** 1
Data type: Integer16	**Dyn. index:** -	**Func. diagram:** -
P-Group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	6	5

Description: Sets the line and DC link parameter identification routine for the infeed module.

Value:
0: Identification (Id) off
1: Activate identification (Id)
2: Set controller settings
3: Save identification and controller settings
4: Save identification and controller settings with L adaptation
5: Reset save Id and controller setting with L adaptation
6: Set robust current controller, C-identification and save

Dependency: Refer to: r3411, r3412, r3414, p3415, p3416, p3417, p3421, p3422, p3424, p3555, p3560, p3614

Refer to: A06400

Notice: For p3410 = 1, 3, 4, 5, 6, alarm A06400 is output, indicating that after the next pulse enable the set identification will take place.

The line and DC link adaptation is not permissible for Smart Line Modules in the chassis format.

During identification, no additional loads may be switched-in/switched out.

Mode p3410 = 6 is only permissible in conjunction with line filters p0220 > 110.

Note: p3410 is automatically set to 0 after an identification run has been completed.

When p3410 = 1 an identification run for the total inductance and DC link capacitance is initiated when the pulses are next enabled. The results are displayed in r3411 and r3412. If a Voltage Sensing Module (VSM) is connected, then the line inductance (r3414) is also measured. The infeed then goes into the ready for switching on state.

For p3410 = 2, the data (r3411, r3412 and r3414) determined during the identification run (p3410 = 1) are transferred into p3421, p3422 and p3424. The control loop parameters are suitably scaled to achieve a rugged controller setting (p3425); the fast controller response (p3555[2]) and the current actual value smoothing (p3614) are pre-set. Calculations for the controller are then repeated. The user must save the data in a non-volatile fashion so that the new controller setting is effective the next time that the system is switched on.

When p3410 = 3 an identification run for the inductance and DC link capacitance is initiated when the pulses are next enabled. Data determined during the identification (r3411, r3412, r3414) are used, as described under p3410 = 2 for the setting of p3421, p3422, p3424, p3425, p3555 as well as p3614, and the controller is re-calculated. All of the parameters for the infeed module are then automatically stored in a non-volatile memory. The infeed continues to operate without any interruption with the new controller parameters.

When p3410 = 4 an identification run for the inductance and DC link capacitance is initiated when the pulses are next enabled. Data determined during the identification (r3411, r3412, r3414) are used, as described under p3410 = 2 for the setting of p3421, p3422, p3424, p3425, p3555 as well as p3614, and the controller is re-calculated. The line inductance identification is then repeated, if p3415[1] > p3514[0]. If the inductance measured the second time is lower than the first, the parameters are written to the current controller adaptation (p3620, p3622). All of the parameters for the infeed module are then automatically stored in a non-volatile memory. The infeed continues to operate without any interruption with the new controller parameters.

For p3410 = 5, the same measurements and write operations are always carried-out as for p3410 = 4. However, initially the controller setting is reset by writing the default values dependent on the power unit to p3421, p3422 and p3424 - and setting p3425[0...1] = 100 %. Further, before the measurements are carried out, a brief identification run is executed to coarsely set the controller.

For p3410 = 6, with the next pulse enable, the system will initiate identification of the DC link capacitance. The data (r3412) determined during the identification is used to set the Vdc controller (p3422). All of the parameters for the infeed module are then automatically stored in a non-volatile fashion. The infeed continues to operate without any interruption with the new controller parameters. This identification mode is used to achieve a robust closed-loop control setting, and is only permissible in conjunction with p0220 > 110.

r3411[0...1] Infeed identified inductance / INF L ident

A_INF, S_INF, R_INF			
	Can be changed: -	**Calculated:** -	**Access level:** 2
	Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
	P-Group: Closed-loop control	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	- [mH]	- [mH]	- [mH]

Description: Displays the identified total inductance.

The value corresponds to the total inductance between the rigid line supply and the infeed input terminals.

Index: [0] = Run 1
[1] = Run 2

Dependency: Refer to: p3410

Note: The value measured in the first identification run is displayed in r3411[0] (for p3410 = 1, 3, 4, 5). This value is transferred to p3421.

The value measured in the second identification run (for p3410 = 4, 5) is displayed in r3411[1] - this value is used to set the current controller adaptation (p3622).

For a parallel connection, the inductance data corresponds to operation with just one power unit. A line-side filter reactor (p0228) is taken into account in the calculation.

For the inductance of the commutating reactor, the following applies.

r3411 - r3414

r3412[0...1] Infeed DC link capacitance identified / INF C_DClink ident

A_INF, S_INF, R_INF			
	Can be changed: -	**Calculated:** -	**Access level:** 2
	Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
	P-Group: Closed-loop control	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	- [mF]	- [mF]	- [mF]

Description: Displays the identified total DC link capacitance.

Index: [0] = Run 1
[1] = Run 2

Dependency: Refer to: p3410

Note: The value measured in the first identification run (for p3410 = 1, 3, 4, 5) is displayed in r3412[0]. For p3410 = 1, 3, this value is transferred to p3422.

The DC link capacitance is not measured at the second identification run.

The total DC link capacitance of a DC link group comprises the sum of the sub-capacitances of all motor/infeed modules and the additional DC link capacitors.

r3414[0...1] Infeed line supply inductance identified / INF t_line ident

A_INF, S_INF, R_INF

Can be changed: -	**Calculated:** -	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
- [mH]	- [mH]	- [mH]

Description: Displays the identified line supply inductance.

The value corresponds to the total inductance between the stiff line supply and the connection point of the Voltage Sensing Module (VSM), and also includes a line-side reactor integrated in the line filter.

Index: [0] = Run 1
[1] = Run 2

Dependency: Refer to: p3410

Notice: The value is only automatically determined for the line supply identification (p3410 > 0), if operation with a Voltage Sensing Module is selected (p3400.5 = 1). Otherwise, r3414 = 0 is displayed.

Note: The value measured in the first identification run is displayed in r3414[0] (for p3410 = 1, 3, 4, 5). This value is transferred to p3421.

The value measured in the second identification run is displayed in r3414[1] (for p3410 = 4, 5).

For a parallel connection, the inductance data corresponds to operation with just one power unit. A line-side filter reactor (p0228) is taken into account in the calculation.

For the inductance of the commutating reactor, the following applies.

r3411 - r3414

p3415[0...1] Infeed excitation current L identification / INF I_exc L-ident

A_INF, S_INF, R_INF

Can be changed: T	**Calculated:** -	**Access level:** 4
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
1.00 [%]	75.00 [%]	20.00 [%]

Description: Sets the magnitude of the excitation frequency for the L identification.

The setting is made as a percentage of the maximum power unit current (r0209).

Index: [0] = Run 1
[1] = Run 2

Dependency: Refer to: p3410, r3411, p3421, p3620, p3622

Notice: To correctly identify the current level (p3410 = 4, 5) depending on the reactor inductance, the following must apply:

p3415[0] < p3415[1]

For A_INF booksize units, the following applies:

The interrelationship between the reactor inductance and the current magnitude should be measured. Generally, the factory setting of p3415[0] and p3415[1] should be kept.

For chassis units and S_INF booksize units, the following applies:

Generally, there is only a very low inter-relationship between the reactor inductance and the current magnitude. This means that for the factory setting p3415[0] = p3415[1] = 20 %, i.e. run 2 is not executed.

Note: The reactive current for identification run 1 is set in p3415[0] (basic controller setting).

The reactive current for identification run 2 is set in p3415[1] (adaptation of the current controller when reducing the reactor inductance with increasing current magnitude).

p3416 Infeed excitation amplitude C identification / INF exc_amp C_Id

A_INF, S_INF, R_INF

Can be changed: T	**Calculated:** -	**Access level:** 4
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.10 [%]	20.00 [%]	2.00 [%]

Description: Sets the level of the excitation frequency for identification of the total DC link capacitance.

The amplitude is specified as a percentage of the setpoint DC link voltage (p3510).

Dependency: Refer to: p3410, r3412, p3422

p3417 Infeed excitation frequency C identification / INF f_exc C_ID

A_INF, S_INF, R_INF

Can be changed: T	**Calculated:** -	**Access level:** 4
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
10.00 [Hz]	200.00 [Hz]	50.00 [Hz]

Description: Sets the level of the excitation frequency for identification of the total DC link capacitance.

Dependency: Refer to: p3410, r3412, p3422

p3421 Infeed inductance / INF L

A_INF, S_INF, R_INF

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.001 [mH]	2000.000 [mH]	1.000 [mH]

Description: Sets the total effective inductance for the closed-loop current control from the sum of the line supply inductance and inductance of the line reactor.

The parameter is preassigned depending on p0223 and p0228.

Dependency: Refer to: p0223, p0225, p3410, p3425, p3614, p3622

Note: The controller setting is derived from this value and p3425.

The value can be automatically determined using the identification run (p3410).

For a parallel circuit, the value corresponds to the inductance of a power unit.

For the inductance value of the line reactor, p3421 - p3424 applies.

p3422 Infeed DC link capacitance / INF C_DCL

SERVO (Tech_ctrl), SERVO_AC (Tech_ctrl), SERVO_I_AC (Tech_ctrl), A_INF, S_INF, R_INF

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.20 [mF]	2000.00 [mF]	2.00 [mF]

Description: Sets the DC link capacitance for the closed-loop voltage control.

This value is pre-set with p0227.

Dependency: Refer to: p0227, p3410, p3425

Note: The controller setting is derived from this value and p3425.

A suitable value can be automatically determined using the identification run (p3410).

p3422 DC link capacitance total / C_DC tot

VECTOR (Tech_ctrl), VECTOR_AC (Tech_ctrl), VECTOR_I_AC (Tech_ctrl)

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.20 [mF]	2000.00 [mF]	2.00 [mF]

Description: Sets the total DC link capacitance for closed-loop voltage control.

The capacitance of one power unit is pre-assigned to this value. The value should be adapted according to the number of power units.

Note: The controller setting for the DC link voltage controller is derived from this value.

p3424 Infeed line supply inductance / INF L_line

A_INF, S_INF, R_INF

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.001 [mH]	1000.000 [mH]	0.001 [mH]

Description: Sets the line supply inductance.

This parameter is preassigned depending on p0225 and p0228.

Dependency: Refer to: p0223, p0225, p3410, p3425, p3622

Note: The controller setting is derived from this value and p3425.

The value can be automatically determined using the identification (p3410) if operation with a Voltage Sensing Module is selected. Otherwise, p3424 is set to p3421 - p0223.

For a parallel connection, the inductance data is applicable for operation with just one power unit.

p3425[0...5] Infeed control loop parameter scaling / INF par scal

A_INF, S_INF, R_INF

Can be changed: T	**Calculated:** -	**Access level:** 4
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
1.00 [%]	1000.00 [%]	100.00 [%]

Description: Setting of the scaling factors for controller parameters p3421, p3422, p3424, p3562 and p3617.

Index:
[0] = Inductance value for closed-loop control
[1] = Capacitance value for closed-loop control
[2] = Inductance value for decoupling
[3] = Inductance value for line model
[4] = Integral time current control
[5] = Integral time Vdc control

Dependency: Refer to: p3410, p3421, p3422, p3424, p3614

Note: For index [0, 1]:

p3425 is automatically and optimally set when setting the controller parameters with the line supply data identification p3410 >= 2.

As the line supply inductance (p3424) increases in comparison to the total inductance (p3421), lower values must be selected for p3425. This means that the control is adapted to weak line supplies with high relative short-circuit voltage uk or high line supply inductance (refer to p3614).

The scaled control loop parameters become effective for closed-loop control, i.e. the products p3421 * p3425[0] and p3422 * p3425[1] represent the controller setting.

For index [2]:

Sets the inductance value, which is used for the calculations in the decoupling block of the closed-loop current control.

The value of 100% corresponds to the inductance p3421 * p3425[0].

Setting values between 100 % and 200 % are recommended for fluctuating line fault levels.

For index [3]:

Sets the value for the line inductance, which is used for the calculations in the line (grid) model of the PLL.

The value of 100 % corresponds to inductance p3424.

Setting values up to 4x of p0223 are recommended for fluctuating line fault levels.

For index [4]:

The dynamic performance of the current control is defined by the scaling p3425[4] * p3617.

An optimized setting of p3425[4] is automatically realized by setting the controller parameters with the line data identification p3410 >= 2.

For index [5]:

The dynamic performance of the Vdc control is defined by the scaling p3425[5] * p3562.

An optimized setting of p3425[5] is automatically realized by setting the controller parameters with the line data identification p3410 >= 2.

p3440 Smart Mode configuration / Smart Mode config

A_INF, S_INF, R_INF

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** -
P-Group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0001 bin

Description: Sets the configuration of the Smart Mode.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Soft Pulse Mode	ON	OFF	-
01	Extended Smart Mode	ON	OFF	-
02	De-select automatic line identification after POWER ON	Yes	No	-

Notice: For bit 00:

This parameter influences the line harmonics for regenerative operation.

For operation with Active Interface Module (AIM) the soft-pulse mode must be activated.

For bit 01:

Operating BLM and SLM together (mixed operation) with bit 01 = 1 is not permissible.

Note: For bit 00:

When the pulsed mode for Smart Mode is deactivated, when regenerating, higher phase current gradients occur.

For Smart Line Modules in the "chassis" format, pulsed operation is not effective.

For bit 01:

For active Extended Smart Mode, for partial load operation, the line reactive power requirement must be reduced and the average value of the DC link voltage increased.

At rated load and overload, the operating behavior is equivalent to the Smart Mode (p3440.1 = 0).

For bit 02 (only effective for bit 01 = 1):

This line supply identification is only effective in the Extended Smart Mode (it should not be confused with the line supply identification using p3410).

The values for inductance and DC link capacitance are required for the Extended Smart Mode (p3448[0...1]).

Automatic line supply identification must be deselected (p3440.2 = 1) when manually entering p3448[0...1].

When automatic line supply identification is selected (p3440.2 = 0), these values are determined at the first pulse enable after each POWER ON and saved in p3448[0...1].

A new line supply identification with the next pulse enable can be initiated by setting p3440.2 = 1 and then by setting p3440.2 back to = 0.

p3441[0...1] Smart Mode Vdc ctrl Kp/Tn / SLM Vdc_ctrl Kp/Tn

A_INF, S_INF, R_INF	**Can be changed:** U, T	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
	P-Group: Closed-loop control	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0.00 [%]	1000.00 [%]	100.00 [%]

Description: Sets the standardized proportional gain (index 0) and the integral time (index 1) for the DC link voltage controller (Vdc controller) in Smart Mode.

Index: [0] = Proportional gain
[1] = Integral time

Note: A value of 100% corresponds to the basic setting derived from loop control parameters (p0115, p3409, p3448[1]).

p3442[0...1] Smart Mode smoothing times / SLM t_smooth

A_INF, S_INF, R_INF	**Can be changed:** U, T	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
	P-Group: Closed-loop control	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0.00 [ms]	20.00 [ms]	[0] 0.25 [ms] [1] 1.00 [ms]

Description: Sets the time constant for PT1 filtering of the DC link voltage for the Vdc controller (index 0) and the monitored DC link load current (index 1) in Smart Mode.

Index: [0] = DC link voltage actual value (r3445)
[1] = Monitored DC link load current (r3446[2])

Dependency: Refer to: r3445, r3446

p3443[0...1] Smart Mode line commutation current threshold values / SLM line com I_thr

A_INF, S_INF, R_INF	**Can be changed:** U, T	**Calculated:** -	**Access level:** 4
	Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
	P-Group: Closed-loop control	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0.00 [%]	1000.00 [%]	[0] 100.00 [%] [1] 200.00 [%]

Description: Sets the current threshold values for the deactivation (index 0) and activation (index 1) of line commutation in Smart Mode.

Index: [0] = Deactivation
[1] = Activation

Note: A value of 100% corresponds to the minimum feedback load current derived from the loop control parameters (p0210, p0211, p3409, p3448[0], p3432) without infeed components.

To avoid frequent changeovers in operation close to the changeover point, the value for activation (index 1) must be significantly higher than the value for deactivation (index 0).

p3444[0...3] Smart Mode voltages / SLM voltages

A_INF, S_INF, R_INF

Can be changed: U, T	**Calculated:** -	**Access level:** 4
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -

0.00 [%]	105.00 [%]	[0] 90.00 [%] [1] 100.50 [%] [2] 70.00 [%] [3] 70.00 [%]

Description: Sets voltage values for the Extended Smart Mode (p3440.1 = 1).

Index:
[0] = Minimum line voltage for feedback
[1] = DC link voltage setpoint
[2] = Line supply undervoltage threshold
[3] = Line supply symmetry threshold

Note: For index [0]:

Sets the minimum line voltage for regenerative feedback into the line supply (energy recovery).

If the voltage threshold is fallen below, feedback is deactivated to prevent the DC link voltage decaying in the event of a significant system voltage dip.

A value of 100% corresponds to the supply voltage set in p0210.

For index [1]:

Sets the DC link voltage setpoint.

A value of 100% corresponds to the rectified value of the actual line voltage.

The value must be greater than or equal to 100%.

For index [2]:

Sets the voltage threshold to identify a line supply undervoltage condition (A06205 with alarm value 32).

A value of 100 % corresponds to the voltage threshold set using p0283.

For index [3]:

Sets the voltage threshold for monitoring line supply symmetry.

A line supply undervoltage is signaled when this threshold is fallen below (A06205 with alarm value 32).

r3445[0...1] Smart Mode voltages display / SLM voltages disp

A_INF, S_INF, R_INF

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Displays, signals	**Unit group:** 5_2	**Unit selection:** p0505
Not for motor type: -	**Scaling:** p2001	**Expert list:** 1
Min	**Max**	**Factory setting**
- [V]	- [V]	- [V]

Description: Displays the various voltages in Smart Mode.

Index:
[0] = DC link voltage smoothed
[1] = DC link voltage setpoint

Dependency: Refer to: r0070, p3442

Note: The display values are only valid when the Smart Mode (p3400.0 = 1) has been activated and the pulses enabled.

For index [0]:

Displays the DC link voltage actual value measured and smoothed with p3442[0].

The smoothed value is used for the DC link voltage controller (Vdc controller) in Smart Mode.

The DC link voltage is also available unsmoothed (r0070).

For index [1]:

Displays the DC link voltage setpoint for the DC link voltage controller (Vdc controller) in Smart Mode.

r3446[0...2] Smart Mode currents / SLM currents

A_INF, S_INF, R_INF

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Displays, signals	**Unit group:** 6_4	**Unit selection:** p0505
Not for motor type: -	**Scaling:** p2002	**Expert list:** 1
Min	**Max**	**Factory setting**
- [A]	- [A]	- [A]

Description: Displays the various current values in Smart Mode.

Index:
[0] = DC link current setpoint
[1] = Vdc controller I component
[2] = Monitored DC link load current

Note: For index [0]:

Displays the DC link current setpoint requested by the DC link voltage controller (Vdc controller) in Smart Mode.

For index [1]:

Displays the I component of the DC link voltage controller (Vdc controller).

For index [2]:

Displays the monitored DC link load current.

r3447 Smart Mode OFF angle / SLM phi_OFF

A_INF, S_INF, R_INF

Can be changed: -	**Calculated:** -	**Access level:** 4
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Displays, signals	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** p2005	**Expert list:** 1
Min	**Max**	**Factory setting**
- [°]	- [°]	- [°]

Description: Displays the OFF angle requested by the DC link voltage controller (Vdc controller) in Smart Mode.

Note: A value = 30 ° deactivates feedback.

A value = 0 ° requests maximum feedback (line commutation).

p3448[0...1] Smart Mode inductance/DC link capacitance / SLM L/C

A_INF, S_INF, R_INF

Can be changed: U, T	**Calculated:** -	**Access level:** 4
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
10.00 [%]	10000.00 [%]	[0] 110.00 [%] [1] 100.00 [%]

Description: Sets the inductance and/or the DC link capacitance for the Extended Smart Mode.

Index:
[0] = Inductance referred to p0223
[1] = DC link capacitance referred to p0227

Notice: When automatic line supply identification is selected for the Extended Smart Mode (p3440.2 = 0), the following applies:

- the inductance and DC link capacitance values are calculated at the first pulse enable after each POWER ON and saved in p3448[0...1].

- the value range of the automatic identification is limited (100 % <= p3448[0...1], p3448[0] <= 100 % + 100 % / p0120). As a consequence, the preassigned values for the commutation inductance (p0223) and the DC link capacitance (p0227) must be correctly entered.

- values entered manually are overwritten after the next POWER ON.

When automatic line supply identification is deselected for the Extended Smart Mode (p3440.2 = 1), the following applies:

- the inductance and DC link capacitance values must be entered manually.

Note: For index [0]:

The value is used in the calculation of the reference value of p3443 and in the controller models.

A value of 100% corresponds to the inductance parameterized in p0223.

For a parallel circuit, the value corresponds to the inductance of a power unit.

Values less than 100 % do not make sense - and indicate an incorrect setting of p0223 or unsuitable operating points for the line supply identification (p3440.2).

For index [1]:

The value is used in the calculation of the reference value of p3441 and in the controller models.

A value of 100% corresponds to the capacitance parameterized in p0227.

The value includes the capacitances of all modules connected on the DC link.

Values less than 100 % do not make sense - and indicate an incorrect setting of p0227 or unsuitable operating points for the line supply identification (p3440.2).

r3452 Infeed PLL status / INF PLL status

A_INF, S_INF, R_INF			
	Can be changed: -	**Calculated:** -	**Access level:** 4
	Data type: Integer16	**Dyn. index:** -	**Func. diagram:** -
	P-Group: Closed-loop control	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0	7	-

Description: Displays the status of the line supply PLL.

Value:
0: Initialization running
1: Error when synchronizing
2: Line analysis
3: Calculation line data
4: Pulse enable missing
5: PLL calculation
6: Final status controlled / Smart Mode
7: Reserved

p3457[0...2] Infeed PLL supplementary settings / INF PLL suppl_set

A_INF, S_INF, R_INF			
	Can be changed: U, T	**Calculated:** -	**Access level:** 4
	Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
	P-Group: Closed-loop control	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0.00 [%]	300.00 [%]	0.00 [%]

Description: Sets the scaling values for the line PLL of the infeed.

Index:
[0] = Synchronization fixed voltage value
[1] = Synchronization angular offset
[2] = Synchronization angular linearity

Dependency: Refer to: A06205, F06500

Notice: The default settings only have to be changed in exceptional cases.

Unsuitable parameter values result in overcurrents and overvoltages.

Note: The setting values are only directly effective for pulse enable or for line synchronization. For adaptations, which are also effective in operation, the PLL can be switched over to the configurable transformer model (p5495).

For index [0]:

The setting value is used to finely adjust PLL line synchronization.

For setting values not equal to 0, p3457[0] * p0210 is set as output voltage for pulse enable. This is especially practical for booksize devices without VSM line voltage measurement.

For index [1]:

The setting value is used to finely adjust PLL line synchronization, and when the pulses are enabled, is added to the line angle that is measured.

The value of 100% corresponds to an angle of 180 °.

For index [2]:

When synchronizing, the linearity of the phase angle is determined in order to check the line quality, and for instance, to detect whether a phase has failed (A06205, F06500). The setting value is used to scale this linearity measured value.

Setting values less than 100 % reduce the sensitivity of the line supply check, for example.

A setting value of 0 % deactivates scaling.

p3458[0...1] Infeed PLL smoothing time / INF PLL t_smooth

A_INF, S_INF, R_INF

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
1.0 [ms]	1000.0 [ms]	[0] 23.1 [ms] [1] 9.1 [ms]

Description: Sets the smoothing time for the line supply PLL.

Index:
[0] = Encoderless operation line supply frequency smoothing time
[1] = VSM operation line supply frequency smoothing time

Note: It may be necessary to reduce the smoothing time for weak line supplies with high frequency fluctuations. There is otherwise a risk of brief orientation errors and the infeed could fail.

r3460 Infeed PLL system deviation / INF PLL sys_dev

A_INF, S_INF, R_INF

Can be changed: -	**Calculated:** -	**Access level:** 4
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
- [°]	- [°]	- [°]

Description: Displays the PLL system deviation.

r3461 Infeed PLL system deviation after filtering / INF PLL sys_dev sm

A_INF, S_INF, R_INF

Can be changed: -	**Calculated:** -	**Access level:** 4
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
- [°]	- [°]	- [°]

Description: Displays the PLL system deviation after filtering.

Dependency: Refer to: p3458

p3462[0...2] Infeed phase failure detection times / INF ph_fail_det t

A_INF, S_INF, R_INF

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.00 [s]	10000.00 [s]	[0] 0.00 [s] [1] 3.00 [s] [2] 60.00 [s]

Description: Sets the time values for phase failure detection and current symmetry monitoring.

Index:
[0] = Line fault max. duration
[1] = Current symmetry rms value smoothing time
[2] = Current symmetry fault delay time

Dependency: Refer to: p3465, r3466

Refer to: F06200, A06205, A06206, F06207

Note: For index [0]:

Sets the maximum permissible wait time for the line supply to return after identifying a line fault.

This parameter is used to define how long alarm A06205 may be continuously present. Fault F06200 is output after the wait time has expired.

For p3462[0] = 0, the following applies:

The time monitoring is deactivated. Fault F06200 is only output, if in addition to A06205, an additional message is initiated with a stop response.

For index [1]:

Sets the smoothing time to calculate the rms phase current values (r3466) for the current symmetry monitoring (p3465).

The smoothing time is internally limited to 30 s.

For index [2]:

Sets the delay time between the Alarm A06206 being permanently active until Fault F06207 is output for the current symmetry monitoring (p3465).

p3463 Infeed phase failure detection line supply angle change / INF ph_fail phi

A_INF, S_INF, R_INF

Can be changed: T	**Calculated:** -	**Access level:** 4
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-180.0 [°]	180.0 [°]	15.0 [°]

Description: If the line supply angle (angle between the line supply phases) suddenly changes by this value, then a phase failure is assumed. The pulses are then inhibited for 10 ms.

Dependency: Refer to: A06205

p3465[0...5] Infeed current symmetry monitoring thresholds / INF I_sym thresh

A_INF, S_INF, R_INF

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.0 [%]	200.0 [%]	[0] 60.0 [%] [1] 100.0 [%] [2] 25.0 [%] [3] 90.0 [%] [4] 100.0 [%] [5] 12.5 [%]

Description: Sets scaling values for monitoring the symmetry between the phase currents (r3466).

The monitoring serves to identify continuous line phase failures in regular operation.

The monitoring for the current-controlled mode is deactivated if one of the indices 0, 1, 2 is set to zero.

The monitoring for the Smart Mode is deactivated if one of the indices 3, 4, 5 is set to zero.

Index:
[0] = Closed-loop control activation minimum current
[1] = Closed-loop control activation maximum current
[2] = Closed-loop control alarm asymmetry
[3] = Smart Mode activation minimum current
[4] = Smart Mode activation maximum current
[5] = Smart Mode asymmetry alarm

Dependency: Refer to: p3462, r3466

Refer to: A06205, F06207

Notice: Current symmetry monitoring is deactivated if the dynamic grid support (p5501) or the grid droop control (p5401) is activated. In these operating cases, asymmetrical loads should also be supplied.

The negative phase sequence system control (p3640) controls the current asymmetry - and includes an additional symmetry monitoring of the output voltage (p3647).

Note: The smoothing time constant for the phase current rms values r3466[0, 1, 2] can be set with p3462[1].

For index [0, 1]:

Sets the current thresholds for activating symmetry monitoring in current-controlled operation (p3400.0 = 0).

Monitoring is active if at least one rms phase current value r3466 is greater than p3465[0] * r0207 - and at least one rms phase current value is less than p3465[1] * r0207.

For index [2]:

Sets the alarm threshold for the symmetry of the phase currents in the current-controlled mode.

The ratio between the lowest and highest rms phase current is monitored (r3466). The thus defined symmetry relationship decreases with increasing asymmetry – and always lies in the range of 0 ... 100 %.

In operation (r3452 >= 4) the following applies:

If the symmetry relationship is less than threshold p3465[2], then alarm A06206 is output and status bit r3405.2 = 1 is set.

If the alarm threshold is permanently exceeded for the time p3462[2], then the device is switched off with fault F06207.

For index [3, 4]:

Sets the current thresholds for activating symmetry monitoring in the Smart Mode (p3400.0 = 1).

The monitoring function is always active if at least one phase current rms value (r3466) is greater than p3465[3] * r0207 - and at least one phase current rms value is less than p3465[4] * r0207.

For index [5]:

Sets the alarm threshold for the symmetry of the phase currents in the Smart Mode.

The ratio between the lowest and highest rms phase current is monitored (r3466). The thus defined symmetry relationship decreases with increasing asymmetry – and always lies in the range of 0 ... 100 %.

In operation (r3452 >= 4) the following applies:

If the symmetry relationship is less than threshold p3465[5], then alarm A06206 is output and status bit r3405.2 = 1 is set.

If the alarm threshold is permanently exceeded for the time p3462[2], then the device is switched off with fault F06207.

r3466[0...2] CO: Infeed phase current rms value smoothed / INF I_ph rms sm

A_INF, S_INF, R_INF

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Closed-loop control	**Unit group:** 6_2	**Unit selection:** p0505
Not for motor type: -	**Scaling:** p2002	**Expert list:** 1
Min	**Max**	**Factory setting**
- [Arms]	- [Arms]	- [Arms]

Description: Display and connector output for the smoothed rms values of the measured phase currents.

Index:
[0] = Phase U
[1] = Phase V
[2] = Phase W

Dependency: Refer to: p3462, p3465

Refer to: A06206, F06207

Note: The smoothed rms values are used to monitor the symmetry of the phase currents (p3465).

The smoothing time constant is set with p3462[1].

r3467[0...3] CO: Infeed current alpha/beta / INF I a/b

A_INF, S_INF, R_INF

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
- [A]	- [A]	- [A]

Description: Display and connector output for the line current in alpha/beta components.

Index:
[0] = Alpha
[1] = Beta
[2] = Alpha
[3] = Beta

Note: For index [0, 1]:
Displays the line current at the input terminals of the line filter.
For index [2, 3]:
Displays the line current at the input terminals of the power unit.

r3468[0...5] CO: Infeed voltage alpha/beta / INF U a/b

A_INF, S_INF, R_INF

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
- [V]	- [V]	- [V]

Description: Display and connector output for the line supply voltage at the input terminals of the line filter in alpha/beta components.

Index:
[0] = Alpha
[1] = Beta
[2] = Alpha
[3] = Beta
[4] = Alpha
[5] = Beta

Note: For index [0, 1]:
The input terminals of the line filter form, for infeeds, the connection point of the Voltage Sensing Module (VSM) to measure the line supply voltage.
For operation with VSM (p3400.5 = 1), the following applies:
The voltage measured values r3661 and r3662, transformed into the alpha/beta system are displayed in r3468.
For encoderless operation without VSM (p3400.5 = 0), the following applies:
The estimated values of the voltages from the line supply model of the PLL transformed into the alpha/beta system are displayed in r3468.
For index [2, 3]:
The basic fundamental amplitudes of the clocked inverter output voltages are displayed.
The values are only valid when operation is enabled.
For index [4, 5]:
The basic fundamental amplitudes of the voltage source calculated using a line model are displayed.
The values are only valid when operation is enabled.

p3469[0...n] Latch delay time correction, zero crossover detection / t_latch corr PLL

A_INF, S_INF, R_INF

Can be changed: T	**Calculated:** -	**Access level:** 4
Data type: FloatingPoint32	**Dyn. index:** PDS, p0120	**Func. diagram:** -
P-Group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-10000.0 [µs]	10000.0 [µs]	0.0 [µs]

Description: Calibration value for the RC filter of the zero crossover detection of the line supply voltage in the power unit.
When p3469 = 0, a new calibration is performed the next time identification is carried out with p3410 = 4 or 5.

Note: The calibration value is stored in the EEPROM of the power unit because it is a characteristic of the power unit.

r3470 CO: Infeed active current filter / INF I_act filter

A_INF, R_INF

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Closed-loop control	**Unit group:** 6_2	**Unit selection:** p0505
Not for motor type: -	**Scaling:** p2002	**Expert list:** 1
Min	**Max**	**Factory setting**
- [Arms]	- [Arms]	- [Arms]

Description: Displays the active current requirement due to the line filter.

Dependency: Refer to: r0038, p0221, p0222

Note: With respect to the line supply, the sum of the active currents of the power unit (p0078) and line filter (r3470) are effective.

The active current demand of the line filter is taken into account when calculating the power factor (r0038).

The magnitude of the line filter active current depends on the capacitance (p0221) and the resistance (p0222) of the line filter.

r3471 CO: Infeed reactive current filter / INF I_reactiveFilt

A_INF, R_INF

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Closed-loop control	**Unit group:** 6_2	**Unit selection:** p0505
Not for motor type: -	**Scaling:** p2002	**Expert list:** 1
Min	**Max**	**Factory setting**
- [Arms]	- [Arms]	- [Arms]

Description: Displays the reactive current requirement as a result of the line filter.

The reactive current requirement of a line filter is covered by the controlled infeed/regenerative feedback so that the converter always operates with a power factor of 1 compared to the line.

Dependency: Refer to: r0038, r0075, r0076, p0221

Note: With respect to the line supply, the sum of the reactive currents of the power unit (p0076) and line filter (r3471) are effective.

The reactive current requirement of the line filter is taken into account when calculating the power factor (r0038).

The amount of the reactive current depends on the capacitance (p0221) of the line filter that is automatically parameterized when a line filter is selected (p0220).

If the line phases are reversed and the line voltage therefore has a negative orientation (r0066 < 0), it should be noted that the sign of the reactive current is reversed.

p3472[0...4] Line supply PLL line supply voltage smoothing time / Line PLL U_I t_sm

A_INF, S_INF, R_INF

Can be changed: U, T	**Calculated:** -	**Access level:** 4
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
1.0 [ms]	30000.0 [ms]	[0] 200.0 [ms] [1] 100.0 [ms] [2] 5000.0 [ms] [3] 8.0 [ms] [4] 8.0 [ms]

Description: Sets the smoothing time of the line supply voltage for the line supply PLL.

Index:
[0] = Encoderless operation line supply voltage smoothing time
[1] = VSM operation line supply voltage smoothing time
[2] = Detection line supply undervoltage smoothing time
[3] = Detection line supply overvoltage smoothing time
[4] = Detection line supply voltage step smoothing time

Dependency: Refer to: p3400

Note: For the precontrol of the line supply voltage, a smoothed value of the line supply voltage is used in the closed-loop control.

p3472[0]:

Sets the PT1 time constant to smooth the line supply voltage for operation without VSM (p3400.5 = 0).

p3472[1]:

Sets the PT1 time constant to smooth the line supply voltage for operation with VSM (p3400.5 = 1).

p3472[2]:

Sets the smoothing time constant to slowly detect a line supply undervoltage (F06100).

p3472[3]:

Sets the smoothing time constant to quickly detect line supply overvoltages for phase failure (A06205).

p3472[4]:

Sets the smoothing time constant to quickly adapt the line supply precontrol for line supply voltage steps.

p3473[0...3] CI: cos phi display current signal source / cos phi I S_src

A_INF (cos phi), R_INF (cos phi)

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32 / FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 8951

[1] = Beta subsystem 1
[2] = Alpha subsystem 2
[3] = Beta subsystem 2

Dependency: Refer to: r3468

Note: Using p3475.1, the signal source format can be converted over from alpha/beta space vector coordinates to a 3-conductor representation. With this setting, measured values from the Voltage Sensing Module (VSM) can be directly interconnected (e.g. r5461[0]).

For index [0]:

Voltage alpha (voltage phase-phase 12) for r3478[0] space vector 1.

For index [1]:

Voltage beta (voltage phase-phase 23) for r3478[0] space vector 1.

For index [2]:

Voltage alpha (voltage phase-phase 12) for r3478[1] space vector 2.

For index [3]:

Voltage beta (voltage phase-phase 23) for r3478[1] space vector 2.

p3475[0...1] cos phi display configuration / cos phi config

A_INF (cos phi), R_INF (cos phi)

Can be changed: T	**Calculated:** -	**Access level:** 2
Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** 8951
P-Group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0000 bin

Description: Sets the configuration for the cos phi display.

Index:
[0] = Space vector 1
[1] = Space vector 2

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	cos phi display activation	ON	OFF	-
01	Signal sources in 3-conductor coordinates	Yes	No	-
02	Signal source phase sequence negated (negative frequency)	Yes	No	-

Note: For bit 00:

For p3475[0].0 = 1 the values in r3477[0] and p3478[0] are updated.

For p3475[1].0 = 1 the values in r3477[1] and p3478[1] are updated.

For bit 01:

For p3475.1 = 0, the following applies:

The format of the signal source in p3473 and p3474 is interpreted as alpha/beta space vector coordinates.

For p3475.1 = 1, the following applies:

The format of the signal source in p3473 and p3474 is interpreted as 3-conductor representation.

For bit 02:

When the bit is activated, the phase sequence of the signal source, interconnected via connector inputs p3473 and p3474, is negated with respect to the signals at the inputs of the infeed. For example, this is the case for a transformer with a phase rotation of 180 ° and the corresponding tapping of the signals.

For p3475.2 = 0, the following applies:

The phase sequence of the signal source in p3473 and p3474 is not negated.

For p3475.2 = 1, the following applies:

The phase sequence of the signal source in p3473 and p3474 is negated.

p3476[0...1] cos phi display smoothing time / cos phi t_smooth

A_INF (cos phi), R_INF (cos phi)

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 8951
P-Group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.00 [ms]	2000.00 [ms]	200.00 [ms]

Description: Sets the smoothing time for the cos phi display.

Index:
[0] = Space vector 1
[1] = Space vector 2

r3477[0...1] CO: cos phi display actual value sign / cosphi actVal sign

A_INF (cos phi), R_INF (cos phi)

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 8951
P-Group: Displays, signals	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** p2001	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Display and connector output for the sign of the offset factor (cos phi).

The offset factor cos phi is defined as the cosine of the phase angle between the sinusoidal oscillation of the voltage and of the current of the fundamental frequency.

Note: The following definition of the signs corresponds with that used in the relevant standards relating to line supplies (e.g. VDE-AR-4105).

For under-excited operation (negative reactive current: r0076 < 0), the following applies:

Lower output voltage or lagging current is identified with a positive sign.

For over-excited operation (positive reactive current: r0076 > 0), the following applies:

Higher output voltage or leading current is identified with a negative sign.

r3478[0...1] CO: cos phi display absolute actual value / cos phi actVal abs

A_INF (cos phi), R_INF (cos phi)

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 8951
P-Group: Displays, signals	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** p2001	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Display and connector output for the absolute value of the offset factor (cos phi).

The offset factor cos phi is defined as the cosine of the phase angle between the sinusoidal oscillation of the voltage and of the current of the fundamental frequency.

Index: [0] = Space vector 1
[1] = Space vector 2

Notice: The current and voltage signals must come from the same line supply to which the Active Line Module is connected (identical line frequency).

p3475.2 can be used to compensate if the phase sequence is reversed with respect to the Active Line Module connection terminals.

p3479[0...1] cos phi display current measurement dead time / cosphi I_m t_dead

A_INF (cos phi), R_INF (cos phi)

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-10000.000 [µs]	10000.000 [µs]	620.000 [µs]

Description: Sets a dead time for the current measurement.

This means that a calibration of the current measuring instant ensures a precise cos phi measurement in 3-conductor coordinates.

Index: [0] = Space vector 1
[1] = Space vector 2

Notice: A calibration is only required for signal sources in 3-conductor coordinates (p3475.1 = 1).

Note: A calibration value can be checked as follows:

1. Set p3473[0, 1] = p3467[2, 3], configuration p3475[0] = 1.
2. Determining a cos phi reference value.
3. Set p3473[2, 3] = p3671, p3672, configuration p3475[1] = 3.
4. When the calibration value is correctly set, both indices of "cos phi display actual absolute value" p3478[0, 1] contain the same value.

p3480 Infeed modulation depth limit / INF mod_depth lim

A_INF, R_INF

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 8940
P-Group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
50.0 [%]	110.0 [%]	97.0 [%]

Description: Sets the maximum steady-state modulation depth.

When this limit is reached, the DC link voltage is boosted to maintain the control margin. This means that the control reserve is maintained.

Dependency: Refer to: p3481, r3485

p3481 Infeed standby controller dynamic response / INF res_ctrl dyn

A_INF, R_INF

Can be changed: U, T	**Calculated:** -	**Access level:** 4
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 8940
P-Group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.0 [ms]	1000.0 [ms]	7.5 [ms]

Description: Sets the dynamic response of the reserve controller for the modulation depth. As the smoothing time increases, the response of the DC link voltage tracking becomes slower.

Dependency: Refer to: p3480, r3485

r3485 Infeed standby controller output / INF res_ctrl outp

A_INF, R_INF

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 8940
P-Group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** p2001	**Expert list:** 1
Min	**Max**	**Factory setting**
- [V]	- [V]	- [V]

Description: Displays the reserve controller output for the modulation depth.

The DC link voltage is increased by this voltage value - the summed setpoint for the DC link voltage is output in r0088.

The summed setpoint is limited to the maximum steady-stage DC link voltage (p0280).

Dependency: Refer to: p3480, p3481

p3490 Infeed delay time OFF1 command / INF t_del OFF1

A_INF, S_INF, R_INF, B_INF

Can be changed: T	**Calculated:** -	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 8732, 8832, 8932
P-Group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.0 [ms]	1000000.0 [ms]	0.0 [ms]

Description: Sets the delay time for the ON/OFF1 command of the infeed.

After ON/OFF1 = 0 the infeed remains in operation for the specified time

Dependency: Refer to: p0840

Notice: The ON/OFF1 command of the infeed can be interrupted.

Note: This parameter is only relevant if a Motor Module and the infeed are controlled by the same OFF command. In this case, the delay time and the stop ramp time of the motor can be coordinated with one another.

p3491 Infeed I-offset measurement monitoring time / INF I_offs t_monit

A_INF, S_INF, R_INF

Can be changed: T	**Calculated:** -	**Access level:** 4
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 8832, 8932
P-Group: Commands	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0 [ms]	65000 [ms]	2000 [ms]

Description: Sets the monitoring time for the current-offset measurement of the power unit.

The time is started with the normal end of the measurement. If the measurement is invalid and if no valid measurement can be taken within the monitoring period (phase currents too high), an appropriate message is generated.

Note: Set this parameter to 0 to allow variations in the delay when running-up.

p3492 Infeed, line supply undervoltage delay time / INF U_line t_del

A_INF, S_INF, R_INF

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Commands	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0 [s]	300 [s]	0 [s]

Description: Sets the delay time for shutdown due to a line supply undervoltage condition (F06100).

After the line supply undervoltage is detected, the power unit is tripped (shut down) after this delay time has expired.

If, during this delay time, the line supply undervoltage is no longer detected, then the power unit is not shut down.

While the closed-loop control is being synchronized to the line supply (r3402 = 7) the delay time p3492 is not effective.

Dependency: Refer to: p0283

Refer to: F06100

Note: The degree of ruggedness of the infeed with respect to fluctuations in the line supply voltage can be increased by parameterizing this delay value.

However, the following should be noted:

- the infeed power decreases proportionally (linearly) with the line supply voltage.

- when other components are connected, for low line supply voltage, operating faults or damage can occur. In this case, the specifications of the connected electrical components should always be carefully observed.

r3496[0...1] CO: cos phi display actual value / cosphi disp ActVal

A_INF (cos phi), R_INF (cos phi)

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 8951
P-Group: Displays, signals	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** PERCENT	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Display and connector output for offset factor cos phi.

The offset factor cos phi is defined as the cosine of the phase angle between the sinusoidal oscillation of the voltage and of the current of the fundamental frequency.

Index: [0] = Space vector 1
[1] = Space vector 2

Notice: The current and voltage signals must come from the same line supply to which the Active Line Module is connected (identical line frequency).

p3475.2 can be used to compensate if the phase sequence is reversed with respect to the Active Line Module connection terminals.

p3508 Infeed step-up factor maximum / Step-up factor max

A_INF, R_INF

Can be changed: C2(2), T	**Calculated:** -	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Converter	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
1.60	3.00	1.60

Description: Sets the maximum permissible step-up factor for the power unit used in conjunction with the line filter parameterized in p0220[0].

Dependency: Refer to: p0210, p0220, p3510

Note: The maximum step-up factor determines the maximum ratio between the DC link voltage setpoint (p3510) and the unit supply voltage (p0210).

The input of the DC link voltage setpoint (p3510) is limited corresponding to the permissible step-up factor (p3508): p3510 <= p0210 * p3508.

Pre-setting values:

380 ... 480 V booksize units without Active Interface Module: 1.60

380 ... 480 V booksize units with Active Interface Module (p0220 = 41 ... 45): 2.00

380 ... 480 V chassis units: 2.00

500 ... 690 V chassis units: 2.00

Maximum values:

380 ... 480 V booksize units without Active Interface Module: 1.60

380 ... 480 V booksize units with Active Interface Module (p0220 = 41 ... 45): 2.00

380 ... 480 V chassis units: 2.00

500 ... 690 V chassis units: 2.00

When the filter setting (p0220) is changed, then the setting of the maximum step-up factor (p3508) is also automatically adapted.

p3510 Infeed DC link voltage setpoint / INF Vdc setp

SERVO (Tech_ctrl), SERVO_AC (Tech_ctrl), SERVO_I_AC (Tech_ctrl), A_INF, R_INF

Can be changed: U, T	**Calculated:** -	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 8910, 8940
P-Group: Closed-loop control	**Unit group:** 5_2	**Unit selection:** p0505
Not for motor type: -	**Scaling:** p2001	**Expert list:** 1
Min	**Max**	**Factory setting**
100.00 [V]	1600.00 [V]	600.00 [V]

Description: Sets the setpoint for the DC link voltage.

Dependency: Refer to: p0210, p0280, p3400, p3508, p3511

Warning: Before increasing the voltage limit for pulsed operation of a controlled booksize infeed with line supply voltages p0210 > 415 V it should be checked whether the motors connected to the DC link are specified for the higher motor voltages.

The warning information associated with p0210 must be carefully observed.

Note: When the Smart Mode is activated (p3400.0 = 1) the DC link voltage is not regulated, i.e. the value entered here is in this case not effective.

The permissible range of the DC link voltage depends on the parameterized unit supply voltage (p0210) and the permissible, maximum continuous DC link voltage (p0280).

In voltage-controlled operation (p3400.0 = 0) the following applies:

p3510 >= 1.42 * p0210 and

p3510 <= p3508 * p0210 and

p3510 <= p0280.

In the Smart Mode (p3400.0 = 1) the following applies:

The setpoint p3510 for the DC link voltage control is inactive. In order to permit an adapted display, deviating from voltage-controlled operation, the lower limit p3510 is >= 1.2 * p0210.

p3510 DC link voltage setpoint / Vdc setp

VECTOR (Tech_ctrl), VECTOR_AC (Tech_ctrl), VECTOR_I_AC (Tech_ctrl)

Description: Sets the signal source for power precontrol.

Dependency: Refer to: p3521

Note: Closed-loop control of the DC link voltage is improved by precontrolling the power required for the other modules.

A non-scaled quantity is expected so that the various power reference values (r2004) of the drive objects do not have to be taken into account. The scaling factors are used to adapt the scaling (p3521).

Min	**Max**	**Factory setting**
1.00 [Arms]	100000.00 [Arms]	10000.00 [Arms]

Description: Sets the motoring limit for the active line current.

The currently effective current limit is displayed in r0067[0].

Dependency: Refer to: r0067, p3532

Notice: If this limit is selected lower than the maximum current permissible for the power unit (r0067), the infeed can no longer provide its full controlled power. Operating faults of the infeed can occur due to the resulting DC link undervoltage.

For self-commutated infeeds, the DC link voltage decreases if more power is drawn from the DC link by the connected load than can be supplied by the line because of the power unit maximum current or a limit in p3530.

If the DC link voltage decreases down to the rectified value, then the complete current - necessary to cover the required active power - flows, uncontrolled into the rectifier circuit via the diodes.

This is the reason that, for physical reasons, the value in p3530 cannot act as current limit that is always maintained.

The value forms a current threshold from which point onwards the DC link energy is used as buffer for brief power fluctuations.

Note: If Smart Mode is activated (p3400.0 = 1), the setting in this parameter is not active.

p3531 Infeed current limit regenerative / INF I_limit regen

A_INF, R_INF

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 8940

Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-100000.00 [Arms]	-1.00 [Arms]	-10000.00 [Arms]

Description: Sets the limit for the active line supply current when regenerating.

The currently effective current limit is displayed in r0067[1].

Dependency: Refer to: r0067, p3533

Notice: If this limit is selected lower than the maximum current permissible for the power unit (r0067), the infeed can no longer provide its full controlled power. This can result in an overvoltage condition in the DC link.

For self-commutated infeeds, the DC link voltage increases if more power is input to the DC link through the connected source than can be fed to the line because of the maximum power unit current or a limit in p3531

If the DC link voltage exceeds the permissible threshold (p0297), defined by the hardware, then the unit is tripped due to overvoltage.

The value in p3531 represents a current limit that is always maintained - however, this can result in overvoltage conditions in the DC link.

The value in p3531 represents a current limit from which point onwards the capacitance of the DC link can be used as buffer for brief power fluctuations.

Note: If Smart Mode is activated (p3400.0 = 1), the setting in this parameter is not active.

p3532 BI: Infeed inhibit motoring / INF mot mode inhib

A_INF, R_INF			
	Can be changed: T	**Calculated:** -	**Access level:** 3
	Data type: Unsigned32 / Binary	**Dyn. index:** -	**Func. diagram:** 8920
	P-Group: -	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	-	-	0

Description: Sets the signal source for inhibiting the motor mode of the infeed.

Dependency: Refer to: r3405, p3530

Notice: If the motor mode is inhibited although power is withdrawn from the DC link, then the DC link voltage drops to the rectified value.

In this state, the DC link is post-charged through the diodes and motoring power is fed to the power unit in spite of the motoring inhibit.

The parameter may be protected as a result of p0922 or p2079 and cannot be changed.

Note: The inhibit only becomes active after operation has been enabled and the Vdc has been ramped up (r0863.0 = 1).

If Smart Mode is activated (p3400.0 = 1), the setting in this parameter is not active.

p3555[0...5] Infeed Vdc controller integral component fast intervention / Vdc_ctr I-compFast

A_INF, S_INF, R_INF

Can be changed: T	**Calculated:** -	**Access level:** 4
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.00 [%]	200.00 [%]	[0] 2.00 [%] [1] 102.00 [%] [2] 0.00 [%] [3] 5.00 [%] [4] 100.00 [%] [5] 0.00 [%]

Description: Sets the fast Vdc controller intervention for a step-like decrease of the DC link voltage due to a high motor load of the infeed.

The Vdc controller fast intervention is deactivated for p3555[5] = 0 % or p3560 < 100% or p0225 > 0.5 * p0223.

For a line supply and DC link identification (p3410 >= 2) the level of the fast controller intervention (p3555[2]) is automatically adapted to the line supply inductance.

Recommendation: Precise system knowhow is required when correctly changing this parameter!

- generally, the fast controller intervention is used to improve the control behavior for high-speed load changes. The function can therefore always be deactivated with p3555[5] = 0 % if no peak load duty cycles are required in the application.

- using p3555[0], the calculation of the modulation depth is determined in the case of high system deviations also when the controller intervention is deactivated. This is the reason that p3555[0] should generally not be changed.

Index:
[0] = Intervention threshold 1: Vdc deviation from the setpoint
[1] = Intervention threshold 2: Vdc difference to the rectified value
[2] = Fast intervention automatic scaling
[3] = Fast intervention precontrol
[4] = Fast intervention timeout
[5] = Fast intervention manual scaling

Note: p3555[0]:

Vdc system deviation as a percentage of the setpoint of the DC link voltage (first condition to initiate fast controller intervention). The threshold is also used to internally change over the modulation depth calculation for high system deviations and should therefore generally not be changed!

p3555[1]:

Vdc threshold as a percentage of the rectified value of the actual line supply voltage (second condition to initiate the fast controller intervention). Both threshold conditions must be fulfilled to initiate the controller intervention.

p3555[2]:

Percentage overall level of the fast intervention (scaling factor). For a line supply identification with p3410 >= 2, the factor is automatically adapted or, for weak line supplies with a high inductance, set to 0.

p3555[3]:

Percentage correction of the precontrol for a fast voltage dip (dead time compensation).

p3555[4]:

Percentage minimum time between two controller interventions (100% corresponds to 100 ms). If high load change frequencies occur with the application, the minimum time between two controller interventions can be reduced using p3555[4].

p3555[5]:

Percentage overall level of the fast intervention (scaling factor). With p3555[5] = 0, the fast controller intervention is inhibited. For weak line supplies with a high inductance, it makes sense to deactivate the fast intervention.

p3560 Infeed Vdc controller proportional gain / INF Vdc_ctrl Kp

SERVO (Tech_ctrl), SERVO_AC (Tech_ctrl), SERVO_I_AC (Tech_ctrl), A_INF, R_INF

Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
40 [ms]	1000 [ms]	100 [ms]

Description: Sets the ramp time for the DC link voltage (Vdc) when switching on and switching off.

Switching on (pulses enabled, r0898.3 = 1):

During this time, the DC link voltage is increased from the rectifier value after precharging to the voltage setpoint (p3510, p3511). The voltage setpoint is increased, when necessary, so that the modulation depth reserve (p3481) is maintained. The reactive current is set to the value 0 while ramping.

Switching off (inhibit pulses, r0898.3 = 0):

During this time, the DC link voltage is reduced to the rectified value (sqrt(2) * line supply voltage). The reactive current value is set to the value 0 when the ramp starts.

p3570 CI: Master/slave active current setpoint / I_act_setp

A_INF (Master/Slave), R_INF (Master/Slave)

p3610 Infeed reactive current fixed setpoint / INF I_reactv F_set

A_INF, R_INF

Can be changed: U, T	**Calculated:** -	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 8910, 8946
P-Group: Closed-loop control	**Unit group:** 6_2	**Unit selection:** p0505
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-10000.0 [Arms]	10000.0 [Arms]	0.0 [Arms]

Description: Sets the fixed setpoint for the reactive current.

The permissible maximum absolute value for the reactive current is the device rated current r0207.

The following applies: | p3610 | <= r0207

Dependency: Refer to: r0029, r0075, r0076

Notice: If the line phases are reversed and the line voltage therefore has a negative orientation (r0066 < 0), it should be noted that the sign of the reactive current is also reversed. The negated value of p3610 is effective in display parameters r0029, r0075, r0076 as appropriate.

Note: p3610 < 0: Inductive reactive current is produced, i. e. the current follows the voltage.

p3610 > 0: Capacitive reactive current is produced, i. e. the current leads the voltage.

This definition applies to 3AC voltage systems both with positive rotational orientation (r0066 > 0) and for negative rotational orientation (r0066 < 0).

p3611 CI: Infeed reactive current supplementary setpoint / INF I_react Z_set

P-Group: Commands	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.000 [ms]	2.000 [ms]	0.000 [ms]

Description: Sets the time constant for the PT1 filtering of the active current actual value and reactive current actual value.

Index:
[0] = Current actual value smoothing with dead time
[1] = Current actual value smoothing without dead time
[2] = System deviation smoothing without dead time
[3] = Automatic system deviation smoothing

Note: The current actual value filter is deactivated with p3614[0, 1, 2] = 0.

For index [0]:

The PT1 filter with a clock cycle dead time can be used to stabilize the closed-loop current control for extremely weak line supplies (with higher relative short-circuit voltage uk).

For an automatic controller setting with p3410 >= 2, the current actual value filter is automatically pre-set.

For index [1]:

The PT1 filter without dead time can be used to optimize the closed-loop current control (e.g. in conjunction with frequency wobbulation).

For index [2]:

The PT1 filter without dead time for the system deviation (r3606, r3608) can be used to stabilize the closed-current control for weak line supplies (with low line fault rating).

For index [3]:

For an automatic controller setting, the PT1 filter without dead time for the system deviation (r3606, r3608) is preset with p3410 >= 2.

The filter is only active, if the following applies: p3614[2] = 0.

p3615 Infeed current controller P gain / INF I_ctrl Kp

A_INF, R_INF	**Can be changed:** U, T	**Calculated:** -	**Access level:** 2

p3620 Infeed current controller adaptation lower switch-in threshold / INF I_adpt thr low

A_INF, R_INF

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.00 [%]	100.00 [%]	40.00 [%]

Description: Sets the switch-in threshold for the current controller adaptation.

The value refers to the maximum power unit current (r0209).

From the starting threshold onwards, the inductance value (p3421) used for current control is reduced linearly as a function of the current value. The inductance value for the maximum power unit current is therefore p3421 * p3622.

Dependency: Refer to: p3410, p3415, p3622

Note: The parameter can be set automatically using the line supply identification (p3410 = 4, 5) (also refer to p3622).
Prerequisite for a reliable measurement of p3622 is that the current magnitude for run 2 (p3415[1]) is at least 10 % higher than the current magnitude for run 1 of the line supply identification. Otherwise, the measurement result is rejected.

In the case of a correct measurement, p3620 is set to 80% of the current magnitude for run 1 (p3415[0]).

For chassis power units, it is generally not necessary to adapt p3620 and p3622 to the characteristics of the line supply. However, when required, the current controller adaptation can be optimized by selecting suitable current magnitudes for p3415.

For booksize power units, p3620 and p3622 are automatically adapted with the then valid factory setting of the line identification p3415.

p3622 Infeed current controller adaptation reduction factor / INF I_adapt factor

A_INF, R_INF

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.01 [%]	100.00 [%]	85.00 [%]

Description: Sets the inductance of the line reactor at the maximum power unit current (r0209) as a percentage of the inductance (p3421) at the application threshold (p3620).

Dependency: Refer to: p3410, p3415, p3620

Note: The parameter for a line supply identification (p3410 = 4, 5) automatically optimized, if the following applies:

p3415[1] - p3415[0] > 10 %

Otherwise, the measurement result is rejected.

For chassis power units, it is generally not necessary to adapt p3620 and p3622 to the characteristics of the line supply. However, when required, the current controller adaptation can be optimized by selecting suitable current magnitudes for p3415.

For booksize power units, p3620 and p3622 are automatically adapted with the then valid factory setting of the line identification p3415.

p3624[0...1] Infeed harmonics controller order / INF harm_ctr order

A_INF, R_INF			
	Can be changed: T	**Calculated:** -	**Access level:** 2

Description: Sets the Order of the line harmonics for the current harmonics controller.

p3624[0]: Order of the line harmonics for the first harmonics controller.

p3624[1]: Order of the line harmonics for the second harmonics controller.

Dependency: Refer to: p3625, r3626

Note: Harmonics in the line supply voltage can cause harmonics in the converter current. These types of current harmonics can be reduced by activating additional controller modules.

Example:

For a 50 Hz line supply harmonics at 250 Hz in the phase currents can be reduced by activating a harmonic controller with Order 5 (p3624[0] = 5).

p3625[0...1] Infeed harmonics controller scaling / INF harm_ctrl scal

Description: Display and connector output for the angle of the input voltage (relative to the line supply angle).

p3636[0...2] CI: Negative phase-sequence system controller phase current scaling / Neg_sys_ctr ph sc

A_INF (Dyn. grid support), R_INF (Dyn. grid support)

Can be changed: U, T	**Calculated:** -	**Access level:** 4
Data type: Unsigned32 / FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** PERCENT	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0

Description: Sets the signal source for scaling the phase current using the negative phase-sequence system controller.

Setpoints not equal to 0 result in shifting the corresponding phase currents to the two other phases. As a consequence, an identical scaling value for all 3 phases does not result in a change in the current.

Index:
[0] = Phase U
[1] = Phase V
[2] = Phase W

Caution: Unequal scaling values result in an oscillating line power and therefore in voltage fluctuations in the DC link and asymmetrical line supply load.

As a consequence, additional thermal losses occur in the inverter

Further, this can have a negative impact on adjacent systems and components - or even damage them.

Depending on the magnitude of the asymmetry, increased harmonics can occur in the phase currents.

It may be necessary to increase the capacitance in the DC link to reduce the amplitude of the DC link voltage fluctuations.

Notice: The phase current scaling requires the calculation of the line voltage negative-phase sequence system (p5500.3 = 1). Grid support (p5501) can be activated or deactivated.

Internally, the value range of p3636 is limited depending on p3527.

The following applies to the maximum absolute value of the scaling value:

(100 % - p3527) * 2

The complete value range [-1, 1] assumes that p3527 is set <= 50 %. For p3527 = 100 %, p3636 is not effective.

Contrary to entering setpoint pointers (p3641), the phase current scaling becomes active with p3636 after the dynamic grid support has entered a setpoint (p5506, p5509). As a consequence, dynamic grid support is influenced by p3636. Inversely, it also applies that the current change as a result of p3636 is not taken into account in the dynamic grid support, and therefore the dynamic phase-by-phase current limiting must be deactivated (p5500.7 = 0).

Note: The scaling signals are internally limited by the value range [-1, 1].

Example:

p3636[0] = 1 signal (corresponds to 100 %) results in a reduction of the current setpoint in phase U to approximately 0, if the following applies:

p3636[1] = p3636[2] = 0 signal

The current amplitudes of the two other phases V and W are then symmetrically increased by 50 %.

The setpoints r5510[4, 6] and the negative phase-sequence system setpoint pointer calculated using p3636 are added.

r3637[0...3] CO: Negative phase-sequence system controller current setpoint / Neg_seq_ctrl I_set

A_INF (Dyn. grid support, Line transf, Suppl cl-loop ctrl), R_INF (Dyn. grid support, Line transf, Suppl cl-loop ctrl)

[2] = Positive phase-sequence system component active current
[3] = Positive phase-sequence system component reactive current

Note: The total active current actual value in the positive phase-sequence system coordinates is displayed in r0078.

The total reactive current actual value in the positive phase-sequence system coordinates is displayed in r0076.

p3639[0...3] Negative phase-sequence system controller scaling values / Neg_sys_ctrl scal

A_INF (Dyn. grid support, Line transf, Suppl cl-loop ctrl), R_INF (Dyn. grid support, Line transf, Suppl cl-loop ctrl)

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 7987
P-Group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.00 [%]	300.00 [%]	[0] 100.00 [%] [1] 0.10 [%] [2] 200.00 [%] [3] 1.00 [%]

Description: Sets the scaling values for the negative phase-sequence system controller.

Index:
[0] = Integral time
[1] = Integrator feedback coupling
[2] = DC link voltage extrapolation
[3] = DC link voltage filter

Note: For index [0]:

The value 100% corresponds to the integral time, which is active for the regular positive phase-sequence system current controller (p3617).

With p3639[0] = 0, the integral component of the negative phase sequence system controller is deactivated.

For index [1]:

Sets an integrator feedback loop, which, for values greater than 0, results in a PT1 response. In the control, instead of an integrator, a 1st order delay element with time constant [-p0115[0] / ln(1 - p3639[1])] is active. This allows the negative phase-sequence system controller stability range to be extended.

Internally, the setting value is limited to 10 %.

We only recommend that this parameter is changed if stability problems are encountered. Typical setting values are in the range of 1%.

For index [2]:

Sets the extrapolation width for the actual value of the DC link voltage to compensate for Vdc oscillation. A value of 100% corresponds to an extrapolation of one current controller sampling time (p0115[0]).

The extrapolated value is displayed in r3643[1].

For index [3]:

Sets the scaling factor for the Vdc actual value filter.

At twice the line supply frequency, this component of the Vdc oscillation can pass through the bandstop and causes the Vdc controller to respond. As a consequence, the stability of the overall closed-loop control can be improved.

The setting values are internally limited to 100%.

p3640 Negative phase-sequence system controller configuration / Neg_sys ctr config

A_INF (Dyn. grid support, Line transf, Suppl cl-loop ctrl), R_INF (Dyn. grid support, Line transf, Suppl cl-loop ctrl)

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** 7987
P-Group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0000 bin

Description: Sets the configuration for the negative phase-sequence system current controller.

Recommendation: Setting p3640 = 7 is recommended if the emphasis is not on correcting current asymmetry, but on identifying high-ohmic line supply phase failures.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Negative phase-sequence system current controller activated	Yes	No	-
01	Asymmetry monitoring activated	Yes	No	-
02	Output limiting activated	Yes	No	-

Note: For bit 00:

The negative phase-sequence system controller controls negative phase-sequence components in the line current.

For asymmetry in the line supply, this means that current harmonics with 2x the line frequency can be compensated.

For bit 01:

Only active for bit 0 = 1.

For bit 1 = 1, the following applies:

The smoothed amplitude of the controller output is monitored, and when a threshold is exceeded (p3647[1]) an alarm is output (A06208) - and the signal bit for phase failure is set (r3405.2 = 1).

When compared to passive monitoring, this negative phase-sequence system control represents active phase failure detection; even under no load conditions, it can be guaranteed that single-phase, high-ohmic line supply faults are detected.

For bit 02:

Only active for bit 0 = 1.

For bit 2 = 1, the following applies:

In the case of high-ohmic line supply faults (e.g. phase failure), the line asymmetry that occurs can result in a significant increase in the controller integral components, and as a consequence in a fault shutdown (e.g. fault F06200).

If these types of line supply faults are to be ridden through without shutdown (as far as is possible), then the controller output voltage limiting must be activated (threshold p3647[0]).

When monitoring is active (bit 1), for example, after A06208 occurs, a higher-level control system can initially shut down the drives in a controlled fashion - and then switch off the Active Infeed.

p3641[0...1] CI: Negative phase-sequence system controller setpoint pointer / Neg_seq ctrl setp

A_INF (Dyn. grid support, Line transf, Suppl cl-loop ctrl), R_INF (Dyn. grid support, Line transf, Suppl cl-loop ctrl)

Can be changed: T	**Calculated:** -	**Access level:** 4
Data type: Unsigned32 / FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 7987
P-Group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** p2002	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0

Description: Sets the signal source for the setpoint pointer of the negative phase-sequence system current controller.

Index:
[0] = Active
[1] = Reactive

Warning: Setpoints not equal to zero result in an oscillating line power and therefore in voltage fluctuations in the DC link and asymmetrical line supply load.

Note: When the function module "dynamic grid support" (r0108.7 = 1) is activated, the following applies:

The setpoints r5510[4, 6] and the setpoints of the signal source are summed.

---

r3642[0...1] CO: Negative phase-sequence system controller manipulated variable / NegSeqCtr ManipVar

A_INF (Dyn. grid support, Line transf, Suppl cl-loop ctrl), R_INF (Dyn. grid support, Line transf, Suppl cl-loop ctrl)

Min	**Max**	**Factory setting**
- [V]	- [V]	- [V]

Description: Display and connector output for the manipulated variable (output voltage) of the negative phase-sequence system current controller.

The manipulated variable is displayed in alpha/beta coordinates.

Index: [0] = Alpha
[1] = Beta

---

r3643[0...1] Neg phase-sequence system controller DC link voltage correction / NegSeqCtr Vdc corr

A_INF (Dyn. grid support, Line transf, Suppl cl-loop ctrl), R_INF (Dyn. grid support, Line transf, Suppl cl-loop ctrl)

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 7987
P-Group: Displays, signals	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
- [V]	- [V]	- [V]

Description: Displays the correction value for the DC link voltage setpoint.

This value is added to the DC link voltage setpoint (p3510), and in the case of a negative phase-sequence system setpoint not equal to 0, compensates any Vdc oscillation.

Index: [0] = Correction value
[1] = Correction value extrapolated

Note: For index [0]:

The corrected DC link voltage setpoint (r0088) is effective for the voltage controller.

For index [1]:

For Vdc compensation, the extrapolated correction value (also see p3639[2]) is used to take into account the current controller dead times – and to avoid current harmonics in the case of a negative phase-sequence system setpoint other than 0.

---

p3645 Neg phase-seq system controller Vdc actual value filter damping / NegSysCtr FiltDamp

A_INF (Dyn. grid support, Line transf, Suppl cl-loop ctrl), R_INF (Dyn. grid support, Line transf, Suppl cl-loop ctrl)

Not for motor type: -	**Scaling:** p2001	**Expert list:** 1
Min	**Max**	**Factory setting**
- [Vrms]	- [Vrms]	- [Vrms]

Description: Displays the integral components of the negative phase-sequence system controller.

Index:
[0] = Active
[1] = Reactive

p3647[0...2] Negative phase-sequence system controller phase asymmetry / Neg_seq ctrl asym

A_INF (Dyn. grid support, Line transf, Suppl cl-loop ctrl), R_INF (Dyn. grid support, Line transf, Suppl cl-loop ctrl)

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.00 [%]	300.00 [%]	[0] 15.00 [%] [1] 10.00 [%] [2] 50.00 [%]

Description: Sets the threshold limits and monitoring thresholds for the negative phase-sequence system controller.

Index:
[0] = Threshold limit
[1] = Signaling threshold
[2] = Smoothing time

Note: For index [0]:

Sets the limit threshold for the output amplitude of the negative phase-sequence system control.

The value of 100 % corresponds to the smoothed line voltage (r0072[4]).

For p3640.2 = 1, the following applies:

The negative phase-sequence system integral components (r3645) are reduced if the set threshold is exceeded.

For index [1]:

Sets the signaling threshold for the output amplitude of the negative phase-sequence system control.

The negative phase-sequence system output amplitude corresponds to the asymmetry of the line voltage.

The value of 100 % corresponds to the smoothed line voltage (r0072[4]).

The setting value is internally limited to a maximum of 0.9 * p3647[0].

For p3640.1 = 1, the following applies:

A06208 is output and r3405.2 is set = 1 if the set threshold is exceeded. This allows line asymmetry monitoring or phase failure detection to be implemented.

For index [2]:

Sets the smoothing time for identifying the asymmetry described under index 1.

The 100% value corresponds to 1 second.

r3648[0...1] CO: Transformer DC component controller current actual value / Tr DC_ctrl I_act

Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.00 [%]	300.00 [%]	100.00 [%]

Description: Sets the integral time Tn of the DC component controller.

Dependency: Refer to: r3648, p3650, p3651, r3652, p3654

Note: The 100% value corresponds to the standard setting

With p3649 = 0, the integral component of the DC component controller is deactivated.

p3650 Transformer DC component controller proportional gain / Tr DC_ctrl Kp

A_INF (Line transf), R_INF (Line transf)

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 7987
P-Group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.00 [%]	300.00 [%]	0.00 [%]

Description: Sets the proportional gain Kp of the DC component controller.

The DC component control is a very precise control without any remaining system deviation under steady-state operating conditions. It calculates a supplementary voltage for the output voltage of a power unit so that any DC component in the current can be counteracted.

The controller is designed analytically based on a model of the controlled system comprising converter, line filter and transformer.

Dependency: The prerequisite for the "DC component control" function is that the "Line transformer" function module is activated (r0108.4 = 1).

Refer to: r3648, p3649, p3651, r3652, p3654

Note: The 100% value corresponds to the standard setting

The DC component controller is deactivated with p3650 = 0.

p3651 Transformer DC component controller limiting / Tr DC_ctrl lim

A_INF (Line transf), R_INF (Line transf)

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 7987

Min	**Max**	**Factory setting**
0.00 [%]	100000.00 [%]	0.00 [%]

Description: Sets the voltage scaler for the Voltage Sensing Module (VSM).

Note: When the 690 V input is used (X522) without voltage scaler, 0 % should be entered.

When the 100 V input (X521) is used with voltage scaler to measure medium voltages, the dividing (scaling) factor multiplied by 100% should be entered.

Example:

1000 V line supply voltage, voltage scaling, 10:1

--> voltage at the VSM input is 100 V

--> p3660 = 10 * 100 % = 1000 %

r3661[0...n] CO: VSM input line supply voltage u1 - u2 / VSM inp u1-u2

Min	**Max**	**Factory setting**
0	6	0

Description: Sets the temperature sensor for the Voltage Sensing Module (VSM).
The temperature sensor is connected to terminals X520.5 and X520.6 of the VSM.

Value:
0: No sensor
1: PTC
2: KTY84
6: PT1000

p3665[0...n] VSM temperature evaluation sensor type / VSM TempSensorType

A_INF, S_INF, R_INF

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: Integer16	**Dyn. index:** p0140	**Func. diagram:** 9886
P-Group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	6	0

Description: Sets the temperature sensor for the Voltage Sensing Module (VSM).

The temperature sensor is connected to terminals X520.5 and X520.6 of the VSM.

Value:
0: No sensor
1: PTC
2: KTY84
6: PT1000

Notice: If, when connecting AIMs in parallel, the last position of the Article number (MLFB) is different, then the sensor type must be manually set (p3665).

For MLFBs with the last position 1, 5, 7, p3665 should be set = 6.

For MLFBs with the last position 0, 3, p3665 should be set = 2.

Note: The parameter preassignment depends on the set line filter type (p0220).

For chassis power units, the temperature monitoring of the line filter is active (p3665 = 2 or p3665 = 6).

r3666[0...n] CO: VSM temperature actual value / VSM Temp_ActVal

VECTOR, VECTOR_AC, VECTOR_I_AC

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** p0150	**Func. diagram:** 9886
P-Group: Closed-loop control	**Unit group:** 21_1	**Unit selection:** p0505
Not for motor type: -	**Scaling:** p2006	**Expert list:** 1
Min	**Max**	**Factory setting**
- [°C]	- [°C]	- [°C]

Description: Display and connector output for the temperature actual value of a temperature sensor connected to a Voltage Sensing Module (VSM).

Prerequisite:

A KTY/ PT1000 temperature sensor is connected, and correspondingly 3665 is set = 2, 6.

Dependency: Refer to: p3665

Refer to: F34207, A34211

Note: If value r3666 exceeds threshold value p3667 or p3668, then alarm A34211 or fault F34207 is output.

For sensor type PTC (p3665 = 1), the following applies:

- below the nominal response temperature, r3666 = -50°C.

- above the nominal response temperature, r3666 = 250 °C.

r3666 CO: VSM temperature actual value / VSM Temp_ActVal

A_INF, S_INF, R_INF

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 9886

p3676 VSM line filter capacitance alarm threshold / VSMfilt C A_thresh

A_INF, S_INF, R_INF

Can be changed: T	**Calculated:** -	**Access level:** 4
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: -	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.00 [%]	100.00 [%]	0.00 [%]

Description: Sets the alarm threshold for the change of the capacitance of the line filter.

The monitoring of the filter capacitance is deactivated with p3676 = 0.00 %.

Recommendation: Set the value >= 20 % and dependent on the harmonic content of the line supply.

Dependency: Refer to: p3670

Refer to: A06250

Notice: The following must be ensured before activating monitoring (e.g. p3676 = 20 %):

Measured filter capacitance (r3677[0...2]) = 3 x filter capacitance (p0221)

Otherwise, to establish this ratio, p3670 must be appropriately set.

Example:

The filter capacitance is specified with p0221 = 39 µF.

In order that the measured capacitance is 3x so high, p3670 = 6.7 A must be set in the gain factor.

p0221[0] = 39 µF

r3677[0...2] = 3 x 39 = 117 µF

--> p3670 = 6.7 A

Note: Prerequisites for monitoring the filter capacitance:

The phase currents must be measured at two capacitors of the line filter. To do this, current transformers should be connected at the 10 V inputs of the Voltage Sensing Module (VSM).

r3677[0...2] CO: VSM line filter capacitance / VSM filt C

A_INF, S_INF, R_INF

Can be changed: -	**Calculated:** -	**Access level:** 4

Min	**Max**	**Factory setting**
0.00 [%]	10000.00 [%]	[0] 0.00 [%] [1] 0.00 [%]

Description: Sets the threshold values for filter monitoring.

The voltage threshold value is referred to p0210.

The current threshold value is referred to the nominal filter current.

Nominal filter current = 2 x PI x p0211 x 3 x p0221[0] x p0210 x sqrt(2) / sqrt(3)

Index: [0] = Voltage threshold value
[1] = Current threshold value

Dependency: Refer to: r3671, r3672, r7310, r7311

Refer to: F06855

Note: The filter monitoring function is deactivated with p3678 = 0.00.

Recommended setting for activation:

Voltage threshold value: 5.0 %

Current threshold value: 500 %

p3679[0...1] Transformer filter monitoring times / Filter monit times

A_INF (Line transf), R_INF (Line transf)

Can be changed: C2(1, 2)	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 7991

Min	**Max**	**Factory setting**
0.00 [ms]	40.00 [ms]	[0] 20.00 [ms] [1] 0.50 [ms]

Description: Sets the times for filter monitoring.

For index [0]:

Smoothing time for the alpha and beta components of the filter voltage.

For index [1]:

An appropriate fault is output if the set current threshold value is exceeded for at least the set time.

Index: [0] = Voltage threshold value
[1] = Current threshold value

Dependency: Refer to: F06855

p3680 BI: Braking Module internal inhibit / BM int inhib

B_INF

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32 / Binary	**Dyn. index:** -	**Func. diagram:** -
P-Group: -	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0

Description: Sets the signal source to inhibit the internal Braking Module.

BI: p3680 = 1 signal:

The Braking Module is inhibited.

BI: p3680 = 0 signal:

The Braking Module is enabled.

Dependency: Refer to: A06904

Caution: When the Braking Module is inhibited, no energy can be dissipated in the braking resistor.

p3681 BI: Activating Braking Module internal DC link fast discharge / BM intDCdischg act

B_INF			
	Can be changed: T	**Calculated:** -	**Access level:** 3
	Data type: Unsigned32 / Binary	**Dyn. index:** -	**Func. diagram:** -
	P-Group: -	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	-	-	0

Description: Sets the signal source to activate the DC link fast discharge for an internal braking module.

When the following conditions apply, the DC link fast discharge is started later with delay time (p3682):

- BI: p3681 = 1 signal.
- an external line contactor is opened via r0863.1 "energize contactor".

The DC link fast discharge is interrupted when the following conditions apply:

- BI: p3681 = 0 signal.
- ON command for the infeed.

Recommendation: The DC link fast discharge should be activated if there is an external line contactor and is correctly interconnected (r0863.1, p0860). If the DC link fast discharge is not activated together with an external line contactor, then faults can occur when precharging (e.g. F30027).

Dependency: Refer to: p3682

Refer to: F30027

Notice: The parameter is only effective for Basic Line Modules with the internal Braking Module (this is valid for Basic Line Modules with a power rating of less than 100 kW).

p3682 Braking Module internal DC link fast discharge delay time / BM int DC dischg t

B_INF

Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays an Uce fault in the internal Braking Module.

1 signal:

An Uce fault is present in the internal Braking Module.

Dependency: Refer to: F06909

p3700 AVS/APC configuration / APC config

SERVO (APC), SERVO_AC (APC), SERVO_I_AC (APC)

Can be changed: U, T	**Calculated:** -	**Access level:** 2
Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** 7012
P-Group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0000 0000 0000 0000 bin

Description: Sets the configuration for AVS and APC.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Activating APC	Yes	No	-
01	APC acceleration sensor	Yes	No	-
02	APC without sensor on the load side	Yes	No	-
03	Take into account acceleration precontrol	Yes	No	-
04	APC also acts on the I component	Yes	No	-
08	Activating pulse de-coupling/speed weighting	Yes	No	-
09	APC speed actual value via BICO input	Yes	No	-

Note: APC: Advanced Positioning Control

AVS: Active Vibration Suppression

For bit 00:

When the bit is set, the acceleration filter output is added to the speed setpoint.

When the bit is not set, a value of 0 is entered. This must be used to evaluate the filter frequency characteristics.

For bit 01:

When the bit is set, the source of p3750 with high pass filtering is used as the APC acceleration actual value.

When the bit is not set, the encoder actual value selected with p3701 is used as APC actual value.

For bit 02:

When the bit is set, a model value without sensor on the load side is used as APC actual value. In so doing, PT1 filtering with p3709 as smoothing time - and a high pass filter with p3751 as a high pass filter time constant apply.

When the bit is not set, the encoder actual value selected with p3701 is used as APC actual value.

For bit 03:

When the bit is set, when calculating the acceleration, the speed precontrol value in p1432[1] is taken into account.

For bit 04:

When the bit is set, the acceleration filter output also acts on the I component of the speed controller.

For bit 08:

For bit 0 = 1 and bit 8 = 1 (pulse decoupling/speed weighting activated), the speed from the direct measuring system (p3701) selected for APC, weighted with p3702, and the motor speed is used as actual value for the speed controller.

For bit 09:

When the bit is set, instead of the selected encoder actual value, the source of p3749 weighted with p3748 is used.

When the bit is not set, the encoder actual value selected with p3701 is used as APC actual value.

p3701 APC encoder selection / APC enc sel

SERVO (APC), SERVO_AC (APC), SERVO_I_AC (APC)

Can be changed: C1(4), C2(15)	**Calculated:** -	**Access level:** 3
Data type: Integer16	**Dyn. index:** -	**Func. diagram:** -
P-Group: Data sets	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
2	3	2

Description: Sets the number of the encoder used for for APC (Advanced Positioning Control).

Value:
2: Encoder 2
3: Encoder 3

Note: Encoder 1 is the motor encoder and cannot be used for APC as APC requires a load measuring system.

An encoder used for APC is, regarding its fault messages, treated just like a motor encoder - this means that its fault messages are assigned to the drive.

p3702[0...n] APC load speed/motor speed weighting / APC n_load/mot wt

SERVO (APC), SERVO_AC (APC), SERVO_I_AC (APC)

Dependency: This parameter is active for the following filter type:
- general 2nd order filter (p3705.13 = 1).

Refer to: p3704, p3705

Note: APC: Advanced Positioning Control

p3747[0...n] APC torque setpoint filter 2 numerator damping / APC M filt 2 D_num

SERVO (APC), SERVO_AC (APC), SERVO_I_AC (APC)

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 5060
P-Group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.000	10.000	0.700

Description: Sets the numerator damping for torque setpoint filter 2 for APC.

Dependency: This parameter is active for the following filter type:
- general 2nd order filter (p3705.13 = 1).

Refer to: p3704, p3705

Note: APC: Advanced Positioning Control

p3748[0...n] APC velocity input scaling / APC v_input scale

SERVO (APC), SERVO_AC (APC), SERVO_I_AC (APC)

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 7012
P-Group: Setpoints	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-1000000.000	1000000.000	1.000

Description: Sets the scaling to adapt the velocity value via a connector input p3749.

Dependency: Refer to: p3749

Note: APC: Advanced Positioning Control

p3749[0...n] CI: APC velocity actual value external input / APC v_act ext inp

SERVO (APC), SERVO_AC (APC), SERVO_I_AC (APC)

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32 / FloatingPoint32	**Dyn. index:** CDS, p0170	**Func. diagram:** 7012
P-Group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: REL	**Scaling:** p2000	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0

Description: Sets the signal source for the actual value of the external velocity actual value for APC.

Recommendation: When interconnecting a speed actual value from another axis, it is recommended to evaluate the bit "Speed information available" (r1992.11) (e.g. interconnect to an external fault p2106 - p2108).

To avoid additional dead time as a result of the calculation sequence, it is recommended to set the drive object associated with the signal source of p3749 to a higher priority (p7900).

Dependency: Refer to: p3748

Note: APC: Advanced Positioning Control

p3750[0...n] CI: APC acceleration sensor input / APC accel input

SERVO (APC), SERVO_AC (APC), SERVO_I_AC (APC)

Can be changed: T	**Calculated:** -	**Access level:** 2
Data type: Unsigned32 / FloatingPoint32	**Dyn. index:** CDS, p0170	**Func. diagram:** 7012
P-Group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: REL	**Scaling:** p2007	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0

Description: Sets the signal source for the actual value of the acceleration sensor for APC (Advanced Positioning Control).

Dependency: Refer to: p3700

p3751[0...n] AVS/APC acceleration sensor high pass time constant / APC accel DT1 T

SERVO (APC), SERVO_AC (APC), SERVO_I_AC (APC)

Can be changed: U, T	**Calculated:** CALC_MOD_CON	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 7012
P-Group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.00 [ms]	10000.00 [ms]	100.00 [ms]

Description: Sets the time constant of the high-pass filter for the acceleration sensor for AVS and APC.

Dependency: Refer to: p3700, p3750

Note: APC: Advanced Positioning Control

AVS: Active Vibration Suppression

p3752[0...n] AVS controller preassignment natural oscillation frequency / AVS ctr_preassn fn

SERVO (APC), SERVO_AC (APC), SERVO_I_AC (APC)

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** -
P-Group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.0 [Hz]	1000.0 [Hz]	0.0 [Hz]

Description: Sets the natural oscillation frequency for preassignment of the AVS controller data (p3709, p3751, p3761).

The value is only effective for operation without an encoder on the load side (p3700.2 = 1).

The preassignment is started when writing p3752 > 0 (if p3700.2 = 1).

Dependency: Refer to: p3700, p3709, p3751, p3761

Note: The load moment of inertia is used for the calculation. Parameters p0342 and p1498 should be checked, and if required, corrected before the calculation.

p3753[0...n] APC torque setpoint preassignment natural oscillation frequency / APC M_filt def fn

SERVO (APC), SERVO_AC (APC), SERVO_I_AC (APC)

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 5060
P-Group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.0 [Hz]	1000.0 [Hz]	0.0 [Hz]

Description: Sets the natural oscillation frequency for pre-assigning the APC torque setpoint filter 1 to compensate mounting-related vibration.

The following parameters are preassigned:

p3740, p3741, p3742, p3743

Dependency: Refer to: p3740, p3741, p3742, p3743

Note: The procedure to preassign the filter is started with p3754 > 0.

p3754[0...n] APC torque setpoint filter preassignment gain / APC M_filt def V

SERVO (APC), SERVO_AC (APC), SERVO_I_AC (APC)

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 5060
P-Group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.0	2.0	0.0

Description: Sets the gain for pre-assigning the APC torque setpoint filter 1 to compensate mounting-related vibration.

The following parameters are preassigned:

p3740, p3741, p3742, p3743

Dependency: Refer to: p3740, p3741, p3742, p3743

Note: The procedure to preassign the filter is started with p3754 > 0.

p3755[0...n] AVS/APC motor mass factor / APC mot_mass fact

SERVO (APC, Lin), SERVO_AC (APC, Lin), SERVO_I_AC (APC, Lin)

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** -
P-Group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.25	500.00	1.00

Description: Sets the factor for the weight stiffly attached to the motor for APC without sensor on the load side (p3700.2).

The value is referred to the motor weight (p0341)

Dependency: Refer to: p3700

Note: If the setting results in more than the total mass, then the value of p3755 is automatically limited to this. This can also be realized by changing p1498, p0341 and p0342.

p3755[0...n] AVS/APC motor moment of inertia factor / APC M_inert factor

SERVO (APC), SERVO_AC (APC), SERVO_I_AC (APC)

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** -
P-Group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.25	500.00	1.00

Description: Sets the factor for the moment of inertia stiffly attached to the motor for APC without sensor on the load side (p3700.2).

The value is referred to the motor moment of inertia (p0341).

Dependency: Refer to: p3700

Note: If the setting results in more than the total moment of inertia, then the value of p3755 is automatically limited to this. This can also be realized by changing p1498, p0341 and p0342.

p3760[0...n] APC load velocity controller 1 P gain / APC v_load ctr1 Kp

SERVO (APC, Lin), SERVO_AC (APC, Lin), SERVO_I_AC (APC, Lin)

0 [ms]	1000000 [ms]	0 [ms]

Description: Sets the monitoring time to limit the output for APC (Advanced Positioning Control).

This monitoring time is started after the selected limit value (p3778) has been exceeded. A corresponding fault is output if the limit value is not undershot before this time expires.

Dependency: Refer to: p3778

Refer to: F07425

p3800[0...n] Sync-line-drive activation / Sync act

VECTOR, VECTOR_AC, VECTOR_I_AC

Can be changed: T	**Calculated:** -	**Access level:** 2
Data type: Integer16	**Dyn. index:** DDS, p0180	**Func. diagram:** 7020
P-Group: Functions	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	1	0

Description: Sets the activation for line-drive synchronization

Value:
0: Sync-line-drive deactivated
1: Sync-line-drive activated VSM-INT

Dependency: Refer to: p3801, p3802

Caution: If there is only one VSM being used, this can either be used for line synchronization or for a flying restart. If the VSM was connected to the line supply, then flying restart should be deselected in p1200. If the VSM was connected at the output (motor side), then line synchronization should be deactivated using p3800.

Line synchronization (first VSM connected with the line supply) and also flying restart (second VSM connected to the motor terminals) can only be used if two VSMs are assigned to the Motor Module.

Note: When the ground fault monitoring initiates a fault for overlapping synchronizing the threshold value p0287[1] for the Motor Module and the associated infeed must be appropriately increased (e.g. p0287[1] = 100 %).

For p3800 = 1, the following applies:

The INTERNAL voltage actual values are used for synchronization. The effects that a (sine-wave) filter - that is connected between the Motor Module and motor - has on the voltage actual values are taken into account (theoretically) by appropriately selecting p0230.

VSM: Voltage Sensing Module

p3801[0...n] Sync-line-drive drive object number / Sync DO_no

VECTOR, VECTOR_AC, VECTOR_I_AC

Can be changed: T	**Calculated:** -	**Access level:** 2
Data type: Unsigned16	**Dyn. index:** DDS, p0180	**Func. diagram:** 7020
P-Group: Functions	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
1	62	1

Description: Sets the drive object number of the VSM used for the line-drive synchronization.

Dependency: Refer to: p3800, p3802

Notice: The current controller sampling time p0115[0] of the drive object with the VSM used for synchronization must be identical to the current controller sampling time of the drive of the drive used to perform line synchronization.

Note: VSM: Voltage Sensing Module

The setting p3801 = 1 is always possible (no VSM selected).

If the VSM is assigned subsequently to a Motor Module, its drive object number must be entered in p3801.

The line voltage is always measured using the first VSM (p0151[0]).

p3802[0...n] BI: Sync-line-drive enable / Sync enable

VECTOR, VECTOR_AC, VECTOR_I_AC

Can be changed: T	**Calculated:** -	**Access level:** 2
Data type: Unsigned32 / Binary	**Dyn. index:** CDS, p0170	**Func. diagram:** 7020
P-Group: Functions	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0

Description: Sets the signal source to switch in/switch out for the line-drive synchronization.

BI: p3802 = 1 signal:

The line-drive synchronization is switched in.

Dependency: Refer to: p3800, p3801

r3803.0 CO/BO: Sync-line-drive control word / Sync STW

VECTOR, VECTOR_AC, VECTOR_I_AC

Can be changed: -	**Calculated:** -	**Access level:** 2
Data type: Unsigned32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Functions	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the control word for the line-drive synchronization.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Sync-line-drive selected	Yes	No	-

Note: For bit 00:

For a 1 signal, p3800 > 0 is set.

r3804 CO: Sync-line-drive target frequency / Sync f_target

VECTOR, VECTOR_AC, VECTOR_I_AC

Can be changed: -	**Calculated:** -	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 3030, 7020
P-Group: Functions	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** p2000	**Expert list:** 1
Min	**Max**	**Factory setting**
- [Hz]	- [Hz]	- [Hz]

Description: Displays the target frequency for the line-drive synchronization.

The target frequency corresponds to the absolute value of the line frequency.

Dependency: Refer to: A07941

r3805 CO: Sync-line-drive frequency difference / Sync f_diff

VECTOR, VECTOR_AC, VECTOR_I_AC

Can be changed: -	**Calculated:** -	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 7020
P-Group: Functions	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** p2000	**Expert list:** 1
Min	**Max**	**Factory setting**
- [Hz]	- [Hz]	- [Hz]

Description: Displays the frequency difference between the measured target frequency and output frequency of the gating unit of the closed-loop control for line-drive synchronization.

p3806[0...n] Sync-line-drive frequency difference threshold value / Sync f_diff thresh

VECTOR, VECTOR_AC, VECTOR_I_AC

Can be changed: U, T	**Calculated:** CALC_MOD_LIM_REF	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 7020
P-Group: Functions	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.00 [Hz]	1.00 [Hz]	0.10 [Hz]

Description: Sets the threshold value of the frequency difference to activate the closed-loop phase control for line-drive synchronization.

The closed-loop phase control is activated (r3819.6 = 1), if the frequency difference is less that the threshold value.

r3808 CO: Sync-line-drive phase difference / Sync phase diff

VECTOR, VECTOR_AC, VECTOR_I_AC

Can be changed: -	**Calculated:** -	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 7020
P-Group: Functions	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** p2005	**Expert list:** 1
Min	**Max**	**Factory setting**
- [°]	- [°]	- [°]

Description: Displays the phase difference between the measured target phase and phase of the gating unit of the closed-loop control for line-drive synchronization.

p3809[0...n] Sync-line-drive phase setpoint / Sync phase setp

VECTOR, VECTOR_AC, VECTOR_I_AC

Can be changed: U, T	**Calculated:** -	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 7020
P-Group: Functions	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-180.00 [°]	179.90 [°]	0.00 [°]

Description: Sets the phase setpoint for the line-drive synchronization.

p3811[0...n] Sync-line-drive frequency limiting / Sync f_lim

VECTOR, VECTOR_AC, VECTOR_I_AC

Can be changed: U, T	**Calculated:** -	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 7020
P-Group: Functions	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.00 [Hz]	1.00 [Hz]	0.20 [Hz]

Description: Sets the frequency limiting of the phase controller output for the line-drive synchronization.

r3812 CO: Sync-line-drive correction frequency / Sync f_corr

VECTOR, VECTOR_AC, VECTOR_I_AC

Can be changed: -	**Calculated:** -	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 3080, 7020
P-Group: Functions	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** p2000	**Expert list:** 1
Min	**Max**	**Factory setting**
- [Hz]	- [Hz]	- [Hz]

Description: Displays the correction frequency for the line-drive synchronization.

p3813[0...n] Sync-line-drive phase synchronism threshold value / Sync Ph_sync thrsh

VECTOR, VECTOR_AC, VECTOR_I_AC

Can be changed: U, T	**Calculated:** -	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 7020
P-Group: Functions	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
1.00 [°]	20.00 [°]	2.00 [°]

Description: Sets the threshold value of the phase synchronism for the line-drive synchronization.

A prerequisite for synchronism is achieved if the phase difference is lower than the threshold value.

Note: Synchronism is reached (r3819.2 = 1), if the AND logic operation of the results from the phase measurement (p3813) and voltage measurement (p3815) is fulfilled.

r3814 CO: Sync-line-drive voltage difference / Sync U_diff

VECTOR, VECTOR_AC, VECTOR_I_AC

Can be changed: -	**Calculated:** -	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 7020
P-Group: Functions	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** p2001	**Expert list:** 1
Min	**Max**	**Factory setting**
- [Vrms]	- [Vrms]	- [Vrms]

Description: Display and connector output for the voltage difference between the measured target voltage and output voltage of the gating unit of the closed-loop control for line-drive synchronization.

p3815[0...n] Sync-line-drive voltage difference threshold value / Sync U_diff thresh

VECTOR, VECTOR_AC, VECTOR_I_AC

Can be changed: U, T	**Calculated:** CALC_MOD_LIM_REF	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 7020
P-Group: Functions	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.00 [%]	20.00 [%]	10.00 [%]

Description: Sets the threshold value of the voltage difference for the line-drive synchronization.

A prerequisite for synchronism is reached if the voltage difference is less than the threshold value.

Note: Synchronism is reached (r3819.2 = 1), if the AND logic operation of the results from the phase measurement (p3813) and voltage measurement (p3815) is fulfilled.

For voltage manipulated quantity margin (reserve) of the drive converter, the amplitude difference (r3814) between the setpoint and actual value is controlled (corrected) to zero.

r3819.0...7 CO/BO: Sync-line-drive status word / Sync ZSW

VECTOR, VECTOR_AC, VECTOR_I_AC

Can be changed: -	**Calculated:** -	**Access level:** 2
Data type: Unsigned32	**Dyn. index:** -	**Func. diagram:** 7020
P-Group: Functions	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the status word for the line-drive synchronization.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Sync-line-drive enabled	Yes	No	-
02	Sync-line-drive synchronism reached	Yes	No	-
03	Sync-line-drive synchronizing error	Yes	No	-
05	Sync-line-drive frequency measurement active	Yes	No	-
06	Sync-line-drive phase control active	Yes	No	-
07	Sync-line-drive without drive	Yes	No	-

p3820[0...n] Friction characteristic value n0 / Friction n0

SERVO, VECTOR (n/M), SERVO_AC, VECTOR_AC (n/M), SERVO_I_AC, VECTOR_I_AC (n/M)

Can be changed: T	**Calculated:** CALC_MOD_LIM_REF	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 7010
P-Group: Functions	**Unit group:** 3_1	**Unit selection:** p0505
Not for motor type: REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.00 [rpm]	210000.00 [rpm]	15.00 [rpm]

Description: The friction characteristic is defined by 10 value pairs.

This parameter specifies the n coordinate of the 1st value pair of the friction characteristic.

Dependency: Refer to: p3830, p3845

p3820[0...n] Friction characteristic value v0 / Friction v0

SERVO (Lin), SERVO_AC (Lin), SERVO_I_AC (Lin)

Can be changed: T	**Calculated:** CALC_MOD_LIM_REF	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 7010
P-Group: Functions	**Unit group:** 4_1	**Unit selection:** p0505
Not for motor type: REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.00 [m/min]	21000.00 [m/min]	1.50 [m/min]

Description: The friction characteristic is defined by 10 value pairs.
This parameter specifies the v coordinate of the 1st value pair of the friction characteristic.

Dependency: Refer to: p3830, p3845

p3821[0...n] Friction characteristic value n1 / Friction n1

SERVO, VECTOR (n/M), SERVO_AC, VECTOR_AC (n/M), SERVO_I_AC, VECTOR_I_AC (n/M)

Can be changed: T	**Calculated:** CALC_MOD_LIM_REF	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 7010
P-Group: Functions	**Unit group:** 3_1	**Unit selection:** p0505
Not for motor type: REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.00 [rpm]	210000.00 [rpm]	30.00 [rpm]

Description: The friction characteristic is defined by 10 value pairs.
This parameter specifies the n coordinate of the 2nd value pair of the friction characteristic.

Dependency: Refer to: p3831, p3845

p3821[0...n] Friction characteristic value v1 / Friction v1

SERVO (Lin), SERVO_AC (Lin), SERVO_I_AC (Lin)

Can be changed: T	**Calculated:** CALC_MOD_LIM_REF	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 7010
P-Group: Functions	**Unit group:** 4_1	**Unit selection:** p0505
Not for motor type: REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.00 [m/min]	21000.00 [m/min]	3.00 [m/min]

Description: The friction characteristic is defined by 10 value pairs.
This parameter specifies the v coordinate of the 2nd value pair of the friction characteristic.

Dependency: Refer to: p3831, p3845

p3822[0...n] Friction characteristic value n2 / Friction n2

SERVO, VECTOR (n/M), SERVO_AC, VECTOR_AC (n/M), SERVO_I_AC, VECTOR_I_AC (n/M)

Can be changed: T	**Calculated:** CALC_MOD_LIM_REF	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 7010
P-Group: Functions	**Unit group:** 3_1	**Unit selection:** p0505
Not for motor type: REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.00 [rpm]	210000.00 [rpm]	60.00 [rpm]

Description: The friction characteristic is defined by 10 value pairs.
This parameter specifies the n coordinate of the 3rd value pair of the friction characteristic.

Dependency: Refer to: p3832, p3845

p3822[0...n] Friction characteristic value v2 / Friction v2

SERVO (Lin), SERVO_AC (Lin), SERVO_I_AC (Lin)

Can be changed: T	**Calculated:** CALC_MOD_LIM_REF	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 7010
P-Group: Functions	**Unit group:** 4_1	**Unit selection:** p0505
Not for motor type: REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.00 [m/min]	21000.00 [m/min]	6.00 [m/min]

Description: The friction characteristic is defined by 10 value pairs.
This parameter specifies the v coordinate of the 3rd value pair of the friction characteristic.

Dependency: Refer to: p3832, p3845

p3823[0...n] Friction characteristic value n3 / Friction n3

SERVO, VECTOR (n/M), SERVO_AC, VECTOR_AC (n/M), SERVO_I_AC, VECTOR_I_AC (n/M)

Can be changed: T	**Calculated:** CALC_MOD_LIM_REF	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 7010
P-Group: Functions	**Unit group:** 3_1	**Unit selection:** p0505
Not for motor type: REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.00 [rpm]	210000.00 [rpm]	120.00 [rpm]

Description: The friction characteristic is defined by 10 value pairs.
This parameter specifies the n coordinate of the 4th value pair of the friction characteristic.

Dependency: Refer to: p3833, p3845

p3823[0...n] Friction characteristic value v3 / Friction v3

SERVO (Lin), SERVO_AC (Lin), SERVO_I_AC (Lin)

Can be changed: T	**Calculated:** CALC_MOD_LIM_REF	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** 7010
P-Group: Functions	**Unit group:** 4_1	**Unit selection:** p0505
Not for motor type: REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.00 [m/min]	21000.00 [m/min]	12.00 [m/min]

Description: The friction characteristic is defined by 10 value pairs.
This parameter specifies the v coordinate of the 4th value pair of the friction characteristic.

Dependency: Refer to: p3833, p3845

p3824[0...n] Friction characteristic value n4 / Friction n4

SERVO, VECTOR (n/M), SERVO_AC, VECTOR_AC (n/M), SERVO_I_AC, VECTOR_I_AC (n/M)

Can be changed: T	**Calculated:** CALC_MOD_LIM_REF	**Access level:** 2

P-Group: Functions	**Unit group:** -	**Unit selection:** -
Not for motor type: REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Display and BICO output for the status word of the friction characteristic.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Friction characteristic OK	Yes	No	-
01	Friction characteristic record activated	Yes	No	-
02	Friction characteristic record completed	Yes	No	-
03	Friction characteristic record aborted	Yes	No	-
08	Friction characteristic positive direction	Yes	No	-
09	Friction torque model controlled status	Upper	Lower	-

Note: For bit 09:

For closed-control of an induction motors with encoder, the switchover between the current and observer model is displayed (see also r1751.19), if p3844 is > 0.

For bit 9 = 0 (observer model active), the following applies:

The frictional torque is calculated from the characteristic values from the characteristic point entered into p3844.

For bit 9 = 1 (current model active), the following applies:

The frictional torque is calculated from the characteristic values below the characteristic point entered into p3844.

r3841 CO: Friction characteristic output / Frict outp

Not for motor type: PMSM, SESM, REL, RESM	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	4	0

Description: Selects the upper changeover point of the friction characteristic for the frictional torque input controlled by the motor model of the induction motor.

The speed of this changeover point is pre-assigned when automatically calculating with the changeover speed p1752. The changeover point located below is pre-assigned with the changeover speed p1752 * (1 - p1753).

Example:

p3844 = 3 means that the speed value for the change to the monitor model (p3823 = p1752) is entered into p3823 (friction characteristic value n3).

Depending on the display of r3840.9, the frictional torque is calculated from the friction characteristic values, which are associated with these changeover points. For the changeover of the motor model, with hysteresis, the frictional torque smoothed with p3843 changes between these two states.

Dependency: As part of the automatic calculation (p0340), p3844 is only activated for closed loop control (p1300 = 21, 23) of induction motors with encoder.

Refer to: p3843

Notice: If the changeover point defined using p3844 does not match the changeover speed p1752, then internally, the model-controlled friction torque input is automatically deactivated (same as for p3844 = 0).

Note: For p3844 = 0, the model-controlled frictional torque changeover is deactivated. The frictional torque is then calculated the same as for the encoderless control by interpolating between the points along the friction characteristic.

p3845 Friction characteristic record activation / Frict rec act

SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC			
	Can be changed: T	**Calculated:** -	**Access level:** 2
	Data type: Integer16	**Dyn. index:** -	**Func. diagram:** 7010
	P-Group: Functions	**Unit group:** -	**Unit selection:** -
	Not for motor type: REL	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0	3	0

Description: Setting for the friction characteristic record.

After the next switch-on command, the friction characteristic is automatically recorded.

Value:
0: Friction characteristic record deactivated
1: Friction char record activated for all directions
2: Friction char record activated for positive direction
3: Friction char record activated for negative direction

Dependency: When selecting the friction characteristic measurement, the drive data set changeover is suppressed.

For linear drives (refer to r0108.12) it is not permissible to carry out the friction characteristic measurement for mechanical systems that limit travel.

Danger: For drives with a mechanical system that limit the distance moved, it must be ensured that during recording, the friction characteristic is not reached. If this is not the case, then it is not permissible that the measurement is carried out.

Notice: To permanently accept the determined settings they must be saved in a non-volatile fashion (p0971, p0977).

Note: When the friction characteristic record is active, it is not possible to save the parameters (p0971, p0977).

When the friction characteristic record is active (p3845 > 0), it is not possible to change p3820 ... p3829, p3830 ... p3839 and p3842.

When recording the friction characteristic, in addition to the friction, the motor losses are also determined (e.g. iron losses, eddy current losses and re-magnetizing losses). A differentiation is not made between these individual loss components. We recommend that a motor temperature sensor is used because torque deviations can also be emulated/mapped on the characteristic due to the thermal influence.

p3846[0...n] Friction characteristic record ramp-up/ramp-down time / Frict rec t_RU/RD

SERVO, VECTOR (n/M), SERVO_AC, VECTOR_AC (n/M), SERVO_I_AC, VECTOR_I_AC (n/M)

Not for motor type: REL	**Scaling:** p2000	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	63[0]

Description: Sets the signal source for the speed actual value of the friction characteristic.

Dependency: Refer to: r1443

Notice: The interconnected signal of the speed actual value must be approximately the same as the real motor speed so that when the motor model is replaced, no significant settling operations occur.

p3860 Number of Braking Modules connected in parallel / BM qty par_cct

A_INF (Brk Mod ext), S_INF (Brk Mod ext), R_INF (Brk Mod ext), B_INF (Brk Mod ext)

Can be changed: C2(2)	**Calculated:** -	**Access level:** 3
Data type: Unsigned8	**Dyn. index:** -	**Func. diagram:** 9951
P-Group: Converter	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
1	8	1

Description: Sets the number of Braking Modules connected in parallel in a DC link.

Note: The parameter can only be written to if the infeed is in the commissioning mode (p0010 = 2).

r3861.0...7 BO: Braking Module inhibit/acknowledgment / BM inhib/ackn

A_INF (Brk Mod ext), S_INF (Brk Mod ext), R_INF (Brk Mod ext), B_INF (Brk Mod ext)

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** -	**Func. diagram:** 9951
P-Group: Commands	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Signal to energize terminal X21.1 "inhibit/acknowledgment" on the Braking Module.

This binector output is used as signal source to interconnect to a digital output.

For "booksize" formats the digital output must be connected to terminal X21.1 and for "chassis" formats the digital output must be connected to terminal X21.3 of the particular Braking Module.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Inhibit/acknowledge Braking Module 1	High	Low	-
01	Inhibit/acknowledge Braking Module 2	High	Low	-
02	Inhibit/acknowledge Braking Module 3	High	Low	-
03	Inhibit/acknowledge Braking Module 4	High	Low	-
04	Inhibit/acknowledge Braking Module 5	High	Low	-
05	Inhibit/acknowledge Braking Module 6	High	Low	-
06	Inhibit/acknowledge Braking Module 7	High	Low	-
07	Inhibit/acknowledge Braking Module 8	High	Low	-

Warning: Check that binector outputs BO: r3861.n are connected correctly and that the appropriate digital outputs are wired correctly.

If the interconnection/wiring is incorrect, the software could execute a different (incorrect) function via binector outputs BO: r3861.n if the Braking Module develops a fault.

p3862 Braking Module DC link fast discharge delay time / BM DC-dischg t_del

A_INF (Brk Mod ext), S_INF (Brk Mod ext), R_INF (Brk Mod ext), B_INF (Brk Mod ext)

Can be changed: C1(3), T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** -	**Func. diagram:** 9951
P-Group: Communications	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
500 [ms]	4294967295 [ms]	1000 [ms]

Description: Sets the delay time for switching in the DC link fast discharge.

Dependency: Refer to: p3863, r3864

Note: The DC link fast discharge is only possible for "booksize" formats. This function is not supported for "chassis" formats.

p3863 BI: Activating Braking Module DC link fast discharge / BM DC-dischg act

A_INF (Brk Mod ext), S_INF (Brk Mod ext), R_INF (Brk Mod ext), B_INF (Brk Mod ext)

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32 / Binary	**Dyn. index:** -	**Func. diagram:** 9951
P-Group: -	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0

Description: Sets the signal source to activate the DC link fast discharge.

The DC link fast discharge is started later with delay time (p3862) when the following conditions apply:

- BI: p3863 = 1 signal.
- an external line contactor is opened via r0863.1 "energize contactor".

The DC link fast discharge is interrupted when the following conditions apply:

- BI: p3863 = 0 signal.
- ON command for the infeed.

Recommendation: The DC link fast discharge should be activated if there is an external line contactor and is correctly interconnected (r0863.1, p0860). If the DC link fast discharge is not activated together with an external line contactor, then faults can occur when precharging (e.g. F30027).

Dependency: Refer to: r3864

Refer to: F30027

Note: The DC link fast discharge is only possible for "booksize" formats. This function is not supported for "chassis" formats.

r3864.0...7 BO: Braking Module DC link fast discharge / BM DC link dischg

A_INF (Brk Mod ext), S_INF (Brk Mod ext), R_INF (Brk Mod ext), B_INF (Brk Mod ext)

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** -	**Func. diagram:** 9951
P-Group: Commands	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Signal to control (energize) terminal X21.2 "DC link fast discharge" on the Braking Module.

This binector output is used as signal source to interconnect to a digital output. The digital output must be connected to terminal X21.2 of the particular Braking Module.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Fast discharge Braking Module 1	High	Low	-
01	Fast discharge Braking Module 2	High	Low	-
02	Fast discharge Braking Module 3	High	Low	-
03	Fast discharge Braking Module 4	High	Low	-
04	Fast discharge Braking Module 5	High	Low	-
05	Fast discharge Braking Module 6	High	Low	-
06	Fast discharge Braking Module 7	High	Low	-
07	Fast discharge Braking Module 8	High	Low	-

Dependency: Refer to: p3863

Refer to: F30027

Warning:

It must be carefully ensured that the binector outputs BO: p3864.n are correctly interconnected and also that the appropriate digital outputs are correctly connected up.

If the interconnection/connection is incorrect, in the case of an active DC link fast discharge, the software could execute another function (incorrect function) via binector outputs BO: p3864.n or could also permanently control the DC link fast discharge even if the line contactor is closed.

Note: The DC link fast discharge is only possible for "booksize" formats. This function is not supported for "chassis" formats.

p3865[0...7] BI: Braking Module pre-alarm I2t shutdown / BM pre-A I2t shutd

A_INF (Brk Mod ext), S_INF (Brk Mod ext), R_INF (Brk Mod ext), B_INF (Brk Mod ext)

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32 / Binary	**Dyn. index:** -	**Func. diagram:** 9951
P-Group: -	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0

Description: Sets the signal source for the message "Pre-alarm I2t shutdown" of the Braking Module.

BI: p3865[0...7] = 1 signal --> no pre-alarm I2t shutdown

BI: p3865[0...7] = 0 signal --> pre-alarm I2t shutdown (A06901)

Dependency: Refer to: A06901

Note: For the Braking Module, this message is output via the following terminal:

- X21.4 for the "Booksize" format

This function is not supported for the "chassis" format.

p3866[0...7] BI: Braking Module fault / BM fault

A_INF (Brk Mod ext), S_INF (Brk Mod ext), R_INF (Brk Mod ext), B_INF (Brk Mod ext)

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32 / Binary	**Dyn. index:** -	**Func. diagram:** 9951
P-Group: -	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0

Description: Sets the signal source for the "Fault" message of the Braking Module.

BI: p3866[0...7] = 1 signal --> No fault

BI: p3866[0...7] = 0 signal --> fault (A06900)

For a 0 signal, an acknowledgment via binector output r3861 is automatically carried out at certain time intervals.

Dependency: Refer to: A06900

Note: For the Braking Module, this message is output via the following terminal:

- X21.4 for the "Booksize" format
- X21.5 for the "Chassis" format

p3870 Long stator configuration / Long stator config

SERVO, SERVO_AC, SERVO_I_AC

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** -
P-Group: -	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0000 bin

Description: Sets the configuration when operating a long stator motor.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Activate long stator help functions	Active	Inactive	-
01	Suppress Gx_ZSW.14	Active	Inactive	-

Dependency: Refer to: p3871, p3872, p3873, p3874, r3875, p3876, p3878, p3879

Notice: The following restrictions apply to this function:
- it is not permissible to change over the drive data set.
- the encoder/drive may not be parked using a PROFIBUS telegram.
- a maximum of 4 drives may be connected to the Control Unit.
- it is not permissible to commutate with the zero mark (p0404).

Note: For bit 00:
All of the help functions for long stator motors can be enabled/disabled using this bit.
For bit 01:
When the bit is set, bit 14 (parking encoder active) is set to 0 in the encoder status word GX_ZSW independent of whether the encoder is parked or not.

p3871 BI: Set long stator signal source commutation angle (p3872) / Set s_src com ang

SERVO, SERVO_AC, SERVO_I_AC

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32 / Binary	**Dyn. index:** -	**Func. diagram:** -
P-Group: -	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0

Description: Sets the signal source to set the commutation angle available via connector input p3872.

Dependency: Refer to: p3870, p3872, p3873, p3874, r3875, p3876, p3878, p3879

Danger: Setting an incorrect commutation angle can result in instability in the closed-loop control and in turn injure personnel or cause damage to the machine!

Note: Setting takes place for a 0/1 signal edge.

p3872 CI: Long stator signal source commutation angle / S s com angle

SERVO, SERVO_AC, SERVO_I_AC

p3880 BI: ESM activation signal source / ESM act s s

VECTOR, VECTOR_AC

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32 / Binary	**Dyn. index:** -	**Func. diagram:** 7033
P-Group: Functions	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0

Description: Sets the signal source to activate the essential service mode (ESM) via digital input.

Using this function, when required the motor can be operated for as long as possible (e.g. to extract smoke).

BI: p3880 = 1 signal:

The essential service mode is activated.

BI: p3880 = 0 signal:

The essential service mode is deactivated.

Dependency: The function can only be activated for the following products:

- SINAMICS G130/G150/S150 (VECTOR)
- SINAMICS S120 AC drive (AC/AC, CU310-2 with PM240-2, VECTOR_AC)

If the signal source for the ESM activation is interconnected (p3880 > 0), and a motor encoder is parameterized (p0187, p0400), then for an encoder fault, the fault response is automatically activated (p0491 = 1).

Refer to: p3881, p3882, p3883, p3886, r3887, p3888, r3889

Warning: When activating the essential service mode (BI: p3880 = 1 signal), the motor immediately runs according to the selected setpoint source. When the essential service mode is activated, the motor cannot be stopped using the OFF commands.

Note: ESM: Essential Service Mode

Permissible signal sources:

- BO: r0722.x (high active)
- BO: r0723.x (low active), x = 0 ... 17, 20, 21

p3881 ESM setpoint source / ESM setp_src

VECTOR

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: Integer16	**Dyn. index:** -	**Func. diagram:** 7033
P-Group: Functions	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	7	0

Description: Sets the setpoint source for essential service mode (ESM).

Value:
0: Last known setpoint (r1078 smoothed)
1: Fixed speed setpoint 15 (p1015)
3: Fieldbus
5: TB30/TM31 analog input
6: Enable the response OFF1
7: Enable the response OFF2

Note: ESM: Essential Service Mode

When the essential service mode is activated, the effective speed setpoint is displayed in r1114.

For p3881 = 0:

The last known setpoint value is only safely and reliably transferred if it was present for at least 30 s prior to activating the essential service mode.

Speed setpoints from the jog mode (p1058, p1059) are not taken into account.

For p3881 = 5:

The signal source for the setpoint via analog input for TB30/TM31 is set via p3886.

For p3881 = 6:

n_act = 0: pulse suppression and switching on inhibited.

n_active > 0: braking along the ramp-function generator down ramp (p1121), pulse cancellation and switching on inhibited.

For p3881 = 7:

n_act = 0: pulse suppression and switching on inhibited.

n_act > 0: immediate pulse cancellation and switching on inhibited.

p3881 ESM setpoint source / ESM setp_src

p3900	**Completion of quick commissioning / Compl quick_comm**		
HLA	**Can be changed:** C2(1)	**Calculated:** -	**Access level:** 1
	Data type: Integer16	**Dyn. index:** -	**Func. diagram:** -
	P-Group: Displays, signals	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0	3	0

Description: Exits quick commissioning (p0010 = 1) with automatic calculation of all parameters of all existing drive data sets that depend on the entries made during quick commissioning.

p3900 = 1 initially includes a parameter reset (factory setting, the same as p0970 = 1) for all parameters of the drive object; however, without overwriting the entries made during the quick commissioning.

The interconnections of PROFIBUS PZD telegram selection (p0922) and the interconnections via p0700, p1000 and p1500 are re-established and all of the dependent motor, open-loop and control-loop control parameters are calculated (corresponding to p0340 = 1).

p3900 = 2 includes the restoration of the interconnections of PROFIBUS PZD telegram selection (p0922) and the interconnections via p0700, p1000 and p1500 and the calculations corresponding to p0340 = 1.

p3900 = 3 only includes the calculations associated with the motor, open-loop and closed-loop control parameters corresponding to p0340 = 1F.

Value:
0: No quick parameterization
1: Quick parameterization after parameter reset
2: Quick parameterization (only) for BICO and motor parameters
3: Quick parameterization for motor parameters (only)

Notice: After the value has been modified, no further parameter modifications can be made and the status is shown in r3996. Modifications can be made again when r3996 = 0.

Note: When the calculations have been completed, p3900 and p0010 are automatically reset to a value of zero.

When calculating motor, open-loop and closed-loop control parameters (such as for p0340 = 1) parameters associated with a selected Siemens catalog motor are not overwritten.

p3900	**Completion of quick commissioning / Compl quick_comm**		
SERVO, SERVO_AC, SERVO_I_AC	**Can be changed:** C2(1)	**Calculated:** -	**Access level:** 1

Min	**Max**	**Factory setting**
0.000 [h]	340.28235E36 [h]	0.000 [h]

Description: Displays the measured operating hours since the last fan replacement.

r3974 Drive unit status word / Drv_unit ZSW

CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410

Can be changed: -	**Calculated:** -	**Access level:** 1
Data type: Unsigned32	**Dyn. index:** -	**Func. diagram:** -
P-Group: -	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the status word for the drive unit.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Software reset active	Yes	No	-
01	Writing of parameters disabled as parameter save in progress	Yes	No	-
02	Writing of parameters disabled as macro is running	Yes	No	-

r3977 BICO counter topology / BICO counter topo

CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410

Can be changed: -	**Calculated:** -	**Access level:** 4
Data type: Unsigned32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Commands	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the BICO interconnections that have been parameterized in the complete (overall) topology.

The counter is incremented by one for each modified BICO interconnection.

Dependency: Refer to: r3978, r3979

r3978 BICO CounterDevice / BICO CounterDevice

CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410

Can be changed: -	**Calculated:** -	**Access level:** 4
Data type: Unsigned32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Commands	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the counter reading for modified BICO interconnections on this device.
The counter is incremented by one for each modified BICO interconnection.

r3979 BICO counter drive object / BICO counter DO

SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, A_INF, S_INF, R_INF, B_INF, TM31, TM41, TM17, TM15, TM15DI_DO, TM120, TM150, TB30, TM54F_MA, TM54F_SL, ENC, HUB, CU_LINK

Can be changed: -	**Calculated:** -	**Access level:** 4
Data type: Unsigned32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Commands	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the counter reading for modified BICO interconnections on this drive object.
The counter is incremented by one for each modified BICO interconnection.

p3981 Acknowledge drive object faults / Ackn DO faults

All objects

Can be changed: U, T	**Calculated:** -	**Access level:** 2
Data type: Unsigned8	**Dyn. index:** -	**Func. diagram:** 8060
P-Group: Messages	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	1	0

Description: Setting to acknowledge all active faults of a drive object.

Notice: Safety messages cannot be acknowledged using this parameter.

Note: Parameter should be set from 0 to 1 to acknowledge.
After acknowledgment, the parameter is automatically reset to 0.

p3985 Master control mode selection / PcCtrl mode select

SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, A_INF, S_INF, R_INF, B_INF

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Integer16	**Dyn. index:** -	**Func. diagram:** -
P-Group: Setpoints	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	1	0

Description: Sets the mode to change over the master control / LOCAL mode.

Value:
0: Change master control for STW1.0 = 0
1: Change master control in operation

Danger: When changing the master control in operation, the drive can manifest undesirable behavior - e.g. it can accelerate up to another setpoint.

r3986 Number of parameters / Param count

All objects

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** -
P-Group: -	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the number of parameters for this drive unit.

The number comprises the device-specific and the drive-specific parameters.

Dependency: Refer to: r0980, r0981, r0989

r3988[0...1] Boot state / Boot_state

CU_I, CU_I_D410

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Integer16	**Dyn. index:** -	**Func. diagram:** -
P-Group: -	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	10800	-

Description: Index 0:

Displays the boot state.

Index 1:

Displays the partial boot state.

Value:

0: Not active
1: Fatal fault
10: Fault
20: Reset all parameters
30: Drive object modified
40: Download using the commissioning tool
50: Parameter download using commissioning tool
90: Reset Control Unit and delete drive objects
100: Start initialization
101: Wait for topology input
110: Instantiate Control Unit basis
111: Insert drive object
112: Remove drive object
113: Change drive object number
114: Change component number
115: Parameter download using commissioning tool
117: Remove component
150: Wait until actual topology determined
160: Evaluate topology
170: Instantiate Control Unit reset
180: Initialization YDB configuration information
190: FW update for CU LINK slaves
200: First commissioning
210: Create drive packages
250: Wait for topology acknowledge
325: Wait for input of drive type
350: Determine drive type
360: Write into topology-dependent parameters
370: Wait until p0009 = 0 is set
380: Check topology
550: Call conversion functions for parameter
625: Wait non-cyclic starting DRIVE-CLiQ
650: Start cyclic operation
660: Evaluate drive commissioning status
670: Automatic FW update DRIVE-CLiQ components
680: Wait for CU LINK slaves
690: Wait non-cyclic starting DRIVE-CLiQ

700: Save parameters
725: Wait until DRIVE-CLiQ cyclic
740: Check the ability to operate
745: Start of the time slices
750: Interrupt enable
800: Initialization finished
10050: Wait for synchronization
10100: Wait for CU LINK slaves
10150: Wait until actual topology determined
10200: Evaluate component status
10250: Call conversion functions for parameter
10300: Preparation cyclic operation
10350: Automatic FW update DRIVE-CLiQ components
10400: Wait for slave properties
10450: Check CX/NX status
10500: Wait until DRIVE-CLiQ cyclic
10550: Carry out warm start
10600: Evaluate, encoder status
10800: Partial boot completed

Index: [0] = System
[1] = Partial boot

r3988[0...1] Boot state / Boot_state

CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Integer16	**Dyn. index:** -	**Func. diagram:** -
P-Group: -	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	10800	-

Description: Index 0:
Displays the boot state.
Index 1:
Displays the partial boot state.

Value:
0: Not active
1: Fatal fault
10: Fault
20: Reset all parameters
30: Drive object modified
40: Download using the commissioning tool

10500: Wait until DRIVE-CLiQ cyclic
10550: Carry out warm start
10600: Evaluate, encoder status
10800: Partial boot completed

Index: [0] = System
[1] = Partial boot

r3996[0...1] Parameter write inhibit status / Par_write inhib st

All objects	**Can be changed:** -	**Calculated:** -	**Access level:** 1
	Data type: Unsigned8	**Dyn. index:** -	**Func. diagram:** -
	P-Group: -	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	-	-	-

Description: Displays whether writing to parameters is inhibited.

r3996[0] = 0:

Parameter write not inhibited.

0 < r3996[0] < 100:

Parameter write inhibited. The value shows how the calculations are progressing.

Index: [0] = Progress calculations
[1] = Cause

Note: For index [1]:

Only for internal Siemens troubleshooting.

r3998 First device commissioning / First dev_comm

HLA	**Can be changed:** -	**Calculated:** -	**Access level:** 3
	Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** -
	P-Group: -	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0	65535	-

Description: Displays whether the device must be commissioned for the first time.

0 = Yes

2 = No

r3998[0...n] First drive commissioning / First drv_comm

SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned16	**Dyn. index:** DDS, p0180	**Func. diagram:** -
P-Group: -	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	65535	-

Description: Displays whether the drive still has to be commissioned for the first time.
0 = Yes
2 = No

r3998 First infeed commissioning / First inf_comm

A_INF, S_INF, R_INF, B_INF

Can be changed: -	**Calculated:** -	**Access level:** 3

P-Group: -	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	65535	-

Description: Displays whether the infeed must be commissioned for the first time.
0 = Yes
2 = No

r4021 Digital inputs terminal actual value / DI actual value

SERVO (Dig IO)

Can be changed: -	**Calculated:** -	**Access level:** 2
Data type: Unsigned32	**Dyn. index:** -	**Func. diagram:** 2201
P-Group: Commands	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the actual value at the digital inputs.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	DI/DO 0 distributed (X3.2)	High	Low	2201
01	DI/DO 1 distributed (X3.4)	High	Low	2201

Note: If a DI/DO is parameterized as output (p4028.x = 1), then r4021.x = 0 is displayed.
DI/DO: Bidirectional Digital Input/Output

r4021 TM15DI/DO digital inputs, terminal actual value / TM15D DI act val

TM15DI_DO

Can be changed: -	**Calculated:** -	**Access level:** 2
Data type: Unsigned32	**Dyn. index:** -	**Func. diagram:** 9400, 9401, 9402
P-Group: Commands	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the actual value at the digital inputs.
This means that the actual input signal can be checked at terminal DI x or DI/DO x prior to switching from the simulation mode (p4095.x = 1) to terminal mode (p4095.x = 0).

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	DI/DO 0 (X520.2)	High	Low	-
01	DI/DO 1 (X520.3)	High	Low	-
02	DI/DO 2 (X520.4)	High	Low	-
03	DI/DO 3 (X520.5)	High	Low	-
04	DI/DO 4 (X520.6)	High	Low	-
05	DI/DO 5 (X520.7)	High	Low	-
06	DI/DO 6 (X520.8)	High	Low	-
07	DI/DO 7 (X520.9)	High	Low	-
08	DI/DO 8 (X521.2)	High	Low	-
09	DI/DO 9 (X521.3)	High	Low	-
10	DI/DO 10 (X521.4)	High	Low	-
11	DI/DO 11 (X521.5)	High	Low	-
12	DI/DO 12 (X521.6)	High	Low	-
13	DI/DO 13 (X521.7)	High	Low	-
14	DI/DO 14 (X521.8)	High	Low	-
15	DI/DO 15 (X521.9)	High	Low	-
16	DI/DO 16 (X522.2)	High	Low	-
17	DI/DO 17 (X522.3)	High	Low	-
18	DI/DO 18 (X522.4)	High	Low	-
19	DI/DO 19 (X522.5)	High	Low	-
20	DI/DO 20 (X522.6)	High	Low	-
21	DI/DO 21 (X522.7)	High	Low	-
22	DI/DO 22 (X522.8)	High	Low	-
23	DI/DO 23 (X522.9)	High	Low	-

Note: If a DI/DO is parameterized as output (p4028.x = 1), then r4021.x = 0 is displayed.

DI/DO: Bidirectional Digital Input/Output

r4021 TM31 digital inputs terminal actual value / TM31 DI act value

TM31

Can be changed: -	**Calculated:** -	**Access level:** 2
Data type: Unsigned32	**Dyn. index:** -	**Func. diagram:** 9549, 9550, 9552, 9560, 9562
P-Group: Commands	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the actual value at the digital inputs.

This means that the actual input signal can be checked at terminal DI x or DI/DO x prior to switching from the simulation mode (p4095.x = 1) to terminal mode (p4095.x = 0).

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	DI 0 (X520.1)	High	Low	-
01	DI 1 (X520.2)	High	Low	-
02	DI 2 (X520.3)	High	Low	-
03	DI 3 (X520.4)	High	Low	-
04	DI 4 (X530.1)	High	Low	-
05	DI 5 (X530.2)	High	Low	-
06	DI 6 (X530.3)	High	Low	-
07	DI 7 (X530.4)	High	Low	-
08	DI/DO 8 (X541.2)	High	Low	-
09	DI/DO 9 (X541.3)	High	Low	-
10	DI/DO 10 (X541.4)	High	Low	-
11	DI/DO 11 (X541.5)	High	Low	-

Note: If a DI/DO is parameterized as output (p4028.x = 1), then r4021.x = 0 is displayed.

DI: Digital Input

DI/DO: Bidirectional Digital Input/Output

r4021 TM41 digital inputs terminal actual value / TM41 DI act val

TM41

Can be changed: -	**Calculated:** -	**Access level:** 2

P-Group: Commands	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the actual value at the digital inputs.

This means that the actual input signal can be checked at terminal DI x or DI/DO x prior to switching from the simulation mode (p4095.x = 1) to terminal mode (p4095.x = 0).

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	DI 0 (X522.1)	High	Low	9660
01	DI 1 (X522.2)	High	Low	9660
02	DI 2 (X522.3)	High	Low	9660
03	DI 3 (X522.4)	High	Low	9660
08	DI/DO 0 (X521.1)	High	Low	9661
09	DI/DO 1 (X521.2)	High	Low	9661
10	DI/DO 2 (X521.3)	High	Low	9662
11	DI/DO 3 (X521.4)	High	Low	9662

Note: If a DI/DO is parameterized as output (p4028.x = 1), then r4021.x = 0 is displayed.

DI: Digital Input

DI/DO: Bidirectional Digital Input/Output

r4021 TB30 digital inputs terminal actual value / TB30 DI act value

TB30

Can be changed: -	**Calculated:** -	**Access level:** 2
Data type: Unsigned32	**Dyn. index:** -	**Func. diagram:** 9100
P-Group: Commands	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the actual value at the digital inputs.

This means that the actual input signal can be checked at terminal DI x prior to switching from the simulation mode (p4095.x = 1) to the terminal mode (p4095.x = 0).

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	DI 0 (X481.1)	High	Low	-
01	DI 1 (X481.2)	High	Low	-
02	DI 2 (X481.3)	High	Low	-
03	DI 3 (X481.4)	High	Low	-

Note: DI: Digital Input

r4022.0...1 CO/BO: Digital inputs status / DI status

SERVO (Dig IO)

Can be changed: -	**Calculated:** -	**Access level:** 1
Data type: Unsigned32	**Dyn. index:** -	**Func. diagram:** 2201
P-Group: Commands	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the status of the digital inputs.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	DI/DO 0 distributed (X3.2)	High	Low	2201
01	DI/DO 1 distributed (X3.4)	High	Low	2201

Dependency: Refer to: r4023

Note: If a DI/DO is parameterized as output (p4028.x = 1), then r4021.x = 0 is displayed.

DI/DO: Bidirectional Digital Input/Output

r4022.0...23 CO/BO: TM15DI/DO digital inputs status / TM15D DI status

TM15DI_DO

Can be changed: -	**Calculated:** -	**Access level:** 1

P-Group: Commands	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0

Description: Sets the signal source for the digital output DO 0 (X542.1, X542.2, X542.3) of Terminal Module 31 (TM31).

Digital output 0 of TM31 is a relay output.

If the signal at the binector input p4030 is low, then terminal COM 0 (X542.2) is connected to NC 0 (X542.1). This connection also matches the mechanical quiescent setting of the relay.

If the signal at the binector input p4030 is high, then terminal COM 0 (X542.2) is connected to NO 0 (X542.3).

Note: DO: Digital Output

NC: Normally Closed contact

NO: Normally Open contact

Description: Sets the signal source for the digital output DO 1 (X542.4, X542.5, X542.6) of Terminal Module 31 (TM31).

Digital output 1 of TM31 is a relay output.

If the signal at the binector input p4031 is low, then terminal COM 1 (X542.5) is connected to NC 1 (X542.4). This connection also matches the mechanical quiescent setting of the relay.

If the signal at the binector input p4031 is high, then terminal COM 1 (X542.5) is connected to NO 1 (X542.6).

Note: DO: Digital Output

NC: Normally Closed contact

NO: Normally Open contact

Can be changed: T	**Calculated:** -	**Access level:** 2
Data type: Integer16	**Dyn. index:** -	**Func. diagram:** 9560
P-Group: Commands	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	1	0

Description: Sets the limit for the total output voltage of terminals X541.1, X541.2, X541.3 and X541.4 (DI/DO 8 ... 11) of Terminal Module 31 (TM31).

Value:
0: 0.1 A total current limit DI/DO 8 ... 11
1: 1.0 A total current limit DI/DO 8 ... 11

Dependency: Refer to: p4028

Warning: Since the sum of the output currents at terminals X541.1, X541.2, X541.3 and X541.4 is limited, an overcurrent or short circuit at one output terminal can cause a dip in the signal at the other terminals.

p4056[0...1] TM31 analog inputs type / TM31 AI type

TM31	**Can be changed:** U, T	**Calculated:** -	**Access level:** 1
	Data type: Integer16	**Dyn. index:** -	**Func. diagram:** 9566, 9568
	P-Group: Terminals	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0	5	4

Description: Sets the type of analog inputs of Terminal Module 31 (TM31).

p4056[x] = 0, 4 correspond to a voltage input (r4052, p4057, p4059 are displayed in V).

p4056[x] = 2, 3, 5 correspond to a current input (r4052, p4057, p4059 are displayed in mA).

In addition, the associated switch S5 must be appropriately set.

AI 0: S5.0 = V --> voltage input, S5.0 = I --> current input (burden resistor = 250 Ohm)

AI 1: S5.1 = V --> voltage input, S5.1 = I --> current input (burden resistor = 250 Ohm)

Value:
0: Unipolar voltage input (0 V ... +10 V)
2: Unipolar current input (0 mA ... +20 mA)
3: Unipolar current input monitored (+4 mA to +20 mA)
4: Bipolar voltage input (-10 V ... +10 V)
5: Bipolar current input (-20 mA to +20 mA)

Index:
[0] = AI 0 (X521.1/X521.2, S5.0)
[1] = AI 1 (X521.3/X521.4, S5.1)

Warning: The maximum voltage difference between the analog input terminals AI+, AI- and the ground of the TM31 (X520.6, X530.3) may not exceed 35 V.

For operation with the load resistor switched in, the voltage between the differential inputs AI+ and AI- may not exceed 15 V or the impressed current of 60 mA; if this is not carefully observed, the input will be damaged.

Notice: For operation as a voltage input/current input, switch S5.0 or S5.1 must be appropriately set.

Note: When changing p4056, the parameters of the scaling characteristic (p4057, p4058, p4059, p4060) are overwritten with the following default values:

For p4056 = 0, 4, p4057 is set to 0.0 V, p4058 to 0.0 %, p4059 to 10.0 V and p4060 to 100.0 %.

For p4056 = 2, 5, p4057 is set to 0.0 mA, p4058 to 0.0 %, p4059 to 20.0 mA and p4060 to 100.0 %.

For p4056 = 3, p4057 is set to 4.0 mA, p4058 to 0.0 %, p4059 to 20.0 mA and p4060 to 100.0 %.

P-Group: Terminals	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	4	4

Description: Sets the type of analog outputs of Terminal Module 31 (TM31).

p4076[x] = 1, 4 correspond to a voltage output (p4074, p4078, p4080, p4083 are displayed in V).

p4076[x] = 0, 2, 3 correspond to a current output (p4074, p4078, p4080, p4083 are displayed in mA).

Value:
0: Current output (0 mA ... +20 mA)
1: Voltage output (0 V ... +10 V)
2: Current output (+4 mA ... +20 mA)
3: Current output (-20 mA ... +20 mA)
4: Voltage output (-10 V ... +10 V)

Index: [0] = AO 0 (X522.1, X522.2, X522.3)
[1] = AO 1 (X522.4, X522.5, X522.6)

Dependency: Refer to: p4077, p4078, p4079, p4080

Note: When changing p4076, the parameters of the scaling characteristic (p4077, p4078, p4079, p4080) are overwritten with the following default values:

For p4076 = 0, 3, p4077 is set to 0.0 %, p4078 to 0.0 mA, p4079 to 100.0 % and p4080 to 20.0 mA.

For p4076 = 1, 4, p4077 is set to 0.0 %, p4078 to 0.0 V, p4079 to 100.0 % and p4080 to 10.0 V.

For p4076 = 2, p4077 is set to 0.0 %, p4078 to 4.0 mA, p4079 to 100.0 % and p4080 to 20.0 mA.

Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-20.000	20.000	0.000

Description: Sets the offset for the analog outputs of Terminal Module 31 (TM31).
The offset is added to the output signal after the scaling characteristic.

Index: [0] = AO 0 (X522.1, X522.2, X522.3)
[1] = AO 1 (X522.4, X522.5, X522.6)

Dependency: The unit of this parameter (V or mA) depends on the analog input type.
Refer to: r4076, p4076

Note: This means, for example, the offset of a downstream isolating amplifier can be compensated.

p4083[0...1] TB30 analog outputs offset / TB30 AO offset

TB30

Can be changed: U, T	**Calculated:** -	**Access level:** 1
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 9106
P-Group: Terminals	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-10.000	10.000	0.000

Description: Sets the offset for the analog outputs of Terminal Board 30 (TB30).
The offset is added to the output signal after the scaling characteristic.

Index: [0] = AO 0 (X482.5/X482.6)
[1] = AO 1 (X482.7/X482.8)

Min	**Max**	**Factory setting**
-	-	0000 bin

Description: Sets the setpoint for the input signals in the simulation mode of the digital inputs of the Terminal Board 30 (TB30).

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	DI 0 (X481.1)	High	Low	-
01	DI 1 (X481.2)	High	Low	-
02	DI 2 (X481.3)	High	Low	-
03	DI 3 (X481.4)	High	Low	-

Dependency: The simulation of a digital input is selected using p4095.

Refer to: p4095

Note: This parameter is not saved when data is backed-up (p0971, p0977).

DI: Digital Input

p4097[0...1] TM31 analog inputs simulation mode / TM31 AI sim_mode

TM31

Can be changed: U, T	**Calculated:** -	**Access level:** 2

Refer to: p4097

Note: This parameter is not saved when data is backed-up (p0971, p0977).

AI: Analog Input

p4099 Inputs/outputs sampling time / I/O t_sampl

SERVO (Dig IO)

Can be changed: C1(3)	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Commands	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
125.00 [µs]	5000.00 [µs]	4000.00 [µs]

Description: Sets the sampling time for the inputs and outputs.

Dependency: The parameter can only be modified for p0009 = 3, 29.

The sampling times can only be set as an integer multiple of the SERVO clock cycle (p0115).

Refer to: p0009

Note: The changed sampling time is immediately effective after a completed sub-boot (p0009 -> 0).

p4099 TM15 inputs/outputs sampling time / TM15 I/O t_sample

TM15

Can be changed: C1(3)	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 9389
P-Group: Commands	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
31.25 [µs]	500.00 [µs]	125.00 [µs]

Description: The sampling time of the Terminal Module 15 (TM15) is determined by the DRIVE-CLiQ clock cycle of the line to which the component is attached.

It is not possible to specify this using p4099.

When switching on, parameter p4099 is correctly set to the resulting sampling time.

p4099 TM15DI/DO inputs/outputs sampling time / TM15D I/O t_sampl

TM15DI_DO			
	Can be changed: C1(3)	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 9399, 9400
	P-Group: Commands	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0.00 [µs]	5000.00 [µs]	4000.00 [µs]

Description: Sets the sampling time for the inputs and outputs of Terminal Module 15 (TM15).

Dependency: The parameter can only be modified for p0009 = 3, 29.

The following applies for the sampling time:

The sampling times at a DRIVE-CLiQ line must be integral multiples of one another.

The sampling times of this TM must be an integral multiple of a servo or vector drive that exists in the system.

The minimum permissible sampling time is 125 µs.

Refer to: p0009, r0110, r0111

Note: The changed sampling time is immediately effective after a completed sub-boot (p0009 -> 0).

Parameter p4099[0] must never be equal to zero.

p4099 TM17 inputs/outputs sampling time / TM17 I/O t_sample

TM17			
	Can be changed: C1(3)	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 9419
	P-Group: Commands	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	31.25 [µs]	500.00 [µs]	125.00 [µs]

Description: The sampling time of the Terminal Module 17 (TM17) is determined by the DRIVE-CLiQ clock cycle of the line to which the component is attached.

It is not possible to specify this using p4099.

When switching on, parameter p4099 is correctly set to the resulting sampling time.

p4099[0...2] TM31 inputs/outputs sampling time / TM31 I/O t_sample

TM31			
	Can be changed: C1(3)	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 9549, 9550
	P-Group: Commands	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0.00 [µs]	5000.00 [µs]	4000.00 [µs]

Description: Sets the sampling time for the inputs and outputs of Terminal Module 31 (TM31).

Index:
[0] = Digital inputs/outputs (DI/DO)
[1] = Analog inputs (AI)
[2] = Analog outputs (AO)

Dependency: The parameter can only be modified for p0009 = 3, 29.

The following applies for the sampling time:

The sampling times at a DRIVE-CLiQ line must be integral multiples of one another.

The sampling times of this TM must be an integral multiple of a servo or vector drive that exists in the system.

The minimum permissible sampling time is 125 µs.

The sampling times entered in index 0 (digital inputs/outputs) and index 2 (analog outputs) must always be greater than or equal to the sampling time in index 1 (analog inputs).

Refer to: p0009, r0110, r0111

Notice: The sampling times entered in index 0 (digital inputs/outputs) and index 2 (analog outputs) must always be greater than or equal to the sampling time in index 1 (analog inputs).

Note: The changed sampling time is immediately effective after a completed sub-boot (p0009 -> 0).

Parameter p4099[0] must never be equal to zero.

p4099[0...3] TM41 inputs/outputs sampling time / TM41 I/O t_sample

TM41	**Can be changed:** C1(3)	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 9659, 9660
	P-Group: Commands	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0.00 [µs]	5000.00 [µs]	[0] 4000.00 [µs] [1] 4000.00 [µs] [2] 0.00 [µs] [3] 125.00 [µs]

Description: Sets the sampling time for the inputs and outputs of Terminal Module 41 (TM41).

Index:
[0] = Digital inputs/outputs (DI/DO)
[1] = Analog inputs (AI)
[2] = Not present
[3] = Incremental encoder emulation

Dependency: The parameter can only be modified for p0009 = 3, 29.

The sampling times can only be set as an integer multiple of the DRIVE-CLiQ clock cycle.

The minimum permissible sampling time is 125 µs.

Refer to: p0009, r0110, r0111

Refer to: A35228

Note: The value of the sampling time of the incremental encoder emulation p4099[3] can be pre-set in both operating modes (p4400). The next time that the system boots, the validity of the value is checked. For an invalid value, message F35228 and/or A01223 is output.

The changed sampling time is immediately effective after a completed sub-boot (p0009 -> 0).

The sampling time of a TM41 in the SINAMICS mode (p4400 = 1) must be the same as that of the emulated encoder.

The sampling time of a TM41 in the SIMOTION mode (p4400 = 0) is determined by the topology used

p4099[0...2] TB30 inputs/outputs sampling time / TB30 I/O t_sample

TB30	**Can be changed:** C1(3)	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 9099, 9100
	P-Group: Commands	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0.00 [µs]	5000.00 [µs]	[0] 4000.00 [µs] [1] 4000.00 [µs] [2] 4000.00 [µs]

Description: Sets the sampling time for the inputs and outputs of Terminal Board 30 (TB30).

Index:
[0] = Digital inputs/outputs (DI/DO)
[1] = Analog inputs (AI)
[2] = Analog outputs (AO)

Dependency: The parameter can only be modified for p0009 = 3, 29.

The sampling times can only be set as an integer multiple of the lowest basic sampling time (r0110[0]).

Refer to: p0009, r0110, r0111

Note: The changed sampling time is immediately effective after a completed sub-boot (p0009 -> 0).

For clock cycle synchronous PROFIBUS operation, the TB30 hardware (e.g. analog/digital converter) is operated with the PROFIBUS clock cycle (r2064[1]). This clock cycle is also kept after the PROFIBUS connection has been exited up to the next time that the Control Unit is switched off. In this case, a faster sampling time than the PROFIBUS clock cycle is not practical in p4099[0...2].

p4100 Spindle supplementary temperature sensor type / Supp_temp sens typ

SERVO (Spin_diag), SERVO_AC (Spin_diag)

Can be changed: T	**Calculated:** -	**Access level:** 1
Data type: Integer16	**Dyn. index:** -	**Func. diagram:** -
P-Group: -	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	6	0

Description: Sets the sensor type to evaluate the spindle supplementary temperature.

Value:
0: Evaluation disabled
2: KTY84
6: PT1000

Dependency: Refer to: p4102, p4103, r4104, r4105, r4107

p4100[0...3] TM120 temperature evaluation, sensor type / TM120 sensor type

TM120

Can be changed: T	**Calculated:** -	**Access level:** 1
Data type: Integer16	**Dyn. index:** -	**Func. diagram:** 9605, 9606
P-Group: -	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	6	1

Description: Sets the sensor type for temperature evaluation via Terminal Module 120 (TM120).

This means that the temperature sensor type is selected and the evaluation is switched in.

Value:
0: Evaluation disabled
1: PTC thermistor
2: KTY84
4: Bimetallic NC contact
6: PT1000

Index:
[0] = Temperature channel 0
[1] = Temperature channel 1
[2] = Temperature channel 2
[3] = Temperature channel 3

Notice: For p4102[0...7] = 251 °C, evaluation of the corresponding threshold is deactivated.

For sensor type "PTC thermistor" (p4100[0...3] = 1), the following applies:

To activate the corresponding alarm or fault, p4102[0...7] must be set <= 250 °C.

Note: The temperature sensors are connected to the following terminals:

X521.2(+) and X521.1(-) = channel 0

X521.4(+) and X521.3(-) = channel 1

X521.6(+) and X521.5(-) = channel 2

X521.8(+) and X521.7(-) = channel 3

p4100[0...11] TM150 sensor type / TM150 sensor type

TM150

Can be changed: T	**Calculated:** -	**Access level:** 1
Data type: Integer16	**Dyn. index:** -	**Func. diagram:** 9626, 9627
P-Group: -	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	6	5

Description: Sets the sensor type for Terminal Module 150 (TM150)

This means that the temperature sensor type is selected and the evaluation is switched in.

Value:
0: Evaluation disabled
1: PTC thermistor
2: KTY84
4: Bimetallic NC contact
5: PT100
6: PT1000

Index: [0] = Temperature channel 0
[1] = Temperature channel 1
[2] = Temperature channel 2
[3] = Temperature channel 3
[4] = Temperature channel 4
[5] = Temperature channel 5
[6] = Temperature channel 6
[7] = Temperature channel 7
[8] = Temperature channel 8
[9] = Temperature channel 9
[10] = Temperature channel 10
[11] = Temperature channel 11

Notice: For p4102[0...23] = 251 °C, evaluation of the corresponding threshold is deactivated.
For sensor type "PTC thermistor" and "Bimetallic NC contact" (p4100[0...11] = 1, 4), the following applies:
To activate the corresponding alarm or fault, p4102[0...23] must be set <= 250 °C.

Note: The temperature sensors are connected to the following terminals:
X531 = channel 0 (for 2x2 wire evaluation, additionally channel 6)
X532 = channel 1 (for 2x2 wire evaluation, additionally channel 7)
X533 = channel 2 (for 2x2 wire evaluation, additionally channel 8)
X534 = channel 3 (for 2x2 wire evaluation, additionally channel 9)
X535 = channel 4 (for 2x2 wire evaluation, additionally channel 10)
X536 = channel 5 (for 2x2 wire evaluation, additionally channel 11)
Details on the wiring are included in the parameter description for p4108.

p4100 TM31 sensor type / TM31 sensor type

TM31			
	Can be changed: T	**Calculated:** -	**Access level:** 1
	Data type: Integer16	**Dyn. index:** -	**Func. diagram:** 9576
	P-Group: -	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0	6	0

Description: Sets the sensor type for Terminal Module 31 (TM31)
This means that the temperature sensor type is selected and the evaluation is switched in.

Value:
0: Evaluation disabled
1: PTC thermistor
2: KTY84
6: PT1000

Notice: For p4102[0...1] = 251 °C, evaluation of the corresponding threshold is deactivated.
For sensor type "PTC thermistor" (p4100 = 1), the following applies:
To activate the corresponding alarm or fault, p4102[0...1] must be set <= 250 °C.

Note: The temperature sensor is connected at terminals X522.7(+) and X522.8(-).

r4101[0...3] TM120 sensor resistance / TM120 R_sensor

TM120			
	Can be changed: -	**Calculated:** -	**Access level:** 3
	Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** 9605, 9606
	P-Group: Terminals	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** PERCENT	**Expert list:** 1
	Min	**Max**	**Factory setting**
	- [ohm]	- [ohm]	- [ohm]

Description: Displays the actual resistance value of the temperature sensor connected at the Terminal Module.

Index: [0] = Temperature channel 0
[1] = Temperature channel 1
[2] = Temperature channel 2
[3] = Temperature channel 3

Note: The maximum measurable resistance value is approx. 1720 Ohm.

The temperature sensors are connected to the following terminals:

X521.2(+) and X521.1(-) = channel 0

X521.4(+) and X521.3(-) = channel 1

X521.6(+) and X521.5(-) = channel 2

X521.8(+) and X521.7(-) = channel 3

r4101[0...11] TM150 sensor resistance / TM150 R_sensor

TM150			
	Can be changed: -	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 9626, 9627
	P-Group: Terminals	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** PERCENT	**Expert list:** 1
	Min	**Max**	**Factory setting**
	- [ohm]	- [ohm]	- [ohm]

Description: Displays the actual resistance value of the temperature sensor connected at the Terminal Module.

Index:
[0] = Temperature channel 0
[1] = Temperature channel 1
[2] = Temperature channel 2
[3] = Temperature channel 3
[4] = Temperature channel 4
[5] = Temperature channel 5
[6] = Temperature channel 6
[7] = Temperature channel 7
[8] = Temperature channel 8
[9] = Temperature channel 9
[10] = Temperature channel 10
[11] = Temperature channel 11

Note: The maximum measurable resistance value is approx. 2500 Ohm.

For 1x2 and 2x2 wire evaluation:

The actual sensor resistance is displayed in this parameter(i.e. the wire resistance (p4110) is taken into account).

The temperature sensors are connected to the following terminals:

X531 = channel 0 (for 2x2 wire evaluation, additionally channel 6)

X532 = channel 1 (for 2x2 wire evaluation, additionally channel 7)

X533 = channel 2 (for 2x2 wire evaluation, additionally channel 8)

X534 = channel 3 (for 2x2 wire evaluation, additionally channel 9)

X535 = channel 4 (for 2x2 wire evaluation, additionally channel 10)

X536 = channel 5 (for 2x2 wire evaluation, additionally channel 11)

Details on the wiring are included in the parameter description for p4108.

r4101 TM31 sensor resistance / TM31 R_sensor

TM31			
	Can be changed: -	**Calculated:** -	**Access level:** 3
	Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** 9576
	P-Group: Terminals	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** PERCENT	**Expert list:** 1
	Min	**Max**	**Factory setting**
	- [ohm]	- [ohm]	- [ohm]

Description: Displays the actual resistance value of the temperature sensor connected at the Terminal Module.

Note: The maximum measurable resistance value is approx. 1720 Ohm.

The temperature sensor is connected at terminals X522.7(+) and X522.8(-).

p4102[0...1] Spindle supplementary temperature fault threshold/alarm thresh. / Suppl_temp F/A_thr

SERVO (Spin_diag), SERVO_AC (Spin_diag)

Can be changed: U, T	**Calculated:** -	**Access level:** 1
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: -	**Unit group:** 21_1	**Unit selection:** p0505
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-300.0 [°C]	9999.0 [°C]	[0] 120.0 [°C] [1] 155.0 [°C]

Description: Sets the fault threshold/alarm threshold for the temperature evaluation of the spindle.

Temperature actual value r4105 > p4102[0] --> alarm A07017 is initiated.

Temperature actual value r4105 > p4102[1] --> fault F07018 is initiated.

Index:
[0] = Alarm threshold
[1] = Fault threshold

Dependency: Refer to: p4100, r4104, r4105

Refer to: A07017, F07018

Note: For A07017 the following applies:

- Remains until the temperature actual value (r4105) reaches or falls below the value (p4102[0] - hysteresis).

For F07018 the following applies:

- Remains until the temperature actual value (r4105) reaches or falls below the value (p4102[1] - hysteresis) and the fault has been acknowledged.
- the hysteresis is 2 K and cannot be changed by the user.

p4102[0...7] TM120 fault threshold/alarm threshold / TM120 F/A_thresh

TM120

Can be changed: U, T	**Calculated:** -	**Access level:** 1
Data type: Integer16	**Dyn. index:** -	**Func. diagram:** 9605, 9606
P-Group: -	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-48 [°C]	251 [°C]	251 [°C]

Description: Sets the fault threshold/alarm threshold for Terminal Module 120 (TM120).

A35211 is initiated, if the temperature actual value r4105[0] > p4102[0]

F35207 is initiated if the temperature actual value r4105[0] > p4102[1] or timer p4103[0] has expired

A35212 is initiated, if the temperature actual value r4105[1] > p4102[2]

F35208 is initiated if the temperature actual value r4105[1] > p4102[3] or timer p4103[1] has expired

A35213 is initiated, if the temperature actual value r4105[2] > p4102[4]

F35209 is initiated if the temperature actual value r4105[2] > p4102[5] or timer p4103[2] has expired

A35214 is initiated, if the temperature actual value r4105[3] > p4102[6]

F35210 is initiated if the temperature actual value r4105[3] > p4102[7] or timer p4103[3] has expired

For alarms A35211, A35212, A35213, A35214 the following applies:

- Remains until the temperature actual value (r4105[0...3]) reaches or falls below the value (p4102[0, 2, 4, 6] - hysteresis).

For fault F35207, F35208, F35209, F35210 the following applies:

- Remains until the temperature actual value (r4105[0...3]) reaches or falls below the value (p4102[1, 3, 5, 7] - hysteresis) and the fault has been acknowledged.
- the hysteresis value is 5 K and cannot be changed.

Index:
[0] = Channel 0 alarm threshold (A35211)
[1] = Channel 0 fault threshold (F35207)
[2] = Channel 1 alarm threshold (A35212)
[3] = Channel 1 fault threshold (F35208)
[4] = Channel 2 alarm threshold (A35213)
[5] = Channel 2 fault threshold (F35209)
[6] = Channel 3 alarm threshold (A35214)
[7] = Channel 3 fault threshold (F35210)

Dependency: Refer to: p4103

Notice: Fault F35207 ... F35210 only causes the drive to shut down if there is at least one BICO interconnection between the drive and TM120.

For p4102[0...7] = 251 °C, evaluation of the corresponding threshold is deactivated.

For sensor type "PTC thermistor" (p4100[0...3] = 1), the following applies:

To activate the corresponding alarm or fault, p4102[0...7] must be set <= 250 °C.

Note: The temperature sensor is connected to the following terminals:

X521.2(+) and X521.1(-) = channel 0

X521.4(+) and X521.3(-) = channel 1

X521.6(+) and X521.5(-) = channel 2

X521.8(+) and X521.7(-) = channel 3

p4102[0...23] TM150 fault threshold/alarm threshold / TM150 F/A_thresh

TM150			
	Can be changed: U, T	**Calculated:** -	**Access level:** 1

	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	-99 [°C]	251 [°C]	251 [°C]

Description: Sets the fault threshold/alarm threshold for Terminal Module 150 (TM150).

For alarms (even indices [0, 2, 4 ... 22]), the following applies:

- the corresponding alarm is initiated, if the temperature actual value associated with a temperature channel exceeds the associated alarm threshold (r4105[x] > p4102[2x]. In addition, the timer is started (p4103[x]).

- the alarm remains until the temperature actual value (r4105[x]) reaches or falls below the threshold value (p4102[2x]) - hysteresis (p4118[x]).

For faults (uneven indices [1, 3, 5 ... 23]), the following applies:

- the corresponding fault is initiated, if the temperature actual value associated with a temperature channel exceeds the associated fault threshold (r4105[x] > p4102[2x+1] or the associated timer (p4103[x] has expired.

- the fault remains until the temperature actual value (r4105[x]) reaches or falls below the threshold value (p4102[2x+1]) - hysteresis (p4118[x]) and the fault has been acknowledged.

[21] = Channel 10 fault threshold (F35406)
[22] = Channel 11 alarm threshold (A35417)
[23] = Channel 11 fault threshold (F35407)

Dependency: Refer to: p4103, r4104, r4105, p4118

Notice: Faults F35207 ... F35210 and F35400 ... F35407 only cause the drive to be shut down if there is at least one BICO interconnection between the drive and the TM150.

For p4102[0...23] = 251 °C, evaluation of the corresponding threshold is deactivated.

For sensor type "PTC thermistor" (p4100[0...11] = 1), the following applies:

To activate the corresponding alarm or fault, p4102[0...23] must be set <= 250 °C.

Note: The hysteresis can be set in p4118[0...11].

p4102[0...1] TM31 fault threshold/alarm threshold / TM31 F/A_thresh

TM31

Can be changed: U, T	**Calculated:** -	**Access level:** 1
Data type: Integer16	**Dyn. index:** -	**Func. diagram:** 9576
P-Group: -	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-48 [°C]	251 [°C]	[0] 100 [°C] [1] 120 [°C]

Description: Sets the fault threshold/alarm threshold for Terminal Module 31 (TM31).

A35211 is initiated, if the temperature actual value r4105[0] > p4102[0]

F35207 is initiated if the temperature actual value r4105[0] > p4102[1] or timer p4103[0] has expired

For alarm A35211 the following applies:

- Remains until the temperature actual value (r4105) reaches or falls below the value (p4102[0] - hysteresis).

For fault F35207 the following applies:

- Remains until the temperature actual value (r4105) reaches or falls below the value (p4102[1] - hysteresis) and the fault has been acknowledged.

- the hysteresis value is 5 K and cannot be changed by the user.

Index: [0] = Alarm threshold
[1] = Fault threshold

Dependency: Refer to: r4104

Notice: Fault F35207 only causes the drive to be shut down if there is at least one BICO interconnection between the drive and TM31.

For p4102[0...1] = 251 °C, evaluation of the corresponding threshold is deactivated.

For sensor type "PTC thermistor" (p4100 = 1), the following applies:

To activate the alarm or fault, p4102[0...1] must be set <= 250 °C.

p4103 Spindle supplementary temperature delay time / Suppl_temp t_delay

SERVO (Spin_diag), SERVO_AC (Spin_diag)

Can be changed: C2(3), U, T	**Calculated:** -	**Access level:** 1
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Motor	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.000 [s]	600.000 [s]	0.000 [s]

Description: Sets the delay time for the output of the fault for the temperature evaluation of the spindle.

The timer is started when the alarm threshold (p4102[0]) is exceeded.

If the delay time has expired and the alarm threshold has, in the meantime, not been fallen below, then fault F07018 is output.

The fault can be acknowledged, if, after the delay time has expired, the alarm threshold is again fallen below.

If the fault threshold (p4102[1]) is exceeded before the delay time has expired, then fault F07018 is immediately output.

Dependency: Refer to: p4100, r4104, r4105

Note: With p4103 = 0, the timer is deactivated and only the fault threshold is effective.

p4103[0...3] TM120 temperature evaluation delay time / TM120 temp t_delay

TM120

Can be changed: C2(3), U, T	**Calculated:** -	**Access level:** 1
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 9605, 9606
P-Group: Motor	**Unit group:** -	**Unit selection:** -

Min	**Max**	**Factory setting**
0.000 [ms]	600000.000 [ms]	0.000 [ms]

Description: Sets the delay time for the output of the fault for the temperature evaluation of Terminal Module 120 (TM120).

The timer is started when the alarm threshold (p4102[0, 2, 4, 6]) is exceeded.

If the delay time has expired and the alarm threshold has, in the meantime, not been fallen below, then fault F35207 ... F53210 is output.

The fault can be acknowledged, if, after the delay time has expired, the alarm threshold is again fallen below.

For sensor type "KTY84" "PT1000" (p4100[0...3] = 2, 6), the following applies:

If the fault threshold (p4102[1, 3, 5, 7]) is exceeded before the delay time has expired, then fault F35207 ... F35210 is immediately output.

For sensor type "PTC thermistor" (p4100[0...3] = 1), the following applies:

- Alarm and fault threshold simultaneously respond. The fault is only issued after the delay time has expired.

Index:
[0] = Temperature channel 0
[1] = Temperature channel 1
[2] = Temperature channel 2
[3] = Temperature channel 3

Dependency: Refer to: r4104

Warning: Fault F35207 ... F35210 only causes the drive to shut down if there is at least one BICO interconnection between the drive and TM120.

Note: With p4103 = 0, the timer is deactivated and only the fault threshold is effective.

p4103[0...11] TM150 delay time / TM150 t_delay

TM150

Can be changed: C2(3), U, T	**Calculated:** -	**Access level:** 1

Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.0 [s]	600.0 [s]	0.0 [s]

Description: Sets the delay time for the output of the fault for the Terminal Module 150 (TM150).

The timer is started when the alarm threshold (e.g. p4102[0]) is exceeded.

If the delay time has expired and the alarm threshold has, in the meantime, not been fallen below, then the corresponding fault is output.

The fault can be acknowledged, if, after the delay time has expired, the alarm threshold is again fallen below.

For sensor type "KTY84", "PT100", "PT1000" (p4100[0...11] = 2, 5, 6) the following applies:

- if the fault threshold (e.g. p4102[1]) is exceeded before the delay time has expired, then the corresponding fault is immediately output.

For sensor type "PTC thermistor", "Bimetallic NC contact" (p4100[0...11] = 1, 4), the following applies:

- Alarm and fault threshold simultaneously respond. The fault is only issued after the delay time has expired.

Index:
[0] = Temperature channel 0
[1] = Temperature channel 1
[2] = Temperature channel 2
[3] = Temperature channel 3
[4] = Temperature channel 4
[5] = Temperature channel 5
[6] = Temperature channel 6
[7] = Temperature channel 7
[8] = Temperature channel 8
[9] = Temperature channel 9
[10] = Temperature channel 10
[11] = Temperature channel 11

Dependency: Refer to: p4102, r4104, r4105, p4118

Warning: The fault F35207 ... F35210 and F35400 ... 35407 only results in the drive being shut down if at least one BICO interconnection exists between the drive and the TM150.

Note: For p4103 = 0 s and sensor type "KTY84", "PT100", "PT1000" (p4100[0...11] = 2, 5, 6) the following applies:

- the corresponding fault can only be initiated via the fault threshold (output of the timer is always a logical 0).

For p4103 = 0 s and sensor type "PTC thermistor", "Bimetallic NC contact" (p4100[0...11] = 1, 4), the following applies:

- the corresponding alarm and fault are simultaneously output (delay time = 0 s).

p4103 TM31 temperature evaluation delay time / TM31 temp t_delay

	- [°C]	- [°C]	- [°C]

Description: Displays the temperature actual value for the Terminal Module 31 (TM31)

Dependency: For sensor type "PTC thermistor" (p4100 = 1), the following applies:

- below the nominal response temperature, r4105 = -50°C.
- above the nominal response temperature, r4105 = 250 °C.

For sensor type "KTY84" "PT1000" (p4100 = 2, 6), the following applies:

- the displayed value corresponds to the temperature actual value.

Refer to: p4100

Note: r4105 = -300 °C is displayed in the following cases:

- temperature actual value invalid (F35920 output).
- no sensor selected (p4100 = 0).

The temperature sensor is connected at terminals X522.7(+) and X522.8(-).

r4107 Spindle supplementary temperature sensor use / Supp_temp_sens_use

0	6	-

Description: Displays the installation location of the sensor to evaluate the spindle supplementary temperature.

Value:
0: None
1: Temperature S6
2: Bearing temperature front
3: Bearing temperature rear
4: Housing temperature front
5: Housing temperature rear
6: Cooling medium temperature intake

Dependency: Refer to: p4100

Note: The installation location of the temperature sensor is specified by the manufacturer.

p4108[0...5] TM150 terminal block measuring method / TM150 meas method

TM150

Can be changed: T	**Calculated:** -	**Access level:** 1
Data type: Integer16	**Dyn. index:** -	**Func. diagram:** 9625, 9626, 9627
P-Group: -	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	3	1

Description: Sets the measuring method for the terminal block X531 ... X536 for the Terminal Module 150 (TM150).

For p4108[0...5] = 0 (1x2 wire evaluation):

- the temperature sensor is connected at terminals 1(+) and 2(-).

For p4108[0...5] = 1 (2x2 wire evaluation):

- the first temperature sensor is connected at terminals 1(+) and 2(-).
- the second temperature sensor is connected at terminals 3(+) and 4(-).

For p4108[0...5] = 2 (3 wire evaluation):

- the temperature sensor is connected at terminals 3(+) and 4(-).
- the measuring conductor is connected at terminal 1(+).
- terminals 2(-) and 4(-) must be jumpered.

For p4108[0...5] = 3 (4 wire evaluation):

- the temperature sensor is connected at terminals 3(+) and 4(-).
- the measuring conductor is connected at terminals 1(+) and 2(-).

Value:
0: 1x2 wire evaluation
1: 2x2 wire evaluation
2: 3 wire evaluation
3: 4 wire evaluation

Index:
[0] = X531
[1] = X532
[2] = X533
[3] = X534
[4] = X535
[5] = X536

Note: The temperature sensors are connected to the following terminals:

X531 = channel 0 (for 2x2 wire evaluation, additionally channel 6)

X532 = channel 1 (for 2x2 wire evaluation, additionally channel 7)

X533 = channel 2 (for 2x2 wire evaluation, additionally channel 8)

X534 = channel 3 (for 2x2 wire evaluation, additionally channel 9)

X535 = channel 4 (for 2x2 wire evaluation, additionally channel 10)

X536 = channel 5 (for 2x2 wire evaluation, additionally channel 11)

For p4108[0...5] = 0, 2, 3 (1x2, 3, 4 wire evaluation):

The temperature channel belonging to the terminal block with the higher number is automatically deactivated (e.g. for X531 with 3-wire evaluation, channel 6 is deactivated).

p4109[0...11] TM150 wire resistance measurement / TM150 R_wire meas

TM150

Can be changed: T	**Calculated:** -	**Access level:** 1
Data type: Integer16	**Dyn. index:** -	**Func. diagram:** 9626, 9627
P-Group: -	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	1	0

Description: Setting to start the measurement of the wire resistance for a channel for the Terminal Module 150 (TM150).

For a 2 wire evaluation, the total wire resistance is measured and saved. During the temperature evaluation, the temperature actual value is automatically calibrated using the measured wire resistance.

Procedure:

1. Select the measuring method (1x2/2x2) for the corresponding terminal block (p4108[0...5] = 0, 1).
2. Set the required sensor type for the corresponding channel (p4100[x] = 1 ... 6, x = 0...5 or 0...11).
3. Jumper the sensor to be connected (short-circuit the sensor cable close to the sensor).
4. Connect the sensor conductors to the appropriate terminals 1(+), 2(-) or 3(+), 4(-).
5. For the corresponding channel, start the measurement of the wire resistance (p4109[x] = 1).
6. After p4109[x] = 0, check the measured resistance value in p4110[x].
7. Remove the jumper across the temperature sensor.

Value:
0: Inactive
1: Start

Index:
[0] = Temperature channel 0
[1] = Temperature channel 1
[2] = Temperature channel 2
[3] = Temperature channel 3
[4] = Temperature channel 4
[5] = Temperature channel 5
[6] = Temperature channel 6
[7] = Temperature channel 7
[8] = Temperature channel 8
[9] = Temperature channel 9
[10] = Temperature channel 10
[11] = Temperature channel 11

Dependency: Refer to: p4100, p4108, p4110

Notice: Wire resistance measurement is only possible for 1x2 or 2x2 wire evaluation (p4108[0...5] = 0, 1).

Note: The wire resistance value can be also directly entered into p4110[0...11].

The automatic conductor calibration for 1x2 and 2x2 wire evaluation is always performed with the value in p4110[0...11].

p4110[0...11] TM150 wire resistance value / TM150 R_wire value

TM150

07	Temperature channel 7	Yes	No	-
08	Temperature channel 8	Yes	No	-
09	Temperature channel 9	Yes	No	-
10	Temperature channel 10	Yes	No	-
11	Temperature channel 11	Yes	No	-

Dependency: Refer to: r4105, r4112, r4113, r4114

Notice: When forming groups, it must be ensured that in one particular group, only temperature channels with the following sensor types are included:

- "KTY84", "PT100", "PT1000" (p4100[0...11] = 2, 5, 6), real temperature actual value

or alternatively

- "PTC thermistor", "bimetallic NC contact" (p4100[0...11] = 1, 4), fictitious temperature actual value (-50 °C, 250 °C)

If these sensor types are combined within one group, then the calculated values for maximum, minimum and average value will be falsified.

Note: Active and inactive temperature channels can be included in one group. However, when calculating the values (r4112, r4113, r4114) only the active temperature channels with valid actual value are taken into account (r4105[0...11] not equal to -300 °C).

r4112[0...2] CO: TM150 group temperature actual value maximum value / TM150 grp temp max

Description: Is used to synchronize the timer of Terminal Module 15 (TM15) with the system time of the DP master.
Bit 12 ... 15:
After synchronization with the DP master, the module sends its sign-of-life in the form of a counter.
Bit 0:
This SYNC signal is set if the module has aligned its time to the system time of the DP master.
Bit 9:
This bit is set if a fault has occurred on the module (r0945).

DI 13: r4312.11 ... 10
DI 14: r4312.13 ... 12
DI 15: r4312.15 ... 14
Possible edge states:
Bit x, y = 0, 0 --> no edge detection
Bit x, y = 0, 1 --> 1st edge detected
Bit x, y = 1, 0 --> 2nd edge detected
Bit x, y = 1, 1 --> both edges detected

Note: DI: Digital Input

r4313 TM15 edge status digital input 16 ... 23 / TM15 EdgSt DI16-23

Description: Displays the edge status for digital input 16 ... 23 of Terminal Module 15 (TM15).
Assignment of the digital inputs to the bits:
DI 16: r4313.1 ... 0
DI 17: r4313.3 ... 2
DI 18: r4313.5 ... 4
DI 19: r4313.7 ... 6
DI 20: r4313.9 ... 8
DI 21: r4313.11 ... 10
DI 22: r4313.13 ... 12
DI 23: r4313.15 ... 14
Possible edge states:
Bit x, y = 0, 0 --> no edge detection
Bit x, y = 0, 1 --> 1st edge detected
Bit x, y = 1, 0 --> 2nd edge detected
Bit x, y = 1, 1 --> both edges detected

Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	1111 0011 bin

Description: Sets the mode for the incremental encoder emulation.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Zero mark enable	Yes	No	9674
01	Zero marks synchronized with zero position of absolute encoders	Yes	No	9674
04	Activate higher actual value resolution	Yes	No	-
05	Activate higher setpoint resolution	Yes	No	-

06	Deactivate residual value handling in the setpoint channel	Yes	No	-
07	Activate output frequencies greater than 750 kHz	Yes	No	-

Note: For bit 00, 01:

This bit is used to configure the zero mark via X520.

When the TM41 is operated in the SINAMICS mode (p4400 = 1), the following applies:

A new zero mark search is initiated by switching in the zero mark at the TM41 (p4401.0 = 1). The zero mark is output at the TM41 as soon as it was synchronized with the zero position/zero mark of the leading encoder.

For p4401.1 = 1, the following applies:

The zero pulse is only output via X520 when the absolute encoder passes the zero position of the absolute position (modulo converted).

For p4401.1 = 0, the following applies:

The zero pulse is output via X520 compatible with previous firmware versions (< V4.3). The zero pulse is output when the TM41 (modulo converted) passes the position it was in when the 24 V supply was switched on.

For bit 07:

For hardware versions A and B, this bit has no significance (output frequency = 512 kHz).

For p4401.7 = 0, the following applies:

The maximum output frequency is 750 kHz (from hardware version C).

For p4401.7 = 1, the following applies:

The maximum output frequency is 1024 kHz (from hardware version C).

r4402.0...2 CO/BO: TM41 encoder emulation status / Enc_emulat status

TM41

P-Group: Encoder	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0001 bin

Description: Sets the controller option for incremental encoder emulation on Terminal Module 41 (TM41).

p4404.0 = 1:

Control with minimum following error (precontrol active) for synchronous position and synchronous zero-mark emulation

p4404.1 = 1:

In the case of TTL encoders, the control response improves at slow velocities.

p4404.0 = p4404.1 = 0

Control with fixed following error.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Precontrol	Active	Inactive	-
01	Precontrol with adaptation for TTL encoder	Active	Inactive	-

Note: The parameter is only effective in the "SINAMICS" operating mode (p4400 = 1).

p4408 TM41 encoder emulation pulse number leading encoder / TM41 enc puls no.

TM41

Can be changed: C2(4)	**Calculated:** -	**Access level:** 3

P-Group: Encoder	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
2	18	11

Description: Parameters p4408 and p4418 define the position setpoint format for the TM41 (CI: p4420).

The two parameters p4408 and p4418 of the TM41 must be set the same as parameters p0408 and p0418 of the encoder interconnected at connector input p4420. The zero mark is only correctly output if this condition is maintained.

For p4408 = 0, the following applies:

Parameters p0408 and p0418 in addition assume the function of p4408 and p4418.

r4419 TM41 encoder emulation diagnostics position setpoint / TM41 Diag s_set

TM41

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Integer32	**Dyn. index:** -	**Func. diagram:** 9676
P-Group: Encoder	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the position setpoint after taking into account the step up / step down.

The format of this parameter is defined by p0408/p0418.

p4420 CI: TM41 encoder emulation position setpoint / Enc_emul s_setp

TM41

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32 / Integer32	**Dyn. index:** -	**Func. diagram:** 9676
P-Group: Setpoints	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0

Description: Sets the signal source for the incremental encoder emulation position setpoint.

Recommendation: The position actual value of the leading encoder in the current controller clock cycle is available in r0479.

This is the reason that the following BICO interconnection should be preferably set:

CI: p4420 (TM41) = r0479 (e.g. SERVO)

Dependency: Refer to: p4400, r4403

Notice: General conditions for incremental encoder emulation can be found in the following literature:

SINAMICS S120 Function Manual Drive Functions

Note: The parameter is not effective in the SIMOTION operating mode (p4400 = 0).

An encoder actual value (r0479) can only be interconnected once on a TM41.

For p4401.0 = 1(enable zero mark), the following applies:

In this case, p4420 must be interconnected with r0479 of the leading encoder.

After successful internal, automatic synchronization, the zero mark of the incremental encoder emulation is output in synchronism to the zero position/zero mark of the leading encoder.

The zero position of the leading encoder depends on the encoder type and the selected referencing technique (p0493, p0494, p0495).

p4421 TM41 encoder emulation deadtime compensation / Enc_emul t_dead

TM41

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 9676
P-Group: Setpoints	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-10.00	10.00	0.00

Description: Sets the deadtime compensation for incremental encoder emulation.

This factor defines the multiplier in which the encoder position setpoint of the incremental encoder emulation is shifted depending on the velocity.

Dependency: For p4421 = 0, the deadtime compensation for the position setpoint is switched out.

For p4421 <> 0, the deadtime compensation is taken into account as follows:

Setpoint new = setpoint via CI: p4420 + delta s * p4421

delta s: Position change per sampling time (p4099[3]), internally smoothed

Refer to: p4400

Note: The parameter is not effective in the SIMOTION operating mode (p4400 = 0).

p4422 TM41 encoder emulation position setpoint inversion / Enc_emul s_set inv

TM41

Can be changed: C2(4)	**Calculated:** -	**Access level:** 3
Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** 9676
P-Group: Encoder	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	1	0

Description: Setting to invert the position setpoint for Terminal Module 41 (TM41).

0 -> Position setpoint (CI: p4420) is evaluated as normal.

1 -> Position setpoint (CI: p4420) is processed inverted.

Dependency: Refer to: p4420

p4423 TM41 encoder emulation standstill adaptation / Enc standst_adapt

TM41

Can be changed: C2(4)	**Calculated:** -	**Access level:** 3
Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** 9676
P-Group: Encoder	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	2000	4

Description: Sets standstill adaptation on Terminal Module 41 (TM41).

p4423 is used to specify the number of clock cycles (one clock cycle = p4099[3]) used for encoder standstill detection. Once this time has elapsed, any potential deviation is compensated when adaptation is active.

Parameter value = 0: adaptation inactive

Parameter value > 0: adaptation active

Dependency: Refer to: r4403, p4404, p4420

Danger: The option p4404.1 = 1 is only effective if TM41 DAC is being used.

If the possibility of a TM41 DAC (new) being replaced by a TM41 SAC (old) cannot be excluded, this option should not be set.

TM41 SAC: Article No. = 6SL3055-0AA00-3PA0

TM41 DAC: Article No. = 6SL3055-0AA00-3PA1

Note: The parameter is only effective in the SINAMICS operating mode (p4400 = 1).

The parameter value must be assigned a value of 4 or more to ensure that the system functions properly.

This parameter is only relevant in the following cases:

- TTL encoder is available
- the controller option "Precontrol with adaptation for TTL encoder" has been activated (p4404.1 = 1)

p4426 TM41 encoder emulation pulses for zero mark / Enc_emul pulses ZM

TM41

Can be changed: C2(4), U, T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** -	**Func. diagram:** 9674, 9676
P-Group: Encoder	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	16384	0

Description: Sets pulse number to output the zero mark for the incremental encoder simulation/emulation.

Example:

p0408 = 2048 (encoder pulses)

p4426 = 512 (pulses for the zero mark)

--> Position direction: The zero mark is output after 512 pulses.

--> Negative direction: The zero mark is output after 1536 pulses.

Dependency: Refer to: p0408

Note: The pulses for the zero mark (p4426) must be less than the encoder pulse number (p0408).

r4427 TM41 encoder emulation zero mark position / TM41 NM_position

TM41

Can be changed: -	**Calculated:** -	**Access level:** 4
Data type: Integer32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Encoder	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the position of the next zero mark in a positive traversing direction.

The format of this parameter is defined by p0408/p0418 (the same as the position actual value Xact1).

p4600[0...n] Motor temperature sensor 1 sensor type / Temp_sens 1 type

SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC

Note: For a value not equal to -200.0 °C, the following applies:

- this temperature display is valid.
- a KTY/PT1000 temperature sensor is connected.

For a value equal to -200.0 °C, the following applies:

- this temperature display is not valid (temperature sensor error).
- a PTC sensor or bimetallic NC contact is connected.
- the temperature sensor evaluation is deactivated (p0600 = 0 or p0601 = 0).
- the sensor channel is deactivated (p460x = 0 or p461x = 0).

p4630[0...n] Absolute encoder linear measuring step factor / Abs_enc meas fact

SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, ENC

Can be changed: C2(4)	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** EDS, p0140	**Func. diagram:** -
P-Group: Encoder	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
1	4294967295	1

Description: Sets the resolution of the absolute position for a linear absolute encoder as factor from p0407.

Note: The serial protocol of an absolute encoder provides the position with a certain resolution (e.g. 100 nm).

The resolution is calculated from p0407/p4630.

p4631[0...n] Cylinder distance per encoder revolution / x_cyl per rev

HLA

Can be changed: C2(4)	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** EDS, p0140	**Func. diagram:** -
P-Group: Encoder	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0 [µm]	4294967295 [µm]	0 [µm]

Description: Setting to convert rotary motion into linear motion for hydraulic drives.

The value corresponds to the distance in µm for one encoder revolution.

Note: For a linear drive (r0108.12 = 1) with rotary encoder (p0404.0 = 0) this factor defines the conversion of the encoder information for the linear motion of the velocity control.

r4640[0...95] Encoder diagnostics state machine / Enc diag stat_ma

SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, ENC

Can be changed: -	**Calculated:** -	**Access level:** 4
Data type: Unsigned32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Encoder	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the encoder diagnostics for the PROFIdrive interface.

p4641[0...2] OEM encoder diagnostic signal selection / OEM enc diag sel

SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC

Can be changed: C2(4), U, T	**Calculated:** -	**Access level:** 3
Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** -
P-Group: Encoder	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	65535	0

Description: Sets the trace functionality for OEM encoder manufacturers.

Index:
[0] = Encoder 1
[1] = Encoder 2
[2] = Encoder 3

p4642 Encoder fault test function / Encoder fault test

SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC

Can be changed: C2(4), U, T	**Calculated:** -	**Access level:** 3
Data type: Unsigned8	**Dyn. index:** -	**Func. diagram:** -
P-Group: Encoder	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	255	0

Description: Test function to initiate an encoder fault

p4642 = 0/1 signal:

The currently used motor encoder issues an encoder fault.

p4642 = 1/0 signal:

The encoder fault that was issued is cleared after acknowledgment.

Notice: It is not permissible that a data set is switched over between an encoder fault being issued and its deletion.

p4643[0...n] DRIVE-CLiQ encoder repeat telegram / DQ enc repeat

SERVO, SERVO_AC, SERVO_I_AC

Can be changed: C1(3), C2(4)	**Calculated:** -	**Access level:** 4
Data type: Unsigned16	**Dyn. index:** EDS, p0140	**Func. diagram:** -
P-Group: Encoder	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0000 0001 0000 0001 bin

Description: Sets the telegram repeats for the DRIVE-CLiQ encoder telegram.

For bits 02, 01, 00 or 10, 09, 08:

Sets the number of maximum tolerated transfer errors in the particular direction before a fault is output.

The higher set value between p4643 and p9915 or p9916 is effective.

0 0 0 = 0

0 0 1 = 1

0 1 0 = 2

...

1 1 1 = 7

For bits 04, 12:

When the bit is set, the telegrams are sent twice in the particular direction. This therefore reduces the probability of telegram failure.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Actual value direction data transfer error number bit 0	Yes	No	-
01	Actual value direction data transfer error number bit 1	Yes	No	-
02	Actual value direction data transfer error number bit 2	Yes	No	-
04	Actual value direction activate repeat telegram	Yes	No	-
08	Setpoint direction data transfer error number bit 0	Yes	No	-
09	Setpoint direction data transfer error number bit 1	Yes	No	-
10	Setpoint direction data transfer error number bit 2	Yes	No	-
12	Setpoint direction activate telegram repeat	Yes	No	-

p4649[0...n] Encoder function reserve amplitude limit incremental signals / Enc fct amp inc

SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, ENC

Can be changed: C2(4)	**Calculated:** -	**Access level:** 3
Data type: Unsigned16	**Dyn. index:** EDS, p0140	**Func. diagram:** -
P-Group: Encoder	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	500	0

Description: Amplitude threshold of the incremental signals for the function reserve.

If the set amplitude threshold on the incremental signals is fallen below, then alarm A3x407 "Encoder x; function limit reached " is output.

Note: An amplitude threshold of 230 mV can be used as default value.

p4650 Encoder functional reserve component number / Enc fct_res num

CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** -
P-Group: Displays, signals	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	399	0

Description: Sets the component number (p0141) of the encoder whose functional reserve is to be displayed (r4651).

Dependency: Refer to: r4651

r4651[0...3] Encoder functional reserve / Enc fct_reserve

CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Displays, signals	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
- [%]	- [%]	- [%]

Description: Displays the functional reserve of the encoder selected via p4650.

0 ... 25 %:

The function limit has been reached. A service is recommended.

26 ... 100 %:

The encoder is working in the specified range.

Index:
[0] = Function reserve 1
[1] = Function reserve 2
[2] = Function reserve 3
[3] = Function reserve 4

Dependency: Refer to: p4650

Note: Value = 999 means:

- the component specified in p4650 is not connected
- the encoder does not support the display of the functional reserve

p4652[0...2] XIST1_ERW reset mode / XIST1_ERW res mode

SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC

Can be changed: C1(3)	**Calculated:** -	**Access level:** 3
Data type: Integer16	**Dyn. index:** -	**Func. diagram:** 4750
P-Group: -	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	3	0

Description: Sets the mode to reset the actual value in XIST_ERW (CO: r4653).

Value:
0: Inactive
1: Reset with zero mark
2: Reset with BICO
3: Reset with selected zero mark

Index:
[0] = Encoder 1
[1] = Encoder 2
[2] = Encoder 3

Dependency: Refer to: r4653, r4654, p4655

Note: The absolute value is only valid after passing the zero mark.

If value = 1:

The value in XIST1_ERW is reset when passing every zero mark.

If value = 2:

The value in XIST1_ERW is reset with a 0/1 edge via binector input p4655.

If value = 3:

The value in XIST1_ERW is reset after a 0/1 edge via binector input p4655 when passing the next zero mark.

p4652 XIST1_ERW reset mode / XIST1_ERW res mode

ENC

Can be changed: C1(3)	**Calculated:** -	**Access level:** 3

p4670[0...n] Analog sensor configuration / Ana_sens config

SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, ENC

Can be changed: U, T	**Calculated:** -	**Access level:** 4
Data type: Unsigned32	**Dyn. index:** EDS, p0140	**Func. diagram:** -
P-Group: -	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0000 0000 0000 0000 0000 0000 0000 0000 bin

Description: Sets the configuration for evaluation on the analog sensor.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
06	Set velocity to 0	Yes	No	-
08	Position value range	0.0 / 1.0 pulse	-0.5 / +0.5 pulse	-
09	Fault/alarm messages	Alarm	Fault	-
10	Channel B act	Yes	No	-
11	Channel A act	Yes	No	-
13	Commutation angle constant	Yes	No	-
14	Suppress faults	Yes	No	-
31	Extrapolation	ON	OFF	-

Notice: For bit 06:

Setting the bit sets the velocity actual value (r0061) permanently to 0.

For bit 13:

Setting the bit sets the commutation angle permanently to the commutation angle offset (p0431).

Note: For bit 09:

A setting of bit = 0 will trigger a fault for the relevant channel if the actual value is invalid.

A setting of bit = 1 will trigger an alarm for the relevant channel if the actual value is invalid.

For bits 10, 11:

If both channels are activated, the actual value is generated from the mean value of both channels. If a channel fails (actual value invalid), it is not included when the mean value is generated.

For bit 14:

The bit is only evaluated for encoder 1. Otherwise no effect.

p4671[0...n] Analog sensor input / Ana_sens inp

SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, ENC

0	3	0

Description: Sets the input circuit for the analog sensor.

Value:
0: Differential
1: Single-ended A, B
2: Single-ended A*, B*
3: Single-ended A, B sensitive

Note: p4671 = 0:

The two signals on a track are evaluated differentially.

p4671 = 1:

Only the non-inverted signal on a track is evaluated.

p4671 = 2:

Only the inverted signal on a track is evaluated.

p4671 = 3:

Only the non-inverted signal on a track (high resolution) is evaluated.

p4672[0...n] Analog sensor channel A voltage at actual value zero / Ana_sens A U at 0

SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, ENC

Can be changed: U, T	**Calculated:** -	**Access level:** 4
Data type: FloatingPoint32	**Dyn. index:** EDS, p0140	**Func. diagram:** -
P-Group: -	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-10.0000 [V]	10.0000 [V]	0.0000 [V]

Description: Sets the voltage when the connected sensor is at actual value zero.

At this voltage channel A supplies an actual value of zero.

p4673[0...n] Analog sensor channel A voltage per encoder period / Ana_sens A U/per

SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, ENC

Can be changed: U, T	**Calculated:** -	**Access level:** 4
Data type: FloatingPoint32	**Dyn. index:** EDS, p0140	**Func. diagram:** -
P-Group: -	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-10.0000 [V]	10.0000 [V]	6.0000 [V]

Description: Sets the output voltage range to be mapped for the connected analog sensor.

The voltage range is determined by the following parameters:

- p4672 (voltage at actual value 0)
- p4673 (voltage per encoder period)

Note: The minimum actual value which can be mapped is equal to p4672 - p4673/2.

The maximum actual value which can be mapped is equal to p4672 + p4673/2.

p4674[0...n] Analog sensor channel B voltage at actual value zero / Ana_sens B U at 0

SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, ENC

Can be changed: U, T	**Calculated:** -	**Access level:** 4
Data type: FloatingPoint32	**Dyn. index:** EDS, p0140	**Func. diagram:** -
P-Group: -	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-10.0000 [V]	10.0000 [V]	0.0000 [V]

Description: Sets the voltage when the connected sensor is at actual value zero.

At this voltage channel B supplies an actual value of zero.

p4675[0...n] Analog sensor channel B voltage per encoder period / Ana_sens B U/per

SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, ENC

Can be changed: U, T	**Calculated:** -	**Access level:** 4
Data type: FloatingPoint32	**Dyn. index:** EDS, p0140	**Func. diagram:** -
P-Group: -	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-10.0000 [V]	10.0000 [V]	6.0000 [V]

Description: Sets the output voltage range to be mapped for the connected analog sensor.

The voltage range is determined by the following parameters:

- p4674 (voltage at actual value 0)
- p4675 (voltage per encoder period)

Note: The minimum actual value which can be mapped is equal to p4674 - p4675/2.

The maximum actual value which can be mapped is equal to p4674 + p4675/2.

p4676[0...n] Analog sensor range limit threshold / Ana_sens lim thr

SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, ENC

Can be changed: U, T	**Calculated:** -	**Access level:** 4
Data type: FloatingPoint32	**Dyn. index:** EDS, p0140	**Func. diagram:** -
P-Group: -	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.0 [%]	100.0 [%]	100.0 [%]

Description: Sets the threshold for limit monitoring of the absolute actual value on the analog sensor.

If this threshold is overshot by the actual value of a channel, a corresponding fault/alarm (p4670.9) is output.

Dependency: Refer to: p4673, p4675

p4677[0...n] Analog sensor LVDT configuration / Ana_sens LVDT conf

SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, ENC

Can be changed: C2(4)	**Calculated:** -	**Access level:** 4
Data type: Unsigned32	**Dyn. index:** EDS, p0140	**Func. diagram:** -
P-Group: Encoder	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0000 bin

Description: Sets the configuration for LVDT mode on the analog sensor.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	LVDT ON	Yes	No	-
01	Track B excitation	Yes	No	-
02	Fixed value amplitude	Yes	No	-
03	Fixed value amplitude and phase	Yes	No	-

p4678[0...n] Analog sensor LVDT ratio / An_sens LVDT ratio

SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, ENC

Can be changed: C2(4)	**Calculated:** -	**Access level:** 4
Data type: FloatingPoint32	**Dyn. index:** EDS, p0140	**Func. diagram:** -

Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.00 [%]	200.00 [%]	50.00 [%]

Description: Sets the ratio for the LVDT sensor.

p4679[0...n] Analog sensor LVDT phase / An_sens LVDT ph

SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, ENC

Can be changed: C2(4), T	**Calculated:** -	**Access level:** 4
Data type: FloatingPoint32	**Dyn. index:** EDS, p0140	**Func. diagram:** -
P-Group: Encoder	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-360.00 [°]	360.00 [°]	0.00 [°]

Description: Sets the phase for the LVDT sensor.

p4680[0...n] Zero mark monitoring tolerance permissible / ZM_monit tol perm

SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, ENC	**Can be changed:** C2(4)	**Calculated:** -	**Access level:** 3
	Data type: Unsigned32	**Dyn. index:** EDS, p0140	**Func. diagram:** -
	P-Group: Encoder	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0	1000	4

Description: Sets the permissible tolerance in encoder pulses for the zero mark distance in the context of zero mark monitoring.

Causes fault F3x100 to appear less frequently.

Dependency: Refer to: F31100

p4681[0...n] Zero mark monitoring tolerance window limit 1 positive / ZM tol lim 1 pos

SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, ENC	**Can be changed:** C2(4)	**Calculated:** -	**Access level:** 3
	Data type: Unsigned32	**Dyn. index:** EDS, p0140	**Func. diagram:** -
	P-Group: Encoder	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0	1000	2

Description: Sets the positive tolerance window in encoder pulses for limit 1 for the zero mark monitoring.

The pulse number is corrected if the deviation is less than this limit. If it is higher than this limit, fault F3x131 is triggered.

If fault F3x131 is re-parameterized to an alarm (A) or no message (N), then the encoder pulses that are not corrected are transferred to the accumulator (p4688). The accumulator can be deactivated using p0437.7.

Dependency: Refer to: p0437, p4688

Refer to: F31131

Note: This monitoring is activated by setting p0437.2 = 1 (position actual value correction).

The positive limit describes additional pulses due to EMC.

p4682[0...n] Zero mark monitoring tolerance window limit 1 negative / ZM tol lim 1 neg

SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, ENC	**Can be changed:** C2(4)	**Calculated:** -	**Access level:** 3
	Data type: Integer32	**Dyn. index:** EDS, p0140	**Func. diagram:** -
	P-Group: Encoder	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	-1001	0	-1001

Description: Sets the negative tolerance window in encoder pulses for limit 1 for the zero mark monitoring.

The pulse number is corrected if the deviation is less than this limit. If it is higher than this limit, fault F3x131 is triggered.

If fault F3x131 is re-parameterized to an alarm (A) or no message (N), then the encoder pulses that are not corrected are transferred to the accumulator (p4688). The accumulator can be deactivated using p0437.7.

Dependency: Refer to: p0437, p4681, p4688

Refer to: F31131

Note: This monitoring is activated by setting p0437.2 = 1 (position actual value correction).

For a set value = -1001, the negated value of p4681 becomes active.

The negative limit describes the pulses lost due to a covered glass panel in the incremental encoder.

p4683[0...n] Zero mark monitoring tolerance window alarm threshold positive / ZM tol A_thr pos

SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, ENC

Can be changed: C2(4)	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** EDS, p0140	**Func. diagram:** -
P-Group: Encoder	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	100000	0

Description: Sets the positive tolerance window in encoder pulses for limit 2 for the zero mark monitoring.
Accumulator (p4688) is compared with this parameter, and where relevant, alarm A3x422 is output for 5 seconds.

Dependency: Refer to: p0437, p4681, p4682, p4688
Refer to: F31131, A31422

Note: Zero mark monitoring is activated by setting p0437.2 = 1 (position actual value correction).

p4684[0...n] Zero mark monitoring tolerance window alarm threshold negative / ZM tol A_thr neg

SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, ENC

Can be changed: C2(4)	**Calculated:** -	**Access level:** 3
Data type: Integer32	**Dyn. index:** EDS, p0140	**Func. diagram:** -
P-Group: Encoder	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-100001	0	-100001

Description: Sets the negative tolerance window in encoder pulses for limit 2 for the zero mark monitoring.
Accumulator (p4688) is compared with this parameter, and where relevant, alarm A3x422 is output for 5 seconds.

Dependency: Refer to: p0437, p4683, p4688
Refer to: F31131, A31422

Note: Zero mark monitoring is activated by setting p0437.2 = 1 (position actual value correction).
For a set value = -100001, the negated value of p4683 is effective.

p4685[0...n] Speed actual value mean value generation / n_act mean val

SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, ENC

Can be changed: C2(4)	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** EDS, p0140	**Func. diagram:** -
P-Group: Encoder	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	20	0

Description: Sets the number of current controller sampling times for mean value generation of the speed actual value.

Note: Value = 0, 1: No mean value generation.
Higher values also mean higher dead times for the speed actual value.

p4686[0...n] Zero mark minimum length / ZM min length

SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, ENC

Can be changed: C2(4)	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** EDS, p0140	**Func. diagram:** -
P-Group: Encoder	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	10	1

Description: Sets the minimum length for the zero mark in 1/4 encoder pulses.

Dependency: Refer to: p0425, p0437

Note: The minimum length of the zero mark must be less than the zero mark distance (p4686 < p0425).
The parameter is activated using p0437.1 = 1 (zero mark edge detection).

p4688[0...2] CO: Zero mark monitoring differential pulse count / ZM diff_pulse qty

SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: Integer32	**Dyn. index:** -	**Func. diagram:** -
P-Group: -	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-2147483648	2147483647	0

Description: Display and connector output for the identified incorrect pulses in lines.

Also see p0437.7 (do not accumulate number of incorrect pulses).

Index: [0] = Encoder 1
[1] = Encoder 2
[2] = Encoder 3

Dependency: Refer to: p0437, p4681, p4682, p4683, p4684

Note: The display can only be reset to zero.

p4688 CO: Zero mark monitoring differential pulse count / ZM diff_pulse qty

ENC

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: Integer32	**Dyn. index:** -	**Func. diagram:** -
P-Group: -	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-2147483648	2147483647	0

Description: Display and connector output for the identified incorrect pulses in lines.

Also see p0437.7 (do not accumulate number of incorrect pulses).

Dependency: Refer to: p0437, p4681, p4682, p4683, p4684

Note: The display can only be reset to zero.

r4689[0...2] CO: Squarewave encoder diagnostics / Sq-wave enc diag

SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC

Can be changed: -	**Calculated:** -	**Access level:** 4
Data type: Unsigned32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Encoder	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the encoder status according to PROFIdrive for a squarewave encoder.

Index: [0] = Encoder 1
[1] = Encoder 2
[2] = Encoder 3

Dependency: Refer to: A31422

Note: After alarm A3x422 is output, this parameter is set for 100 ms.

r4689 CO: Squarewave encoder diagnostics / Sq-wave enc diag

ENC

Can be changed: -	**Calculated:** -	**Access level:** 4
Data type: Unsigned32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Encoder	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the encoder status according to PROFIdrive for a squarewave encoder.

Dependency: Refer to: A31422

Note: After alarm A3x422 is output, this parameter is set for 100 ms.

p4690 SMI spare part component number / SMI comp_no

CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410

Can be changed: T	**Calculated:** -	**Access level:** 1
Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** -
P-Group: Displays, signals	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	399	0

Description: Sets the component number for the SMI/DQI for which motor and/or encoder data should be saved, deleted or downloaded.

Dependency: Refer to: p4691, p4692, p4693

Note: DQI: DRIVE-CLiQ Sensor Integrated

SMI: SINAMICS Sensor Module Integrated

p4691 SMI spare part save/download data / Save/DL SMI data

CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410

Can be changed: T	**Calculated:** -	**Access level:** 1
Data type: Integer16	**Dyn. index:** -	**Func. diagram:** -
P-Group: Displays, signals	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	39	0

Description: Setting for the saving/downloading/deletion of motor and/or encoder data for the component specified in p4690 (SMI/DQI).

A backup of this data can be saved to non-volatile memory. The backup procedure is performed automatically as part of the function for saving to non-volatile memory (p0977 = 1 or "Copy RAM to ROM"). If a part is replaced, the saved data can be reloaded.

Procedure:

p4690 = set component number

p4691 = 1, 2, 30: Set the required procedure (save/download/delete).

p4691 = 9, 10, 36: Feedback signal on successful completion of the procedure.

p4691 = 11... 22, 37, 38: Error values if the procedure could not be executed successfully.

Value:
0: Inactive
1: Save SMI data
2: Download SMI data
9: SMI data downloaded and POWER ON required for component
10: SMI data backup complete
11: SMI data backup for selected component not found
12: Selected component not available or not connected
13: Insufficient memory space for backup
14: Format of saved data is incompatible
15: Transfer fault during data download
16: Transfer fault during data backup
17: Data backup does not match parameterized encoder/motor
18: Data backup directory not permissible
19: Component already contains data
20: Component does not contain any data
21: Component is not an SMI or a DQI
22: SMI data cannot be downloaded for component
30: Delete SMI data
35: Confirmation of SMI data delete required
36: SMI data deleted and POWER ON required for component
37: Access level not sufficient for delete
38: Delete SMI data not permitted for component
39: SMI data for component cannot be deleted

Dependency: Refer to: p4690, p4692, p4693

Notice: Once SMI/DQI data has been deleted or downloaded successfully, the component has to be switched on (POWER ON).

Note: SMI: SINAMICS Sensor Module Integrated
DQI: DRIVE-CLiQ Sensor Integrated
Help for error value = 11:
- Save the data for the original SMI on the memory card.
- Use an SMI with a suitable hardware version.
Help for error value = 12:
- set the correct component number or connect the component.
Help for error value = 13:
- Use a memory card with more memory space.
Help for error value = 14:
- Create a data backup on the memory card corresponding to the SMI type.
Help for error value = 15:
- check the DRIVE-CLiQ wiring for the component.
Remedy for fault value = 16:
- check the DRIVE-CLiQ wiring for the component.
Help for error value = 17:
- Save the data for the original SMI on the memory card.
Remedy for fault value = 18:
- set parameter p4693 to an appropriate value.
Remedy for fault value = 19:
- Perform an SMI delete or use a blank SMI.
Remedy for fault value = 20:
- Use an SMI that is not blank.
Remedy for fault value = 21:
- set the correct component number (p4690).
Note for error value = 22:
- Data cannot be downloaded for component.
Remedy for fault value = 35:
- Reset parameter p4691 to 30.
Remedy for fault value = 37:
- set the access level to Expert or higher.
Help for error value = 38:
- insert the SMI/DQI into the actual topology as an additional component (component number >= 200).
- set the component number from the actual topology (p4690 >= 200).
- set the correct component number (p4690 >= 200).
Note for error value = 39:
- SMI already deleted or too old. Delete not possible.

p4692 SMI spare part save data of all SMIs / Save SMI data

CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410

Can be changed: T	**Calculated:** -	**Access level:** 1
Data type: Integer16	**Dyn. index:** -	**Func. diagram:** -
P-Group: Displays, signals	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	29	0

Description: Setting to back up the data of all SMIs and DQIs featured in the target topology.

Value:
0: Inactive
1: Save data of all SMIs and DQIs
10: Save all data successful
13: Insufficient memory space for backup
16: Transfer fault during data backup
20: Component does not contain any data
29: Not all components from target topology saved

Note: SMI: SINAMICS Sensor Module Integrated

p4692 = 10: Automatic on successful completion of backup procedure.

p4692 = 13, 16, 20, 29: Error values if the procedure could not be executed successfully.

The procedure must be repeated if the data save operation was interrupted (e.g. if the power supply voltage failed).

Help for error value = 13:

- Use a memory card with more memory space.

Remedy for fault value = 16:

- check the DRIVE-CLiQ wiring.

Remedy for fault value = 20:

- Use an SMI that is not blank.

Help for error value = 29:

- check and correct the target and actual topologies for the SMIs.

- Repeat the save procedure.

p4693[0...1] SMI spare part data backup directory / SMI dat_bkup dir

CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** -
P-Group: Displays, signals	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	399	0

Description: Sets the directory for downloading and saving data.

Example:

The SMI has the component number 5 and the SMI data (motor/encoder data) is to be stored in subdirectory C205.

--> p4690 = 5, p4693[0] = 205, p4691 = 1

Index: [0] = Subdirectory selection
[1] = Reserved

Dependency: Refer to: p4691, r4694

Notice: If p4693[0] is not equal to 0 and p4693[0] is not equal to p4690, the following applies:

- Only a number >= 200 may be selected for the subdirectory when saving.

- in the case of downloads, a selection for the subdirectory may only be made for an SMI/DQI with a component number >= 200 (preliminary component number) (p4690 >= 200).

Note: DQI: DRIVE-CLiQ Sensor Integrated

SMI: SINAMICS Sensor Module Integrated

For index [0]:

This index is used to select the subdirectory for saving and downloading data. The motor article number (MLFB) of the corresponding data backup is displayed in r4694.

For p4693[0] = 0, the following applies:

The directory is determined by the setting of p4690.

r4694[0...19] SMI spare part data backup motor article number / SMI dat_bkup MLFB

CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned8	**Dyn. index:** -	**Func. diagram:** -
P-Group: Displays, signals	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the motor article number (MLFB) of the data backup selected with p4693.

Dependency: Refer to: p4691, p4692

Caution: If the selected subdirectory contains a number of data sets, "More Datasets" is displayed in r4694[0...19].

If there is no SMI data (motor/encoder data) in the selected subdirectory or if the selected subdirectory does not exist, the following applies:

- the number of the next subdirectory located is displayed.
- this subdirectory is not checked for valid SMI data.
- if another subdirectory cannot be located, nothing is displayed in r4694[0...19].

Note: SMI: SINAMICS Sensor Module Integrated

p4700[0...1] Trace control / Trace control

CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Integer16	**Dyn. index:** -	**Func. diagram:** -
P-Group: Trace and function generator	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 0
Min	**Max**	**Factory setting**
0	1	0

Description: Setting to control the trace function.

Value:
0: Stop trace
1: Start trace

Index:
[0] = Trace 0
[1] = Trace 1

p4701 Measuring function control / Meas fct ctrl

CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Integer16	**Dyn. index:** -	**Func. diagram:** -
P-Group: Trace and function generator	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 0
Min	**Max**	**Factory setting**
0	3	0

Description: Setting to control the measurement function.

Value:
0: Stop measuring function
1: Start measuring function
2: Measuring function check parameterization
3: Start measuring function without enable signals

p4703[0...1] Trace options / Trace options

CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** -
P-Group: Trace and function generator	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 0
Min	**Max**	**Factory setting**
-	-	0000 bin

Description: Sets the options for the trace.

Index:
[0] = Trace 0
[1] = Trace 1

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Automatically start trace with time slices	Yes	No	-

Dependency: Refer to: p4700

Note: For bit 00:

0: The trace starts with p4700 as before.

1: When powering up, the trace starts immediately with the saved parameter settings with the start of the time slices.

r4705[0...1] Trace status / Trace status

CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Integer16	**Dyn. index:** -	**Func. diagram:** -
P-Group: Trace and function generator	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 0
Min	**Max**	**Factory setting**
0	6	-

Description: Displays the actual status of the trace.

Value:
0: Trace inactive
1: Trace is recording presamples
2: Trace is waiting for trigger event
3: Trace is recording
4: Recording (trace) ended
5: Trace inactive with permissible configuration data
6: Trace inactive with inadmissible configuration data

Index:
[0] = Trace 0
[1] = Trace 1

r4706 Measuring function status / Meas fct status

CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Integer16	**Dyn. index:** -	**Func. diagram:** -
P-Group: Trace and function generator	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 0
Min	**Max**	**Factory setting**
0	5	-

Description: Displays the actual status of the measuring function.

Value:
0: Measurement function inactive
1: Measuring function parameterization checked
2: Measuring function waits for stabilizing time
3: Measuring function recording (tracing)
4: Measuring function trace ended with error
5: Measuring function trace successfully completed

p4707 Measurement function configuration / Meas fct config

CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Integer16	**Dyn. index:** -	**Func. diagram:** -
P-Group: Trace and function generator	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 0
Min	**Max**	**Factory setting**
0	1	0

Description: Setting to configure the measurement function.

Value:
0: Standard
1: Free measurement function

Dependency: The parameter cannot be changed when the measurement function has been started (r4706 = 2, 3).

Note: This parameter involves free measurement functions, and is only active for p4810 = 6.

For value = 0:

The free measuring function is parameterized with master control.

For value = 1:

The free measuring function is parameterized without master control.

r4708[0...1] Trace memory space required / Trace mem required

CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Trace and function generator	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 0
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the required memory in bytes for the actual parameterization.

Index:
[0] = Trace 0
[1] = Trace 1

Dependency: Refer to: r4799

r4709[0...1] Trace memory space required for measuring functions / Trace mem required

CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Trace and function generator	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 0
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the required memory in bytes for the actual parameterization.
This applies, if the trace for the measurement functions is used.

Index:
[0] = Trace 0
[1] = Trace 1

Dependency: Refer to: r4799

p4710[0...1] Trace trigger condition / Trace Trig_cond

CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Integer16	**Dyn. index:** -	**Func. diagram:** -
P-Group: Trace and function generator	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 0
Min	**Max**	**Factory setting**
1	8	2

Description: Sets the trigger condition for the trace.

Value:
1: Immediate trace start
2: Positive edge
3: Negative edge
4: Entry to hysteresis band
5: Leaving hysteresis band
6: Trigger at bit mask
7: Start with function generator
8: Trigger at bit mask with edge

Index:
[0] = Trace 0
[1] = Trace 1

p4711[0...5] Trace trigger signal / Trace trig_signal

CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Trace and function generator	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 0
Min	**Max**	**Factory setting**
-	-	0

Description: Selects the trigger signal for the trace.

Index:
[0] = Trace 0 parameter in BICO format
[1] = Trace 1 parameter in BICO format
[2] = Trace 0 PINx with DO Id and chart Id
[3] = Trace 0 PINx with block Id and PIN Id
[4] = Trace 1 PINy with DO Id and chart Id
[5] = Trace 1 PINy with block Id and PIN Id

Dependency: Only effective when p4710 does not equal 1.

Note: It only makes sense to trace the PINs using the commissioning tool.

For index 2(4) and 3(5) equal to zero, index 0(1) can only be written and vice versa.

For index [0...1]:

Here, the trigger signal for trace 0 or 1 is entered as parameter in the BICO format.

For trace with a physical address (p4789), the data type of the trigger signal is set here.

For index [2...3]:

The triggering PIN for trace 0 is entered here.

Index 2 bit 31 ... 16: Number of the Drive Object (DO), bit 15 ... 0: Number of the chart

Index 3 bit 31 ... 16: Number of the block, bit 15 ... 0: Number of the PIN

For index [4...5]:

The triggering PIN for trace 1 is entered here.

Index 4 bit 31 ... 16: Number of the Drive Object (DO), bit 15 ... 0: Number of the chart

Index 5 bit 31 ... 16: Number of the block, bit 15 ... 0: Number of the PIN

p4712[0...1] Trace trigger threshold / Trace trig_thresh

CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Trace and function generator	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 0
Min	**Max**	**Factory setting**
-340.28235E36	340.28235E36	0.00

Description: Sets the trigger threshold for the trace.

Index:
[0] = Trace 0
[1] = Trace 1

Dependency: Only effective when p4710 = 2, 3.

p4713[0...1] Trace tolerance band trigger threshold 1 / Trace trig thr 1

CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Trace and function generator	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 0
Min	**Max**	**Factory setting**
-340.28235E36	340.28235E36	0.00

Description: Sets the first trigger threshold for trigger via tolerance band.

Index:
[0] = Trace 0
[1] = Trace 1

Dependency: Only effective when p4710 = 4, 5.

p4714[0...1] Trace tolerance band trigger threshold 2 / Trace trig thr 2

CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Trace and function generator	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 0
Min	**Max**	**Factory setting**
-340.28235E36	340.28235E36	0.00

Description: Sets the second trigger threshold for trigger via tolerance band

Index: [0] = Trace 0
[1] = Trace 1

Dependency: Only effective when p4710 = 4, 5.

p4715[0...1] Trace bit mask trigger, bit mask / Trace trig mask

CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Trace and function generator	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 0
Min	**Max**	**Factory setting**
0	4294967295	0

Description: Sets the bit mask for the bit mask trigger.

Index: [0] = Trace 0
[1] = Trace 1

Dependency: Only effective when p4710 = 6 or p4710 = 8.

p4716[0...1] Trace bit mask trigger trigger condition / Trace Trig_cond

CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Trace and function generator	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 0
Min	**Max**	**Factory setting**
0	4294967295	0

Description: Sets the trigger condition for bit mask trigger.

Index: [0] = Trace 0
[1] = Trace 1

Dependency: Only effective when p4710 = 6.

p4717 Measuring function number of averaging operations / Meas fct avg qty

CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Unsigned8	**Dyn. index:** -	**Func. diagram:** -
P-Group: Trace and function generator	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 0
Min	**Max**	**Factory setting**
0	255	0

Description: Sets the number of averaging operations for the measuring function.

p4718 Measuring function number of stabilizing periods / MeasFct StabPerQty

CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Unsigned8	**Dyn. index:** -	**Func. diagram:** -
P-Group: Trace and function generator	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 0
Min	**Max**	**Factory setting**
0	255	0

Description: Sets the number of stabilizing periods for the measuring function.

r4719[0...1] Trace trigger index / Trace Trig_index

CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Trace and function generator	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 0
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the trigger index in the trace buffer.
The trigger event occurred at this point.

Index: [0] = Trace 0
[1] = Trace 1

Dependency: Only valid when p4705 = 4.

p4720[0...1] Trace recording cycle / Trace record_cyc

CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Trace and function generator	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 0
Min	**Max**	**Factory setting**
0.000 [ms]	60000.000 [ms]	1.000 [ms]

Description: Sets the recording cycle for the trace.

Index: [0] = Trace 0
[1] = Trace 1

p4721[0...1] Trace recording time / Trace record_time

CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Trace and function generator	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 0
Min	**Max**	**Factory setting**
0.000 [ms]	340.28235E36 [ms]	1000.000 [ms]

Description: Sets the recording time for the trace.

Index: [0] = Trace 0
[1] = Trace 1

p4722[0...1] Trace trigger delay / Trace trig_delay

CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Trace and function generator	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 0
Min	**Max**	**Factory setting**
-340.28235E36 [ms]	340.28235E36 [ms]	0.000 [ms]

Description: Sets the trigger delay for the trace.

Trigger delay < 0:

Pretrigger: Tracing (recording) starts the selected time before the trigger event actually occurs.

Trigger delay > 0:

Post trigger: Tracing does not start until the set time after the trigger event.

Index: [0] = Trace 0
[1] = Trace 1

p4723[0...1] Trace time slice cycle / Trace cycle

CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410

Can be changed: U, T	**Calculated:** -	**Access level:** 3

Description: Displays the trace buffer (record buffer) for trace 0 and signal 0.

The trace (record) buffer is sub-divided into memory banks, each containing 16384 values. Parameter p4795 can be used to toggle between the individual banks.

Example A:

The first 16384 values of signal 0, trace 0 are to be read out.

In this case, memory bank 0 is set with p4795 = 0. The first 16384 values can now be read out using r4740[0] to r4740[16383].

Example B:

The values 16385 to 32768 from signal 0, trace 0 are to be read out.

In this case, memory bank 1 is set with p4795 = 1. The values can now be read out in r4740[0] to r4740[16383].

Dependency: Refer to: p4795

Description: Displays the trace buffer (record buffer) for trace 0 and signal 0 as integer number.

Note: For signals, data type I32 or U32, the trace buffer is assigned as follows:

r4760[0] = value 0

r4760[1] = value 1

...

r4760[8191] = value 8191

For signals, data type I16 or U16, the trace buffer is assigned as follows:

r4760[0] = value 1 (bit 31 ... 16) and value 0 (bit 15 ... 0)

r4760[1] = value 3 (bit 31 ... 16) and value 2 (bit 15 ... 0)

...

r4760[8191] = value 16383 (bit 31 ... 16) and value 16382 (bit 15 ... 0)

For signals, data type I8 or U8, the trace buffer is assigned as follows:

r4760[0] = value 3 (bit 31 ... 24) value 2 (bit 23 ... 16) value 1 (bit 15 ... 8) value 0 (bit 7 ... 0)

r4760[1] = value 7 (bit 31 ... 24) value 6 (bit 23 ... 16) value 5 (bit 15 ... 8) value 4 (bit 7 ... 0)

...

r4760[8191] = value 32767 (bit 31 ... 24) value 32766 (bit 23 ... 16) value 32765 (bit 15 ... 8) value 32764 (bit 7 ... 0)

	Not for motor type: -	**Scaling:** -	**Expert list:** 0
	Min	**Max**	**Factory setting**
	-	-	-

Description: Displays the recorded data type 8 for the trace.

Index:
[0] = Trace 0
[1] = Trace 1

p4795 Trace memory bank changeover / Trace mem changeov

CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Trace and function generator	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 0
Min	**Max**	**Factory setting**
0	500	0

Description: Changes over the memory bank to read out the contents of the trace buffer.

Dependency: Refer to: r4740, r4741, r4742, r4743, r4750, r4751, r4752, r4753

r4797[0...1] Trace 0 trigger instant / Trace 0 t_trigger

CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Trace and function generator	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 0
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the instant in time for fulfilling the trigger condition for trace recorder 0.

The time comprises milliseconds (index 0) and days (index 1).

Index: [0] = Milliseconds
[1] = Days

Dependency: Refer to: r2114, r3102, r4719

Notice: The accuracy of the trigger instant depends on the accuracy of the underlying basis time.

For clarification:

The trigger instant is calculated with a µs accuracy. If the underlying basis time is only available with ms accuracy, then as a result of rounding effects, an inaccuracy of 1 ms can occur.

When referred to r4719, the trigger instant can therefore deviate somewhat.

Note: If the time calculation of the drive can be synchronized with a higher-level control, then this time can be taken from the actual UTC time (r3102). Otherwise, the time is based on the system runtime (r2114).

r4798[0...1] Trace 1 trigger instant / Trace 1 t_trigger

CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Trace and function generator	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 0
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the instant in time for fulfilling the trigger condition for trace recorder 1.

The time comprises milliseconds (index 0) and days (index 1).

Index: [0] = Milliseconds
[1] = Days

Dependency: Refer to: r2114, r3102, r4719

Notice: The accuracy of the trigger instant depends on the accuracy of the underlying basis time.

For clarification:

The trigger instant is calculated with a µs accuracy. If the underlying basis time is only available with ms accuracy, then as a result of rounding effects, an inaccuracy of 1 ms can occur.

When referred to r4719, the trigger instant can therefore deviate somewhat.

Note: If the time calculation of the drive can be synchronized with a higher-level control, then this time can be taken from the actual UTC time (r3102). Otherwise, the time is based on the system runtime (r2114).

r4799 Trace memory location free / Trace mem free

CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Trace and function generator	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 0
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the free memory for the trace in bytes.

Dependency: Refer to: r4708

p4800 Function generator control / FG control

CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Integer16	**Dyn. index:** -	**Func. diagram:** -
P-Group: Trace and function generator	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 0
Min	**Max**	**Factory setting**
0	3	0

Description: The function generator is started with p4800 = 1.

The signal is only generated for a 1 signal of binector input p4819.

Value:
0: Stop function generator
1: Start function generator
2: Check function generator parameterization
3: Start function generator without enable signals

Dependency: Refer to: p4819

r4805 Function generator status / FG status

CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Integer16	**Dyn. index:** -	**Func. diagram:** -
P-Group: Trace and function generator	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 0
Min	**Max**	**Factory setting**
0	6	-

Description: Displays the actual status of the function generator.

Value:
0: Inactive
1: Generate accelerating ramp to offset
2: Generate parameterized signal shape
3: Generate brake ramp
4: Function generator stopped due to missing enable signals
5: Function generator waits for BI: p4819
6: Function generator parameterization has been checked

Dependency: Refer to: p4800, p4819

r4806.0 BO: Function generator status signal / FG status signal

CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Trace and function generator	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 0
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the status of the function generator.

0 signal: Function generator inactive

1 signal: Function generator running

Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	Bit 0	ON	OFF	-

p4810 Function generator mode / FG operating mode

CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Integer16	**Dyn. index:** -	**Func. diagram:** -
P-Group: Trace and function generator	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 0
Min	**Max**	**Factory setting**
0	99	0

Description: Sets the operating mode of the function generator.

Value:
0: Connection at connector output r4818
1: Connection at current setpoint after filter and r4818
2: Connection as disturbing torque and r4818
3: Connection at speed setpoint after filter and r4818
4: Connection at current setpoint before filter and r4818
5: Connection at speed setpoint before filter and r4818
6: Connection for free measurement function r4818 and r4834
99: Connection at physical address and r4818

p4812 Function generator physical address / FG phys address

CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Trace and function generator	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 0
Min	**Max**	**Factory setting**
0	4294967295	0

Description: Sets the physical address where the function generator is to be connected.

Dependency: Only effective when p4810 = 99.

p4813 Function generator physical address reference value / FG phys addr ref

CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Trace and function generator	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 0
Min	**Max**	**Factory setting**
1.00	1000000.00	1.00

Description: Sets the reference value for 100 % for referred inputs.

Dependency: Only effective when p4810 = 99.

p4815[0...2] Function generator drive number / FG drive number

CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** -
P-Group: Trace and function generator	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 0
Min	**Max**	**Factory setting**
0	65535	0

Description: Selects the required drive where the function generator is to be connected.

Index:
[0] = First drive for connection
[1] = Second drive for connection
[2] = Third drive for connection

Dependency: Only effective when p4810 = 1, 2, 3, 4 or 5.

Note: For the function generator, only type SERVO, VECTOR or DC_CTRL type drives can be used.

p4816 Function generator output signal integer number scaling / FG outp integ scal

CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410

Can be changed: U, T	**Calculated:** -	**Access level:** 4
Data type: Integer32	**Dyn. index:** -	**Func. diagram:** -
P-Group: -	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-2147483648	2147483647	0

Description: Sets the scaling for the integer number of the output signal for the function generator.

Dependency: Refer to: r4805, r4817

Note: The parameter can only be changed in the following operating states:

r4805 = 0, 4, 6

r4817 CO: Function generator output signal integer number / FG outp integ no.

CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410

Can be changed: -	**Calculated:** -	**Access level:** 4
Data type: Integer32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Trace and function generator	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 0
Min	**Max**	**Factory setting**
-	-	-

Description: Display and connector output for the integer number of the output signal for the function generator.

Dependency: Refer to: p4816

Note: The value is output independent of the function generator operating mode.

r4818 CO: Function generator output signal / FG outp_sig

CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Trace and function generator	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** PERCENT	**Expert list:** 0
Min	**Max**	**Factory setting**
- [%]	- [%]	- [%]

Description: Displays the output signal for the function generator.

Dependency: Refer to: p4810

Note: The value is displayed independently of the function generator mode.

p4819 BI: Function generator control / FG control

CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32 / Binary	**Dyn. index:** -	**Func. diagram:** -
P-Group: Trace and function generator	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 0
Min	**Max**	**Factory setting**
-	-	1

Description: Sets the signal source to control the function generator.

When the function generator is running, signal generation is stopped with binector p4819 = 0 signal and p4800 is set = 0.

Dependency: Refer to: p4800

p4820 Function generator signal shape / FG signal shape

CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Integer16	**Dyn. index:** -	**Func. diagram:** -
P-Group: Trace and function generator	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 0
Min	**Max**	**Factory setting**
1	5	1

Description: Sets the signal to be generated for the function generator.

Value:
1: Square-wave
2: Staircase
3: Delta
4: Binary noise - PRBS (Pseudo Random Binary Signal)
5: Sine-wave

p4821 Function generator period / FG period duration

CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Trace and function generator	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 0
Min	**Max**	**Factory setting**
0.00 [ms]	60000.00 [ms]	1000.00 [ms]

Description: Sets the period of the signal to be generated for the function generator.

Dependency: Ineffective when p4820 = 4 (PRBS).

p4822 Function generator pulse width / FG pulse width

CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Trace and function generator	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 0
Min	**Max**	**Factory setting**
0.00 [ms]	60000.00 [ms]	500.00 [ms]

Description: Sets the pulse width for the signal to be generated for the function generator.

Dependency: Only effective when p4820 = 1 (square-wave).

p4823 Function generator bandwidth / FG bandwidth

CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Trace and function generator	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 0
Min	**Max**	**Factory setting**
0.0025 [Hz]	16000.0000 [Hz]	4000.0000 [Hz]

Description: Sets the bandwidth for the signal to be generated for the function generator.

Dependency: Only effective when p4820 = 4 (PRBS).

Refer to: p4830

Refer to: A02041

p4824 Function generator amplitude / FG amplitude

CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Trace and function generator	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 0
Min	**Max**	**Factory setting**
-1600.00 [%]	1600.00 [%]	5.00 [%]

Description: Sets the amplitude for the signal to be generated for the function generator.

Dependency: Units are dependent on p4810.

If p4810 = 1, 2, 4: The amplitude is referred to p2002 (reference current).

If p4810 = 3, 5: The amplitude is referred to p2000 (reference speed).

p4825 Function generator 2nd amplitude / FG 2nd amplitude

CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Trace and function generator	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 0
Min	**Max**	**Factory setting**
-1600.00 [%]	1600.00 [%]	7.00 [%]

Description: Sets the second amplitude for the signal to be generated for the function generator.

Dependency: Only effective for p4820 = 2 (staircase).

Units are dependent on p4810.

If p4810 = 1, 2, 4: The amplitude is referred to p2002 (reference current).

If p4810 = 3, 5: The amplitude is referred to p2000 (reference speed).

p4826 Function generator offset / FG offset

CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Trace and function generator	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 0
Min	**Max**	**Factory setting**
-1600.00 [%]	1600.00 [%]	0.00 [%]

Description: Sets the offset (DC component) of the signal to be generated for the function generator.

Dependency: Units are dependent on p4810.

If p4810 = 1, 2, 4: The offset is referred to p2002 (reference current).

If p4810 = 3, 5: The offset is referred to p2000 (reference speed).

If p4810 = 2: In order to avoid the undesirable effects of play (backlash), the offset does not act on the current setpoint, but instead on the speed setpoint.

p4827 Function generator ramp-up time to offset / FG ramp-up offset

CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Trace and function generator	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 0
Min	**Max**	**Factory setting**
0.00 [ms]	100000.00 [ms]	32.00 [ms]

Description: Sets the ramp-up time to the offset for the function generator.

p4828 Function generator lower limit / FG lower limit

CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Trace and function generator	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 0
Min	**Max**	**Factory setting**
-10000.00 [%]	0.00 [%]	-100.00 [%]

Description: Sets the lower limit for the function generator.

Dependency: For p4810 = 2 the limit only applies to the current setpoint, but not the speed setpoint (offset).

p4829 Function generator upper limit / FG upper limit

CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Trace and function generator	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 0
Min	**Max**	**Factory setting**
0.00 [%]	10000.00 [%]	100.00 [%]

Description: Sets the upper limit for the function generator.

Dependency: For p4810 = 2 the limit only applies to the current setpoint, but not the speed setpoint (offset).

p4830 Function generator time slice cycle / FG time slice

CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Trace and function generator	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 0
Min	**Max**	**Factory setting**
0.03125 [ms]	2.00000 [ms]	0.12500 [ms]

Description: Sets the time slice cycle in which the function generator is called.

p4831 Function generator amplitude scaling / FG amplitude scal

CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Trace and function generator	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 0
Min	**Max**	**Factory setting**
0.00000 [%]	200.00000 [%]	100.00000 [%]

Description: Sets the scaling for the amplitude of the signal waveforms for all output channels.
The value can be changed while the function generator is running.

p4832[0...2] Function generator amplitude scaling / FG amplitude scal

CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Trace and function generator	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 0
Min	**Max**	**Factory setting**
-340.28235E36 [%]	340.28235E36 [%]	100.00000 [%]

Description: Sets the scaling for the amplitude of the signal waveforms separately for each output channel.
The value cannot be changed while the function generator is running.

Index:	[0] = First drive for connection [1] = Second drive for connection [2] = Third drive for connection

p4833[0...2] Function generator offset scaling / FG offset scal

CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Trace and function generator	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 0
Min	**Max**	**Factory setting**
-340.28235E36 [%]	340.28235E36 [%]	100.00000 [%]

Description: Sets the scaling for the offset of the signal waveforms separately for each output channel.

The value cannot be changed while the function generator is running.

Index:
[0] = First drive for connection
[1] = Second drive for connection
[2] = Third drive for connection

r4834[0...4] CO: Function generator free measurement output signal / FG fr MeasFct outp

CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Trace and function generator	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** PERCENT	**Expert list:** 0
Min	**Max**	**Factory setting**
- [%]	- [%]	- [%]

Description: Displays the output signal for the free measurement function.

Index:
[0] = Signal 1
[1] = Signal 2
[2] = Signal 3
[3] = Signal 4
[4] = Signal 5

Dependency: Refer to: p4810

Note: The signals are only output in the "free measurement function" operating mode (p4810 = 6)

p4835[0...4] Function generator free measurement function scaling / FG fr MeasFct scal

CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Trace and function generator	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 0
Min	**Max**	**Factory setting**
-200.00000 [%]	200.00000 [%]	100.00000 [%]

Description: Sets the scaling of the output signals for the free measurement function.

Index:
[0] = Signal 1
[1] = Signal 2
[2] = Signal 3
[3] = Signal 4
[4] = Signal 5

Note: The parameter cannot be changed when the measurement function has been started (r4706 = 2, 3).

p4840[0...1] MTrace cycle number setting / Cycle number

CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Trace and function generator	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 0
Min	**Max**	**Factory setting**
0	4294967295	0

Description: Sets the number of cycles of a multiple trace.

The multiple trace is deactivated with a value = 0.

The multiple trace is permanently activated for a value >= 100000.

Index: [0] = Trace 0
[1] = Trace 1

Dependency: Refer to: r4841, p4844

Refer to: A02097, A02098

Notice: A multiple trace can have a negative impact on the total system performance.

From their inherent principle of operation, flash memory cards are subject to wear as a result of write operations. As a consequence, the lifetime of flash memory cards is reduced when using the multiple trace functionality.

r4841[0...1] MTrace cycle actual display / Cycle act display

CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Trace and function generator	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 0
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the currently running cycle (including deadtime) of the multiple trace.

Index: [0] = Trace 0
[1] = Trace 1

Dependency: Refer to: p4840, p4844

p4844[0...1] MTrace ring buffer files number / Ring buff file qty

CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** -
P-Group: Trace and function generator	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 0
Min	**Max**	**Factory setting**
10	10	10

Description: Sets the number of ring buffer files for the measurement results of the multiple trace.

Index: [0] = Trace 0
[1] = Trace 1

Dependency: Refer to: p4840, r4841

r4899 Status word sequence control / ZSW seq_ctrl

TM41

Can be changed: -	**Calculated:** -	**Access level:** 2
Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** -
P-Group: Displays, signals	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the status word of the sequence control from Terminal Module 41 (TM41).

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Ready for switching on	Yes	No	-
01	Ready	Yes	No	-
02	Operation enabled	Yes	No	-
03	Fault present	Yes	No	-

Can be changed: -	**Calculated:** -	**Access level:** 4
Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** -
P-Group: OEM range	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	288	-

Description: Displays the total length of the identifier of the Technology Extension installed on this drive object.

Dependency: Refer to: r4950, r4952, r4955, p4956, r4957, r4958, r4959, r4960

Note: The identifier of a Technology Extension comprises a maximum of 8 characters plus separator.

TEC: Technology Extension

r4952 TEC DO-specific GUID total length / TEC DO GUID length

All objects

Can be changed: -	**Calculated:** -	**Access level:** 4
Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** -
P-Group: OEM range	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	576	-

Description: Displays the total length of the GUIDs of the Technology Extensions installed on this drive object.

Dependency: Refer to: r4950, r4951, r4955, p4956, r4957, r4958, r4959, r4960

Note: The GUID of a Technology Extension comprises 16 characters plus 1 character major information plus 1 character, minor information.
GUID: Globally Unique IDentifier
TEC: Technology Extension

r4955[0...n] TEC DO-specific identifier / TEC DO ident

All objects

Can be changed: -	**Calculated:** -	**Access level:** 4
Data type: Unsigned8	**Dyn. index:** r4951	**Func. diagram:** -
P-Group: OEM range	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the identifier of the Technology Extensions installed on this drive object.
r4955[0...8]: Identifier of Technology Extension 1
r4955[9...17]: Identifier of Technology Extension 2, ...

Dependency: Refer to: r4950, r4951, r4952, p4956, r4957, r4958, r4959, r4960

Notice: This parameter is only indexed if at least one drive object-specific Technology Extension exists (p4950 > 0).

Note: TEC: Technology Extension

p4956[0...n] TEC DO-specific activation / TEC DO act

All objects

Can be changed: C1, T	**Calculated:** -	**Access level:** 4
Data type: Integer16	**Dyn. index:** r4950	**Func. diagram:** -
P-Group: OEM range	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	1	0

Description: Setting to activate the Technology Extensions installed on this drive object.
r4956[0]: Activation of Technology Extension 1
r4956[1]: Activation of Technology Extension 2, ...

Value:
0: Technology Extension inactive
1: Technology Extension active

Dependency: Refer to: r4950, r4951, r4952, r4955, r4957, r4958, r4959, r4960

Notice: This parameter is only indexed if at least one drive object-specific Technology Extension exists (p4950 > 0).

Note: TEC: Technology Extension

r4957[0...n] TEC DO-specific version / TEC DO Version

All objects

Can be changed: -	**Calculated:** -	**Access level:** 4
Data type: Unsigned32	**Dyn. index:** r4950	**Func. diagram:** -
P-Group: OEM range	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	4294967295	-

Description: Displays the version of the Technology Extensions installed on this drive object.
r4957[0]: Version of Technology Extension 1
r4957[1]: Version of Technology Extension 2, ...

Dependency: Refer to: r4950, r4951, r4952, r4955, p4956, r4958, r4959, r4960

Notice: This parameter is only indexed if at least one drive object-specific Technology Extension exists (p4950 > 0).

Note: TEC: Technology Extension
Example:
The value 1010100 should be interpreted as V01.01.01.00.

r4958[0...n] TEC DO-specific interface version / TEC DO interf_vers

All objects	**Can be changed:** -	**Calculated:** -	**Access level:** 4
	Data type: Unsigned32	**Dyn. index:** r4950	**Func. diagram:** -
	P-Group: OEM range	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	-	-	-

Description: Displays the interface version of Technology Extensions installed on this drive object.
r4958[0]: Interface version of Technology Extension 1
r4958[1]: Interface version of Technology Extension 2, ...

Dependency: Refer to: r4950, r4951, r4952, r4955, p4956, r4957, r4959, r4960

Notice: This parameter is only indexed if at least one drive object-specific Technology Extension exists (p4950 > 0).

Note: TEC: Technology Extension
Example:
The value 1010100 should be interpreted as V01.01.01.00.

r4959[0...n] TEC DO-specific GUID / TEC DO GUID

All objects	**Can be changed:** -	**Calculated:** -	**Access level:** 4
	Data type: Unsigned8	**Dyn. index:** r4952	**Func. diagram:** -
	P-Group: OEM range	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	-	-	-

Description: Displays the GUIDs of the Technology Extensions installed on this drive object.
r4959[0...15]: GUID of Technology Extension 1
r4959[16]: Major information of Technology Extension 1
r4959[17]: Minor information of Technology Extension 1
r4959[18...33]: GUID of Technology Extension 2
r4959[34]: Major information of Technology Extension 2
r4959[35]: Minor information of Technology Extension 2, ...

Dependency: Refer to: r4950, r4951, r4952, r4955, p4956, r4957, r4958, r4960

Notice: This parameter is only indexed if at least one drive object-specific Technology Extension exists (p4950 > 0).

Note: TEC: Technology Extension

r4960[0...n] TEC DO-specific GUID drive object / TEC DO GUID DO

All objects	**Can be changed:** -	**Calculated:** -	**Access level:** 4
	Data type: Unsigned8	**Dyn. index:** r4952	**Func. diagram:** -
	P-Group: OEM range	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	-	-	-

Description: Displays the GUIDs of this drive object of the Technology Extensions installed on the memory card/device memory.
r4960[0...15]: GUID of this drive object of Technology Extension 1
r4960[16]: Major information of this drive object of Technology Extension 1
r4960[17]: Minor information of this drive object of Technology Extension 1
r4960[18...33]: GUID of this drive object of Technology Extension 2
r4960[34]: Major information of this drive object of Technology Extension 2
r4960[35]: Minor information of this drive object of Technology Extension 2, ...

Dependency: Refer to: r4950, r4951, r4952, r4955, p4956, r4957, r4958, r4959

Notice: This parameter is only indexed if at least one drive object-specific Technology Extension exists (p4950 > 0).

Note: TEC: Technology Extension

p4961[0...n] TEC DO-specific logbook module selection / TEC DO log module

All objects	**Can be changed:** T	**Calculated:** -	**Access level:** 4
	Data type: Unsigned32	**Dyn. index:** r4950	**Func. diagram:** -
	P-Group: OEM range	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0000 hex	FFFF FFFF hex	0000 hex

Description: Only for service purposes.

Note: TEC: Technology Extension

r4975 TEC invalid number / TEC inval qty

CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	**Can be changed:** -	**Calculated:** -	**Access level:** 4
	Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** -
	P-Group: OEM range	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	-	-	-

Description: Displays the number of invalid Technology Extensions installed on the memory card/device memory.

Dependency: Refer to: r4976, r4978, r4979

Note: TEC: Technology Extension

r4976 TEC invalid identifier total length / TEC inval ID tot_l

CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	**Can be changed:** -	**Calculated:** -	**Access level:** 4
	Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** -
	P-Group: OEM range	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	-	-	-

Description: Displays the total length of the IDs of all the invalid Technology Extensions installed on the memory card/device memory.

Dependency: Refer to: r4975, r4978, r4979

Note: TEC: Technology Extension

The identifier of an invalid Technology Extension comprises a maximum of 8 characters plus separator.

r4978[0...n] TEC invalid identifier / TEC inval ID

CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	**Can be changed:** -	**Calculated:** -	**Access level:** 4
	Data type: Unsigned8	**Dyn. index:** r4976	**Func. diagram:** -
	P-Group: OEM range	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	-	-	-

Description: Displays the IDs of all the invalid Technology Extensions installed on the memory card/device memory.

r4978[0...8]: Identifier of invalid Technology Extension 1

r4978[9...17]: Identifier of invalid Technology Extension 2, ...

Dependency: Refer to: r4975, r4976, r4979

Notice: This parameter is only indexed if at least one invalid Technology Extension exists (p4975 > 0).

Note: TEC: Technology Extension

r4979[0...n] TEC invalid error code / TEC inv error code

CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410

Can be changed: -	**Calculated:** -	**Access level:** 4
Data type: Unsigned32	**Dyn. index:** r4975	**Func. diagram:** -
P-Group: OEM range	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the error code of the invalid Technology Extensions installed on the memory card/device memory.

r4979[0]: error code from Technology Extension 1

r4979[1]: error code from Technology Extension 2, ...

Dependency: Refer to: r4975, r4976, r4978

Notice: This parameter is only indexed if at least one invalid Technology Extension exists (p4975 > 0).

Note: TEC: Technology Extension

The value in the error code must be interpreted in binary form. The bits have the following meaning:

Bit 00: Incompatible version of the TEC interface.

Bit 01: Technology Extension could not be loaded.

Bit 02: Incorrect description files.

Bit 03: Technology Extension does not define a CPU type.

Bit 04: Technology Extension for this device not available (incorrect CPU type).

Bit 05: Technology Extension for this device not available (incorrect type ID).

Bit 06: Incorrect description files (Const/Startup incompatible).

Bit 07: Number range of the Technology Extension overlaps with the number range of another Technology Extension

Bit 08: No compatible custom interface was found.

Bit 09: The custom interface defined by the Technology Extension already exists.

Bit 10: The version of the System Technology Extension differs from the SINAMICS firmware version.

r4985 TEC number / TEC qty

CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410

Can be changed: -	**Calculated:** -	**Access level:** 4

Description: Displays the version of all the Technology Extensions installed on the memory card/device memory.

r4989[0]: Version of Technology Extension 1

r4989[1]: Version of Technology Extension 2, ...

Dependency: Refer to: r4985, r4986, r4987, r4988, r4990, r4991, r4992, r4993, r4994

Notice: This parameter is only indexed if at least one Technology Extension exists (p4985 > 0).

Note: TEC: Technology Extension

Example:

The value 1010100 should be interpreted as V01.01.01.00.

r4990[0...n] TEC interface version / TEC interf_vers

CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410

Can be changed: -	**Calculated:** -	**Access level:** 4
Data type: Unsigned32	**Dyn. index:** r4985	**Func. diagram:** -
P-Group: OEM range	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the interface version of all the Technology Extensions installed on the memory card/device memory.

r4990[0]: Interface version of Technology Extension 1

r4990[1]: Interface version of Technology Extension 2, ...

Dependency: Refer to: r4985, r4986, r4987, r4988, r4989, r4991, r4992, r4993, r4994

Notice: This parameter is only indexed if at least one Technology Extension exists (p4985 > 0).

Note: TEC: Technology Extension

Example:

The value 1010100 should be interpreted as V01.01.01.00.

r4991[0...n] TEC GUID / TEC GUID

CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410

Can be changed: -	**Calculated:** -	**Access level:** 4
Data type: Unsigned8	**Dyn. index:** r4987	**Func. diagram:** -
P-Group: OEM range	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the GUIDs of all the Technology Extensions installed on the memory card/device memory.

r4991[0...15]: GUID of Technology Extension 1

r4991[16]: Major information of Technology Extension 1

r4991[17]: Minor information of Technology Extension 1

r4991[18...33]: GUID of Technology Extension 2

r4991[34]: Major information of Technology Extension 2

r4991[35]: Minor information of Technology Extension 2, ...

Dependency: Refer to: r4985, r4986, r4987, r4988, r4989, r4990, r4992, r4993, r4994

Notice: This parameter is only indexed if at least one Technology Extension exists (p4985 > 0).

Note: TEC: Technology Extension

r4992[0...n] TEC GUID ES / TEC GUID ES

CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410

Can be changed: -	**Calculated:** -	**Access level:** 4
Data type: Unsigned8	**Dyn. index:** r4987	**Func. diagram:** -
P-Group: OEM range	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the GUIDs of all the Technology Extensions installed on the memory card/device memory.

r4992[0...15]: GUID of Technology Extension 1

r4992[16]: Major information of Technology Extension 1

r4992[17]: Minor information of Technology Extension 1

r4992[18...33]: GUID of Technology Extension 2

r4992[34]: Major information of Technology Extension 2

r4992[35]: Minor information of Technology Extension 2, ...

Dependency: Refer to: r4985, r4986, r4987, r4988, r4989, r4990, r4991, r4993, r4994

Notice: This parameter is only indexed if at least one Technology Extension exists (p4985 > 0).

Note: TEC: Technology Extension

r4993[0...n] TEC activation status / TEC act stat

CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410

Can be changed: -	**Calculated:** -	**Access level:** 4
Data type: Integer16	**Dyn. index:** r4985	**Func. diagram:** -
P-Group: OEM range	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	1	-

Description: Displays the activation status of the Technology Extensions installed on the memory card/device memory.

r4993[0]: Activation of Technology Extension 1

r4993[1]: Activation of Technology Extension 2, ...

Value:
0: Technology Extension inactive
1: Technology Extension active

Dependency: Refer to: r4985, r4986, r4987, r4988, r4989, r4990, r4991, r4992, r4994

Notice: This parameter is only indexed if at least one Technology Extension exists (p4985 > 0).

Note: TEC: Technology Extension

r4994[0...n] TEC properties / TEC property

CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410

Can be changed: -	**Calculated:** -	**Access level:** 4

Min	**Max**	**Factory setting**
-	-	-

Description: Displays the properties supported by the spindle hardware and status.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Spindle functionality available	Yes	No	-
01	Sensor S1 available	Yes	No	-
04	Sensor S4 available	Yes	No	-
05	Sensor S5 available	Yes	No	-
06	Sensor S6 available	Yes	No	-
10	State machine enabled	Yes	No	-
11	Parameter p5043 changed	State 2	State 1	-

Note: This display value is contained in the manufacturer-specific telegram 139 (SP_CONFIG).
For bit 11:
After each change in p5043[0...6] the signal level of this bit is changed.

r5001 CO: Spindle clamp state / Clamp state

SERVO (Spin_diag), SERVO_AC (Spin_diag)

Can be changed: -	**Calculated:** -	**Access level:** 1
Data type: Integer16	**Dyn. index:** -	**Func. diagram:** -
P-Group: -	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	11	-

Description: Display and connector output for the clamped state.
Message A3x940 is output in states 2 and 11.
The voltage threshold values for the states can be set using parameter p5041. The hysteresis is adapted using parameter p5040.
The transition from state 4 to states 7, 8 or 10 can be influenced by the wait time p5042[0].
A transition is made into state 10 if the analog value in p5002 falls below the voltage threshold value in p5041[4]. However, if the analog value p5002 lies below the voltage threshold value in p5041[2] and the wait time in p5042[0] has expired, then a transition is made into state 7 or 8 - otherwise state 4 is kept.

Value:
0: System being initialized
1: State being initialized
2: Released with message
3: Released without message
4: Clamping
5: Releasing
6: Releasing without tool
7: Clamped with tool (S4 inactive)
8: Clamped with tool (S4 active)
9: Clamping without tool
10: Clamped without tool
11: Clamped with message

Dependency: Refer to: r5002, r5003, p5040, p5041, p5042

Note: This display value is contained in the manufacturer-specific telegram 139 (SP_ZSW).

r5002 CO: Spindle analog sensor S1 measured value / Ana_sensS1 MeasVal

SERVO (Spin_diag), SERVO_AC (Spin_diag)

Can be changed: -	**Calculated:** -	**Access level:** 1
Data type: Integer16	**Dyn. index:** -	**Func. diagram:** -
P-Group: -	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Display and connector output for the measured value from analog sensor S1 (1 increment = 1 mV).

Note: This display value is contained in the manufacturer-specific telegram 139 (SP_XIST_A).

r5003 CO: Spindle digital sensors status / Dig_sens status

SERVO (Spin_diag), SERVO_AC (Spin_diag)

Can be changed: -	**Calculated:** -	**Access level:** 1
Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** -
P-Group: -	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Display and connector output for the status of the digital sensors.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
04	Sensor S4 piston end position reached	Yes	No	-
05	Sensor S5 axis position OK	Yes	No	-
06	Sensor S6 reserved	-	-	-

Note: This display value is contained in the manufacturer-specific telegram 139 (SP_XIST_D).

r5004 CO: Spindle supplementary value / Spindle suppl_val

SERVO (Spin_diag), SERVO_AC (Spin_diag)

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Integer16	**Dyn. index:** -	**Func. diagram:** -
P-Group: -	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Display and connector output for the measured value from sensor S5 (1 increment = 1 mV).

Note: This display value is contained in the manufacturer-specific telegram 139.

r5005 Spindle file system status / File sys stat

SERVO, SERVO_AC, SERVO_I_AC

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** -	**Func. diagram:** -
P-Group: -	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the status for the file system on the non-volatile memory.

The individual result data and characteristic data are summarized in a corresponding file.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
01	Result data clamping cycle thresholds available	Yes	No	-
02	Result data clamping cycle counter available	Yes	No	-
03	Result data operating hours counter available	Yes	No	-
04	Result data temperature diagnostics available	Yes	No	-
05	Result data real time clock synchronization available	Yes	No	-

Bit	Signal name	1 signal	0 signal	FP
06	Result data speed/torque matrix available	Yes	No	-
10	Result data collision detection available	Yes	No	-
11	Result data system detection available	Yes	No	-
16	Characteristic data spindle available	Yes	No	-
17	Characteristic data clamping cycle counter available	Yes	No	-
19	Characteristic data operating hours counter available	Yes	No	-
20	Characteristic data temperature diagnostics available	Yes	No	-
22	Characteristic data speed/torque matrix available	Yes	No	-
30	Characteristic data sensor description available	Yes	No	-
31	Characteristic data sensor calibration data available	Yes	No	-

Note: This parameter can only be used in conjunction with a Sensor Module Integrated 24 (SMI24).

p5007 Spindle file system selection / File sys select

SERVO, SERVO_AC, SERVO_I_AC

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** -	**Func. diagram:** -
P-Group: -	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0000 0000 0000 0000 0000 0000 0000 0000 bin

Description: Sets the files to adapt the file system.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
01	Result data clamping cycle thresholds selected	Yes	No	-
02	Result data clamping cycle counter selected	Yes	No	-
03	Result data operating hours counter selected	Yes	No	-
04	Result data temperature diagnostics selected	Yes	No	-
05	Result data real time clock synchronization selected	Yes	No	-
06	Result data speed/torque matrix selected	Yes	No	-
10	Result data collision detection selected	Yes	No	-
11	Result data system detection selected	Yes	No	-
17	Characteristic data clamping cycle counter selected	Yes	No	-
19	Characteristic data operating hours counter selected	Yes	No	-
20	Characteristic data temperature diagnostics selected	Yes	No	-
22	Characteristic data speed/torque matrix selected	Yes	No	-

Note: This parameter can only be used in conjunction with a Sensor Module Integrated 24 (SMI24).

The action to adapt the selected files is selected in p5009.

For bit 01:

The action selected in p5009 only becomes immediately effective for this bit.

For bit 02 ... 22:

Only for internal Siemens use.

For these bits, after setting p5009 a hardware reset is required.

p5009 Adapt spindle file system / Adapt file sys

SERVO, SERVO_AC, SERVO_I_AC

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: Integer16	**Dyn. index:** -	**Func. diagram:** -
P-Group: -	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	53	0

Description: Setting to adapt the file system on the non-volatile memory.

Example:

The result data "clamping cycle thresholds" are available (r5005.1 = 1) and should be reset.

--> set p5007.1 = 1: select result data "clamping cycle thresholds".

--> set p5009 = 1: initiate "reset" function for the file selected in p5007.

--> p5009 = 40: feedback signal during "operation running".

--> p5009 = 20: feedback signal for a successfully completed operation.

--> p5009 = 51 ... 53: fault values if the operation was not able to be successfully completed.

--> carry out a POWER ON (switch-off/switch-on).

Value:

0: No function
1: Reset
2: Set invalid
3: Reserved
5: Set valid
20: Operation successfully completed.
40: Operation running
51: Function not supported
52: File access unsuccessful
53: Operation unsuccessful

Note: This parameter can only be used in conjunction with a Sensor Module Integrated 24 (SMI24).

Help for fault value = 51 ... 53:

- repeat the operation.

r5012 Spindle Sensor Module properties / SM properties

SERVO (Spin_diag), SERVO_AC (Spin_diag)

Can be changed: -	**Calculated:** -	**Access level:** 4
Data type: Unsigned32	**Dyn. index:** -	**Func. diagram:** -
P-Group: -	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the Sensor Module Integrated 24 (SMI24) properties.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Display diagnostics stamp in UTC	Yes	No	-
01	Clamping state counter extended	Yes	No	-
02	Release times display available	Yes	No	-
03	Release times available	Yes	No	-

p5016 Enable spindle commissioning / Enable comm

SERVO, SERVO_AC, SERVO_I_AC

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: Integer16	**Dyn. index:** -	**Func. diagram:** -
P-Group: All groups	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	1	0

Description: Setting to enable/inhibit spindle commissioning.

Enabling spindle commissioning results in the spindle parameters being reset after commissioning has been initiated (e.g. via p0340 > 0 or p3900 > 0).

Depending on the spindle configuration, the following parameters are reset:

p0353, p0410, p0431, p0922, p1231, p1300, p1980, p1981, p1982

Value:
0: Spindle commissioning enabled
1: Spindle commissioning inhibited

Dependency: Refer to: p0340, p3900

Note: This parameter can only be used in conjunction with a Sensor Module Integrated 24 (SMI24).

The parameter is automatically set to a value of 1 after exiting commissioning (p0009 = 0).

p5019 Spindle password / Password

CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** -
P-Group: -	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Sets the password for the spindle diagnostics write parameters.

Number range for spindle diagnostics:

5000 ... 5169

Note: This parameter can only be used in conjunction with a Sensor Module Integrated 24 (SMI24).

r5020 Spindle manufacturer / Manufacturer

SERVO (Spin_diag), SERVO_AC (Spin_diag)

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Integer16	**Dyn. index:** -	**Func. diagram:** -
P-Group: -	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	48	-

Description: Displays the spindle manufacturer.

Value:
0: Unknown
1: Siemens AG Automation and Drives
32: Reserved
33: Reserved
48: WEISS Spindeltechnologie GmbH

r5021[0...18] Spindle article number / Article No.

SERVO (Spin_diag), SERVO_AC (Spin_diag)

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned8	**Dyn. index:** -	**Func. diagram:** -
P-Group: -	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the article number (MFLB) or drawing number of the spindle.

Notice: An ASCII table (excerpt) can be found, for example, in the appendix to the List Manual.

r5022[0...15] Spindle serial number / Serial No.

SERVO (Spin_diag), SERVO_AC (Spin_diag)

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned8	**Dyn. index:** -	**Func. diagram:** -
P-Group: -	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the spindle serial number.

Notice: An ASCII table (excerpt) can be found, for example, in the appendix to the List Manual.

r5023 Spindle production date / Prod_date

SERVO (Spin_diag), SERVO_AC (Spin_diag)

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** -	**Func. diagram:** -
P-Group: -	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the production date of the spindle.

Note: Format: yyyymmdd

r5032 Maximum spindle speed / n_max

SERVO (Lin, Spin_diag), SERVO_AC (Lin, Spin_diag), SERVO_I_AC (Lin, Spin_diag)

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: -	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
- [m/min]	- [m/min]	- [m/min]

Description: Displays the maximum spindle speed.

Note: The highest possible (maximum) speed is set using p1082 (p1082 <= r5032).

r5032 Maximum spindle speed / n_max

SERVO (Spin_diag), SERVO_AC (Spin_diag), SERVO_I_AC (Spin_diag)

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: -	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
- [rpm]	- [rpm]	- [rpm]

Description: Displays the maximum spindle speed.

Note: The highest possible (maximum) speed is set using p1082 (p1082 <= r5032).

r5033 Spindle angular commutation offset / Commut_ang_off

SERVO (Spin_diag), SERVO_AC (Spin_diag)

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: -	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
- [°]	- [°]	- [°]

Description: Displays the angular commutation offset for the spindle encoder.

Note: When exiting commissioning, the value is transferred into p0431.

r5034 Spindle current controller sampling time maximum / I_ctrl t_samp max

SERVO (Spin_diag), SERVO_AC (Spin_diag)

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: -	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
- [µs]	- [µs]	- [µs]

Description: Displays the maximum recommended sampling time for the spindle current controller.
The current controller sampling time must be set greater than the value in p0112 or p0115[0].
For r5034 < p0115[0], alarm A07140 is output.

Dependency: Refer to: A07140

p5040 Spindle voltage threshold values tolerance / U_thresh tol

SERVO (Spin_diag), SERVO_AC (Spin_diag)

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: -	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.0 [mV]	1000.0 [mV]	0.0 [mV]

Description: Sets the voltage tolerance for the voltage threshold values.
The tolerance acts symmetrically around the individual voltage threshold values (p5041[0...5]).

Dependency: Refer to: r5001, r5002, p5041

p5041[0...5] Spindle voltage threshold values / U_thresh

SERVO (Spin_diag), SERVO_AC (Spin_diag)

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: -	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.0 [mV]	340.28235E36 [mV]	0.0 [mV]

Description: Sets the voltage threshold values for the spindle.

Index:
[0] = Released (upper limit)
[1] = Released (lower limit)
[2] = Clamped with tool (upper limit)
[3] = Clamped with tool (lower limit)
[4] = Clamped without tool (upper limit)
[5] = Clamped without tool (lower limit)

Dependency: Refer to: r5001, r5002, p5040

Note: Only values can be entered, which do not overlap, taking into consideration the set tolerance (p5040).

p5042[0...1]	Spindle transition times / t_transition		
SERVO (Spin_diag), SERVO_AC (Spin_diag)	**Can be changed:** T	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
	P-Group: -	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0.0 [µs]	340.28235E36 [µs]	0.0 [µs]

Description: Sets the transition times for the clamping state machine of the spindle.

For index [0]:

Sets the maximum time for staying in the state r5001 = 4, before a transition is made to state r5001 = 10 or 7/8.

A higher value can force a direct transition from state r5001 = 4 to 10 without passing through the states r5001 = 7/8 and 9.

For index [1]:

Sets the maximum time for clamping without tool (see clamping operations inside and outside the tolerance in p5045).

Index: [0] = Stabilization time for "clamped with tool"
[1] = Maximum time to clamp

Dependency: Refer to: r5001, r5002

Note: The input is limited to a maximum value of 20 seconds.

p5043[0...6]	Spindle speed limits / n_limits		
SERVO (Lin, Spin_diag), SERVO_AC (Lin, Spin_diag), SERVO_I_AC (Lin, Spin_diag)	**Can be changed:** T	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
	P-Group: -	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min	**Max**	**Factory setting**
	0.0 [m/min]	65535.0 [m/min]	0.0 [m/min]

Description: Sets the speed limits for the clamping state machine of the spindle.

For index [0]:

Valid for state r5001 = 3.

For index [1]:

Valid for state r5001 = 4.

For index [2]:

Valid for state r5001 = 5.

For index [3]:

Valid for state r5001 = 6.

For index [4]:

Valid for state r5001 = 7/8.

For index [5]:

Valid for state r5001 = 9.

For index [6]:

Valid for state r5001 = 10.

Index: [0] = Released
[1] = Clamping
[2] = Releasing from the state "clamped with tool"
[3] = Releasing from the state "clamped without tool"
[4] = Clamped with tool
[5] = Clamping without tool
[6] = Clamped without tool

Dependency: Refer to: r5001

Note: For state r5001 = 0, 1, 2 or 11, the fixed speed limit 0 applies.

p5043[0...6] Spindle speed limits / n_limits

SERVO (Spin_diag), SERVO_AC (Spin_diag), SERVO_I_AC (Spin_diag)

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: -	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.0 [rpm]	65535.0 [rpm]	0.0 [rpm]

Description: Sets the speed limits for the clamping state machine of the spindle.

For index [0]:

Valid for state r5001 = 3.

For index [1]:

Valid for state r5001 = 4.

For index [2]:

Valid for state r5001 = 5.

For index [3]:

Valid for state r5001 = 6.

For index [4]:

Valid for state r5001 = 7/8.

For index [5]:

Valid for state r5001 = 9.

For index [6]:

Valid for state r5001 = 10.

Index:
[0] = Released
[1] = Clamping
[2] = Releasing from the state "clamped with tool"
[3] = Releasing from the state "clamped without tool"
[4] = Clamped with tool
[5] = Clamping without tool
[6] = Clamped without tool

Dependency: Refer to: r5001

Note: For state r5001 = 0, 1, 2 or 11, the fixed speed limit 0 applies.

r5044 Maximum permissible spindle velocity limit / Spin v_lim MaxPerm

SERVO (Lin, Spin_diag), SERVO_AC (Lin, Spin_diag), SERVO_I_AC (Lin, Spin_diag)

Can be changed: -	**Calculated:** -	**Access level:** 1
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: -	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
- [m/min]	- [m/min]	- [m/min]

Description: Displays the maximum permissible velocity limit.

Dependency: Refer to: r5001, p5043

Note: Currently, the velocity limit is only displayed for the state "clamped without tool".

The velocity limit set in p5043[6] is effective.

Value = 65535: velocity limit not active.

r5044 Maximum permissible spindle speed limit / Spin n_lim MaxPerm

SERVO (Spin_diag), SERVO_AC (Spin_diag), SERVO_I_AC (Spin_diag)

Can be changed: -	**Calculated:** -	**Access level:** 1
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: -	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
- [rpm]	- [rpm]	- [rpm]

Description: Displays the maximum permissible speed limit.

Dependency: Refer to: r5001, p5043

Note: Currently, the speed limit is only displayed for the state "clamped without tool".

The speed limit set in p5043[6] is effective.

Value = 65535: speed limit not active.

r5170[0...5] HF phase current actual values / HF I_ph act val

SERVO, SERVO_AC, SERVO_I_AC

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Displays, signals	**Unit group:** 6_5	**Unit selection:** p0505
Not for motor type: -	**Scaling:** p2002	**Expert list:** 1
Min	**Max**	**Factory setting**
- [A]	- [A]	- [A]

Description: Displays the measured phase currents as peak value.

Index:
[0] = Phase U motor current
[1] = Phase V motor current
[2] = Phase W motor current
[3] = Phase U capacitor current
[4] = Phase V capacitor current
[5] = Phase W capacitor current

Dependency: Refer to: r0069

Note: HF: High Frequency Drive

For index [0...2]:

The 3 motor phase currents are displayed.

For index [3...5]:

The currents in the filter capacitors of the 3 phases are displayed.

r5171 CO: HF damping voltage actual value / HF U_damp act val

SERVO, SERVO_AC, SERVO_I_AC

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Displays, signals	**Unit group:** 5_2	**Unit selection:** p0505
Not for motor type: -	**Scaling:** p2001	**Expert list:** 1
Min	**Max**	**Factory setting**
- [V]	- [V]	- [V]

Description: Displays the actual value of the damping voltage.

Dependency: Refer to: F37002

Note: HF: High Frequency Drive

r5172[0...3] CO: HF temperatures / HF temp

SERVO, SERVO_AC, SERVO_I_AC

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -

P-Group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
1	2	1

Description: Sets current setpoint filter 5 as lowpass filter (PT2) or general 2nd order filter.

Value:
1: PT2 low pass
2: General 2nd order filter

Dependency: Current setpoint filter 5 is activated via p5200.0 and parameterized via p5202 ... p5205.

Note: For a general 2nd order filter, by inserting the same natural frequency in both the numerator and in the denominator, i.e. bandstop frequency, a bandstop filter is implemented. If the numerator damping of zero is selected, the bandstop frequency is completely suppressed.

The denominator damping can be determined from the equation for the 3 dB bandwidth:

f_3dB bandwidth = 2 * D_denominator * f_bandstop frequency

Description: Sets the numerator damping for current actual value filter 7.

Dependency: The current actual value filter 7 is activated via p5200.2 and parameterized via p5212 ... p5215.

p5216[0...n] Current setpoint filter 8 type / I_set_filt 8 type

SERVO (Ext I_setp_filt), SERVO_AC (Ext I_setp_filt), SERVO_I_AC (Ext I_setp_filt)

Can be changed: U, T	**Calculated:** CALC_MOD_CON	**Access level:** 3
Data type: Integer16	**Dyn. index:** DDS, p0180	**Func. diagram:** 5711
P-Group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
1	2	1

Description: Sets current setpoint filter 8 as lowpass filter (PT2) or general 2nd order filter.

Value:
1: PT2 low pass
2: General 2nd order filter

Dependency: Current setpoint filter 8 is activated via p5200.3 and parameterized via p5217 ... p5220.

Note: For a general 2nd order filter, by inserting the same natural frequency in both the numerator and in the denominator, i.e. bandstop frequency, a bandstop filter is implemented. If the numerator damping of zero is selected, the bandstop frequency is completely suppressed.

The denominator damping can be determined from the equation for the 3 dB bandwidth:

f_3dB bandwidth = 2 * D_denominator * f_bandstop frequency

p5250[0...n] Compensation configuration / Comp config

SERVO (Cog_M_comp), SERVO_AC (Cog_M_comp), SERVO_I_AC (Cog_M_comp)

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Unsigned8	**Dyn. index:** DDS, p0180	**Func. diagram:** -
P-Group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0000 bin

Description: Sets the configuration of the cogging torque compensation.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Activate cogging torque compensation	Yes	No	-
01	Cogging torque compensation correction-dependent	Yes	No	-
02	Compensate periodic position error	Yes	No	-

Dependency: Refer to: p5252, p5253, r5254, r5255, p5256, p5260, p5261

Notice: After replacing the encoder and/or motor, the torque table of the cogging torque compensation must be learned again.

Note: For bit 01:

When the bit is set, a separate table is used for each direction of motion (p5260, p5261). Both directions must be learned.

When the bit is not set, one table is used for both directions of motion (p5260). Learning is only required in one direction.

p5251 Activate learn cogging torque compensation / Cog_M_comp_learn

SERVO (Cog_M_comp), SERVO_AC (Cog_M_comp), SERVO_I_AC (Cog_M_comp)

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Unsigned8	**Dyn. index:** -	**Func. diagram:** -
P-Group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0000 0000 bin

Description: Setting for activating/deactivating learning for cogging torque compensation.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Reactivate slow learning	Yes	No	-
01	Activate slow learning as supplement	Yes	No	-
02	Remove average value	Yes	No	-
04	Generate cogging torque table from frequency values	Yes	No	-

Dependency: Refer to: p5252, p5253, r5254, r5255, p5260

Notice: After replacing the encoder and/or motor, the torque table of the cogging torque compensation must be learned again.

p5252 Cogging torque compensation table length / Cog_M_comp length

SERVO (Cog_M_comp), SERVO_AC (Cog_M_comp), SERVO_I_AC (Cog_M_comp)

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: Unsigned8	**Dyn. index:** -	**Func. diagram:** -
P-Group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
6	12	10

Description: Sets the table length in bits for cogging torque compensation.

10 corresponds to 2^10 = 1024 values.

Dependency: Refer to: p5250, p5253, r5254, r5255, p5260

p5253 Cogging torque compensation periodicity factor / Cog_M_comp_period

SERVO (Cog_M_comp), SERVO_AC (Cog_M_comp), SERVO_I_AC (Cog_M_comp)

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.00000	32768.00000	1.00000

Description: Sets the factor for the periodicity for the cogging torque compensation.

For rotating motors, the reference value is one mechanical revolution, for linear motors, the pole pair width.

Dependency: Refer to: p5250, p5252, r5254, r5255, p5260

Note: For values < 1, several table periods are passed through for each mechanical revolution or pole pair width, for values > 1 several revolutions or pole pair widths are required for one table period.

The following must apply for endlessly rotating machines:

p0408 and p0408 * p5253 * 2^p0418 must have a power of two less than 2^24.

r5254[0...3] Cogging torque compensation diagnostics / Cog_M_comp diag

SERVO (Cog_M_comp), SERVO_AC (Cog_M_comp), SERVO_I_AC (Cog_M_comp)

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Integer16	**Dyn. index:** -	**Func. diagram:** -
P-Group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays diagnostics data for the cogging torque compensation.

Index:
[0] = Average values for slowly learning
[1] = Actual table index
[2] = Table index when starting learning
[3] = Table index when ending learning

Dependency: Refer to: p5250, p5252, p5253, r5255, p5260

Note: For index [0]:

Average values for slowly learning the cogging torque compensation. During learning, the average value is incremented by 1 for each table period passed.

For index [1]:

Currently used table index.

For index [2]:

Table index when starting slow learning.

For index [3]:

Table index when ending slow learning.

For index [2, 3]:

If the actual index when learning is decremented, then the table index at start and end is interchanged.

r5255[0...1] CO: Cogging torque compensation input/output / Cog_M_comp I/O

Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-180.00 [°]	180.00 [°]	0.00 [°]

Description: Angle to compensate periodic position errors for the error with two sinusoidal periods per mechanical revolution.

The value is determined with the motor data identification routine (p1960).

Dependency: Refer to: p5250, p5267

Note: Prerequisites:

- "Cogging torque compensation" function module activated (r0108.22 = 1).
- motor data identification carried out with transfer (p1959.0 = 1, p1960 = 1).
- compensation periodic position errors activated (p5250.2 = 1).
- encoder with absolute position information (unique zero mark, distance-coded zero marks, absolute encoder, 1-pole resolver, p5263.10).

p5271[0...n] Online / One Button Tuning configuration / Ot OBT config

SERVO (J_estimator, Lin), SERVO_AC (J_estimator, Lin), SERVO_I_AC (J_estimator, Lin)

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: Unsigned16	**Dyn. index:** DDS, p0180	**Func. diagram:** -
P-Group: -	**Unit group:** -	**Unit selection:** -
Not for motor type: REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0000 1100 bin

Description: Sets the configuration for online tuning / One Button Tuning.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	PD controller for large load moments of inertia	Yes	No	-
01	Reduce gain at low speeds	Yes	No	-
02	Load adaptation Kp	Yes	No	5045
03	Speed precontrol	Yes	No	5045
04	Torque precontrol	Yes	No	5045
05	Set maximum acceleration limiting	Yes	No	5045
06	Do not change Kp	Yes	No	-
07	Voltage feedforward control	Yes	No	-

Dependency: Refer to: p5272, p5273, r5274, p5275

Note: For bit 00:

For significant differences between the motor mass and load mass, or for low dynamic performance of the controller, then the P controller becomes a PD controller in the position control loop. As a consequence, the dynamic performance of the position controller is increased.

This function should only be set when the velocity precontrol (bit 3 = 1) or the force precontrol (bit 4 = 1) is active.

For bit 01:

At low velocities, the controller gain factors are automatically reduced in order to avoid noise and oscillation at standstill.

For bit 02:

The estimated load mass is taken into account for the velocity controller gain (see p5273).

For bit 03:

Activates the velocity precontrol for the basic positioner (EPOS).

For bit 04:

Activates the force precontrol for the basic positioner (EPOS).

For bit 05:

The maximum setpoint acceleration for the basic positioner (EPOS) is determined based on the estimated mass. This is only realized once by setting the bit.

Prerequisite:

The drive pulses are inhibited and the mass was previously determined.

For bit 06:

The velocity controller gain set in p1460 is not changed when calculating the controller data.

For bit 07:

Activation of the voltage precontrol.

P-Group: -	**Unit group:** -	**Unit selection:** -
Not for motor type: REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0000 1100 bin

Description: Sets the configuration for online tuning / One Button Tuning.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	PD controller for large load moments of inertia	Yes	No	-
01	Reduce gain at low speeds	Yes	No	-
02	Load adaptation Kp	Yes	No	5045
03	Speed precontrol	Yes	No	5045
04	Torque precontrol	Yes	No	5045
05	Set maximum acceleration limiting	Yes	No	5045
06	Do not change Kp	Yes	No	-
07	Voltage feedforward control	Yes	No	-

Dependency: Refer to: p5272, p5273, r5274, p5275

Note: For bit 00:

For significant differences between the motor moment of inertia and load moment of inertia - or for a low controller dynamic response - the P controller in the position control loop is transformed into a PD controller. As a consequence, the dynamic performance of the position controller is increased.

This function should only be set when the speed precontrol (bit 3 = 1) or the torque precontrol (bit 4 = 1) is active.

For bit 01:

At low speeds, the controller gain factors are automatically reduced in order to avoid noise and oscillation at standstill.

For bit 02:

The estimated load moment of inertia is taken into account for the speed controller gain (see p5273).

For bit 03:

Activates the speed precontrol for the basic positioner (EPOS).

For bit 04:

Activation of the torque precontrol for the basic positioner (EPOS), if this is not active, then the internal drive speed/torque precontrol is parameterized.

For bit 05:

The maximum setpoint acceleration for the basic positioner (EPOS) is determined based on the estimated moment of inertia. This is only realized once by setting the bit.

Prerequisite:

The drive pulses are inhibited and the moment of inertia was previously determined.

For bit 06:

The speed controller gain set in p1460 is not changed when calculating the controller data.

For bit 07:

Activation of the voltage precontrol.

Min	**Max**	**Factory setting**
- [ms]	- [ms]	- [ms]

Description: Display and connector output for the estimated dynamic response of the speed control loop as PT1 time constant for online tuning/One Button Tuning.

This position controller setting is required if the closed-loop position control is in an external control system.

Dependency: Refer to: p5271, p5272, p5273, p5275

p5275[0...n] Online / One Button Tuning dynamic response time constant / Ot dyn T

SERVO (J_estimator), SERVO_AC (J_estimator), SERVO_I_AC (J_estimator)

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** -
P-Group: -	**Unit group:** -	**Unit selection:** -
Not for motor type: REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.0 [ms]	60.0 [ms]	7.5 [ms]

Description: Sets the time constant for the precontrol symmetrization for online tuning / One Button Tuning.

As a consequence, the drive is allocated a defined, dynamic response via its precontrol.

For axes, which must interpolate with one another, the same value must be entered.

Examples:

0 ms = travel without following error (Kv factor is infinity)

5 ms = settling behavior as for PT1 with 5 ms (Kv factor = 12 [1000/min])

Dependency: Refer to: p5271, p5272, p5273, r5274

Note: This time constant is only effective if p5302.7 is set = 1.

Otherwise, the precontrol symmetrization is adapted to the estimated dynamic response, therefore setting positioning without any overshoot.

r5276[0...n] Online / One Button Tuning maximum Kv factor estimated / Ot Kv estimated

SERVO (J_estimator), SERVO_AC (J_estimator), SERVO_I_AC (J_estimator)

Can be changed: -	**Calculated:** -	**Access level:** 3

Min	**Max**	**Factory setting**
-1	1	0

Description: Sets the configuration for the adaptive current setpoint filter.

The adaptation acts on the filter set using p5281.

Value:
-1: Inactive and filter deactivated
0: Inactive
1: Active

Dependency: The prerequisite for the adaptation of the current setpoint filter is that the "Moment of inertia estimator" function module is activated (r0108.10).

Refer to: p5281, p5282, p5283, p5284, r5285

Notice: If, when activating adaptation (p5280 = 1), the filter assigned via p5281 is still not active, then it is automatically activated.

Note: If p5280 = -1:

The adaptation is deactivated and the assigned filter deactivated.

If p5280 = 0:

The adaptation is inactive. The actual setting of the filter parameters is kept in a volatile memory. To permanently save the values that have been determined, the parameters must be saved in a non-volatile memory (p0977 = 1).

If p5280 = 1:

The adaptation is active. When a mechanical resonant frequency is excited, the filter frequency is adapted. Adaptation is temporarily inactive while the function generator generates a noise signal (p4820 = 4).

p5281[0...n] Current setpoint filter adaptation assignment / Filt adapt assign

SERVO (J_estimator), SERVO_AC (J_estimator), SERVO_I_AC (J_estimator)

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Unsigned16	**Dyn. index:** DDS, p0180	**Func. diagram:** -
P-Group: -	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0	10	0

Description: Sets the current setpoint filter that is to be adapted.

Value = 0: No assignment

Value = 1: Current setpoint filter 1 assigned (basic system)

...

Value = 4: Current setpoint filter 4 assigned (basic system)

Value = 5: Current setpoint filter 5 assigned (function module, r0108.21)

...

Value = 10: Current setpoint filter 10 assigned (function module, r0108.21)

Dependency: Refer to: p5280, p5282, p5283, p5284, r5285

Refer to: F07419

Notice: Fault F07419 is output if this setting is changed when adaptation is active.

Note: If, when activating adaptation (p5280 = 1), the selected filter is still not active, then it is automatically activated.

p5282[0...n] Current setpoint filter adaptation limit frequency lower / Filt adapt f lower

SERVO (J_estimator), SERVO_AC (J_estimator), SERVO_I_AC (J_estimator)

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** -
P-Group: -	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
50 [Hz]	5000 [Hz]	250 [Hz]

Description: Sets the lower limit frequency for the current setpoint filter adaptation.

If the actual frequency of the adapted filter falls below the lower limit frequency, then the frequency of the adapted filter is set to the lower limit frequency. This limit is only effective when adaptation is active (p5280 = 1). If adaptation is not active, then this limit only becomes effective at the time of the next activation.

Dependency: Refer to: p5280, p5281, p5283, p5284, r5285

Note: If a value is entered which exceeds the upper limit frequency (p5283), then the value is rejected.

p5283[0...n] Current setpoint filter adaptation limit frequency upper / Filt adapt f upper

SERVO (J_estimator), SERVO_AC (J_estimator), SERVO_I_AC (J_estimator)

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** -
P-Group: -	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
200 [Hz]	10000 [Hz]	1500 [Hz]

Description: Sets the upper limit frequency for the current setpoint filter adaptation.

If the actual frequency of the adapted filter exceeds the upper limit frequency, then the frequency of the adapted filter is set to the upper limit frequency. This limit is only effective when adaptation is active (p5280 = 1). If adaptation is not active, then this limit only becomes effective at the time of the next activation.

There is an internal maximum value for the upper limit frequency; this depends on the damping (attenuation) of the adapted filter and the current controller sampling time.

If the parameterized value exceeds the internal maximum value, then the following applies:

- this parameter is immediately limited to the internal maximum value if adaptation is active.
- this parameter is limited to the internal maximum value the next time that adaptation is activated (p5280).

Dependency: Refer to: p5280, p5281, p5282, p5284, r5285

Note: If a value is entered which falls below the lower limit frequency (p5282), then the value is rejected.

p5284[0...n] Current setpoint filter adaptation activation threshold / Filt adapt thresh

SERVO (J_estimator), SERVO_AC (J_estimator), SERVO_I_AC (J_estimator)

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Func. diagram:** -
P-Group: -	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0 [%]	10000 [%]	100 [%]

Description: Sets the activation threshold for the current setpoint filter adaptation.

Dependency: Refer to: p5280, p5281, p5282, p5283, r5285

Note: The value should be increased if, in operation, the filter frequency continuously changes significantly although the resonance frequency does not change.

The value should be reduced if the filter frequency adaptation cannot be set so that mechanical resonance is suppressed.

r5285[0...n] Current setpoint filter adaptation actual frequency / Filt adapt act f

SERVO (J_estimator), SERVO_AC (J_estimator), SERVO_I_AC (J_estimator)

Can be changed: -	**Calculated:** -	**Access level:** 3

Not for motor type: REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0000 0000 0011 1001 bin

Description: Sets the configuration for the "FFT tuning" function.

This function is used for One Button Tuning (p5300 = 1).

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Noise excitation after pulse enable	Yes	No	-
01	Set current setpoint filter (HF)	Yes	No	-
02	Set speed controller gain (HF)	Yes	No	-
03	Length of FFT window bit 0 (LF, HF)	Yes	No	-
04	Length of FFT window bit 1 (LF, HF)	Yes	No	-
05	Windowing the time signals using a Hamming window (LF, HF)	Yes	No	-
06	Measure current controller	Yes	No	-
07	Bandwidth bit 0 (LF)	Yes	No	-
08	Bandwidth bit 1 (LF)	Yes	No	-
09	Bandwidth bit 2 (LF)	Yes	No	-
10	Measuring periods bit 0	Yes	No	-
11	Measuring periods bit 1	Yes	No	-
12	Inject noise onto speed setpoint	Yes	No	-
13	Do not reduce Kp for measurement	Yes	No	-
14	Current setpoint filter that inverts the control loop	Yes	No	-

Dependency: Refer to: r5293, r5294, r5295, p5296, p5297

Note: HF: high frequency

LF: low frequency

For bit 00:

A PRBS signal (pseudo random binary signal) is superimposed on the current setpoint to be able to better identify the mechanical controlled system.

For bit 01:

The identified mechanical resonance points are suppressed using current setpoint filters.

For bit 02:

The maximum velocity controller gain is determined from the identified mechanical controlled system.

For bits 03, 04:

The measured value buffer length is set using these bits:

Bit 04 = 0 and bit 03 = 0 -> buffer length = 256

Bit 04 = 0 and bit 03 = 1 -> buffer length = 512

Bit 04 = 1 and bit 03 = 0 -> buffer length = 1024

Bit 04 = 1 and bit 03 = 1 -> buffer length = 2048

For bit 05:

A Hamming window is used to filter the measured time signals.

For bit 06:

The measurement checks the current controller frequency characteristic. For high amplitudes in p5298, it is possible that the check is unsuccessful, as the converter reaches its voltage limit.

For bits 07, 08:

An aliasing filter is used for the measured values.

Bit 08 = 0 and bit 07 = 0 -> filter frequency = 50 Hz

Bit 08 = 0 and bit 07 = 1 -> filter frequency = 100 Hz

Bit 08 = 1 and bit 07 = 0 -> filter frequency = 200 Hz

Bit 08 = 1 and bit 07 = 1 -> filter frequency = 400 Hz

For bit 09:

Evaluation can be switched over from correlation to differential filter.

For bits 10, 11:

Number of measuring periods.

Bit 11 = 0 and bit 10 = 0 -> number of measurements = 1

Bit 11 = 0 and bit 10 = 1 -> number of measurements = 2

Bit 11 = 1 and bit 10 = 0 -> number of measurements = 4

Bit 11 = 1 and bit 10 = 1 -> number of measurements = 8

For bit 12:

The PRBS signal is switched to the velocity setpoint (in front of the filter).

For bit 13:

The input signal for the force actual value is taken from in front of the current setpoints filters.

p5291 FFT tuning configuration / FFT tun config

SERVO (J_estimator), SERVO_AC (J_estimator), SERVO_I_AC (J_estimator)	**Can be changed:** U, T	**Calculated:** -	**Access level:** 3
	Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** -

	Min	**Max**	**Factory setting**
	-	-	0000 0000 0011 1001 bin

Description: Sets the configuration for the "FFT tuning" function.

This function is used for One Button Tuning (p5300 = 1).

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Noise excitation after pulse enable	Yes	No	-
01	Set current setpoint filter (HF)	Yes	No	-
02	Set speed controller gain (HF)	Yes	No	-
03	Length of FFT window bit 0 (LF, HF)	Yes	No	-
04	Length of FFT window bit 1 (LF, HF)	Yes	No	-
05	Windowing the time signals using a Hamming window (LF, HF)	Yes	No	-
06	Measure current controller	Yes	No	-
07	Bandwidth bit 0 (LF)	Yes	No	-
08	Bandwidth bit 1 (LF)	Yes	No	-
09	Bandwidth bit 2 (LF)	Yes	No	-
10	Measuring periods bit 0	Yes	No	-
11	Measuring periods bit 1	Yes	No	-
12	Inject noise onto speed setpoint	Yes	No	-
13	Do not reduce Kp for measurement	Yes	No	-
14	Current setpoint filter that inverts the control loop	Yes	No	-

Dependency: Refer to: r5293, r5294, r5295, p5296, p5297

Note: HF: high frequency

LF: low frequency

For bit 00:

A PRBS signal (pseudo random binary signal) is superimposed on the current setpoint to be able to better identify the mechanical controlled system.

For bit 01:

The identified mechanical resonance points are suppressed using current setpoint filters.

For bit 02:

The maximum speed controller gain is determined from the identified mechanical controlled system.

For bits 03, 04:

The measured value buffer length is set using these bits:

Bit 04 = 0 and bit 03 = 0 -> buffer length = 256

Bit 04 = 0 and bit 03 = 1 -> buffer length = 512

Bit 04 = 1 and bit 03 = 0 -> buffer length = 1024

Bit 04 = 1 and bit 03 = 1 -> buffer length = 2048

For bit 05:

A Hamming window is used to filter the measured time signals.

For bit 06:

The current controller frequency response is determined when making the measurement and is taken into account for the speed controller loop. For high amplitudes in p5298, it is possible that the measurement is unsuccessful, as the converter reaches its voltage limit.

For bits 07, 08, 09:

The measurement bandwidth is set using these bits:

Bit 09 = 0, bit 08 = 0, bit 07 = 0 -> bandwidth = 50 Hz

Bit 09 = 0, bit 08 = 0, bit 07 = 1 -> bandwidth = 100 Hz

Bit 09 = 0, bit 08 = 1, bit 07 = 0 -> bandwidth = 200 Hz

Bit 09 = 0, bit 08 = 1, bit 07 = 1 -> bandwidth = 400 Hz

Bit 09 = 1, bit 08 = 0, bit 07 = 0 -> bandwidth = 800 Hz

Bit 09 = 1, bit 08 = 0, bit 07 = 1 -> bandwidth = 1600 Hz

For bits 10, 11:
Number of measuring periods.
Bit 11 = 0 and bit 10 = 0 -> number of measurements = 1
Bit 11 = 0 and bit 10 = 1 -> number of measurements = 2
Bit 11 = 1 and bit 10 = 0 -> number of measurements = 4
Bit 11 = 1 and bit 10 = 1 -> number of measurements = 8
For bit 12:
The PRBS signal is switched to the speed setpoint (in front of the filter).
For bit 13:
The input signal for the torque actual value is taken from in front of the current setpoints filters.

p5292 FFT tuning dynamic factor / FFT tun dyn_factor

SERVO (J_estimator, Lin), SERVO_AC (J_estimator, Lin), SERVO_I_AC (J_estimator, Lin)

Can be changed: U, T	**Calculated:** -	**Access level:** 2

Not for motor type: REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-210000.0000 [rpm]	210000.0000 [rpm]	0.0000 [rpm]

Description: Sets the speed offset for the motor.

The offset is intended to prevent non-linear effects, such as backlash or stiction from influencing the measured values

This function is used for One Button Tuning (p5300 = 1).

Recommendation: If the "Identify high frequencies" function (p5290 = 1) is used together with a TTL/HTL encoder, then the following applies to the offset speed (p5297):

p5297 > 15 / motor encoder pulse number / speed controller sampling time

p5297 = 15 / p0408 / p0115[1]

Dependency: Refer to: p5291

r5298 FFT tuning amplitude response / FFT tun ampl_resp

SERVO (J_estimator), SERVO_AC (J_estimator), SERVO_I_AC (J_estimator)

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Amplitude response of the speed control loop in dB (units rpm/Nm or m/min/N).

During the One Button Tuning function, 1024 measured values are generated, and are then output in the speed controller sampling time.

For p5301.0 = 1 or p5301.1 = 1, in the representation, a measured value corresponds to (1/p0115[1])/2048 in [Hz].

For p5301.4 = 1 or p5301.5 = 1 in the representation, a measured value corresponds to 250/2048 in [Hz].

A trigger condition is required to trace the measured values (e.g. amplitude response r5298 <> 0).

r5299 FFT tuning phase response / FFT tun ph_resp

SERVO (J_estimator), SERVO_AC (J_estimator), SERVO_I_AC (J_estimator)

Can be changed: -	**Calculated:** -	**Access level:** 3

P-Group: -	**Unit group:** -	**Unit selection:** -
Not for motor type: REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-1	2	0

Description: Sets activation/deactivation of the "auto tuning" function.

If p5300 = 1:

The "One button tuning" function is configured using p5301.

If p5300 = 2:

The "Online tuning" function is configured using p5302.

The following parameters are written to for the two functions:

p0430, p1160, p1400, p1413 - p1426, p1428, p1429, p1433 - p1435, p1441, p1460 - p1465, p1498, p1513, p1656 - p1676, p2533 - p2539, p2567, p2572, p2573, p5280

Value:
-1: Reset controller parameters
0: Inactive
1: One Button Tuning
2: Online tuning

Dependency: The prerequisite for the "auto tuning" function is that the "Moment of inertia estimator" function module is activated (r0108.10).

The "Autotuning" function can only be selected for "Servo" control mode with position encoder.

The motor must have already been commissioned so that autotuning functions error-free. A motor identification may be necessary beforehand (p1900 and following).

One Button Tuning:

p5301 configures the "One Button Tuning" function.

p5292 if the required dynamic response of the control loops is set.

p5308 is used to parameterize the traversing distance for the test signal.

Other relevant parameters: p5309, p5296, p5297, p5275, r5274, r5393, r5394, r5395

Online tuning:

p5302 configures the "Online tuning" function.

p5272 if the required dynamic response of the control loops is set.

Other relevant parameters: p5271, p5275, r5274

Refer to: p5271, p5272, p5273, r5274, p5275, p5292, r5293, r5294, r5295, p5296, p5297, p5301, p5302, p5308, p5309

Warning: Only the motor measuring system is taken into account when optimizing the position controller. If an external measuring system is used for the position control, then this can result in an unstable controller setting.

The "One Button Tuning" function does not support different sampling times for current and velocity controllers. For p0112 =2, in some instances different stability criteria are obtained. It is recommended that "One Button Tuning" is not used for this configuration.

Caution: For some drive trains, the "online tuning" function can result in unstable settings (motor makes a whistling sound). This is especially the case for large load masses that are connected to the motor through a low-frequency coupling/connection. In this case, parameter p5272 or p5273 must be reduced.

Note: If p5300 = -1:

Autotuning is deactivated, and p5300 is automatically set to 0. In addition, the default setting values for the velocity and position controller are restored.

If p5300 = 0:

Online tuning is inactive.

To permanently back up the values determined for the velocity controller and position controller, the parameters must be saved in a non-volatile fashion (p0977 = 1 or "Copy RAM to ROM").

The results of the moment of inertia estimator can be reset using p5300 = 0. After p5300 > 0, the parameters for moment of inertia and tuning must be determined again.

If p5300 = 1:

One Button Tuning is active.

The mass is determined once using a test signal. The controller parameters and current setpoint filters are additionally determined once using a noise signal as excitation source.

If p5300 = 2:

Online tuning is active.

The mass is estimated. The controller parameters are recalculated if the mass noticeably changes.

p5300[0...n] Autotuning selection / Autotuning select

SERVO (J_estimator), SERVO_AC (J_estimator), SERVO_I_AC (J_estimator)

Can be changed: T	**Calculated:** -	**Access level:** 2
Data type: Integer16	**Dyn. index:** DDS, p0180	**Func. diagram:** -
P-Group: -	**Unit group:** -	**Unit selection:** -
Not for motor type: REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-1	2	0

Description: Sets activation/deactivation of the "auto tuning" function.

If p5300 = 1:

The "One button tuning" function is configured using p5301.

If p5300 = 2:

The "Online tuning" function is configured using p5302.

The following parameters are written to for the two functions:

p0430, p1160, p1400, p1413 - p1426, p1428, p1429, p1433 - p1435, p1441, p1460 - p1465, p1498, p1513, p1656 - p1676, p2533 - p2539, p2567, p2572, p2573, p5280

Value:
-1: Reset controller parameters
0: Inactive
1: One Button Tuning
2: Online tuning

Recommendation: If p5300 = 1 "One Button Tuning" is used together with an TTL/HTL encoder, then the following applies:

Offset speed (p5297) > 15 / motor encoder pulse number / speed controller sampling time

p5297 > 15 / p0408 / p0115[2]

Dependency: The prerequisite for the "auto tuning" function is that the "Moment of inertia estimator" function module is activated (r0108.10).

The "Autotuning" function can only be selected for "Servo" control mode with position encoder.

The motor must have already been commissioned so that autotuning functions error-free. A motor identification may be necessary beforehand (p1900 and following).

One Button Tuning:

p5301 configures the "One Button Tuning" function.

p5292 if the required dynamic response of the control loops is set.

p5308 is used to parameterize the traversing distance for the test signal.

Other relevant parameters: p5309, p5296, p5297, p5275, r5274, r5393, r5394, r5395

Online tuning:

p5302 configures the "Online tuning" function.

p5272 if the required dynamic response of the control loops is set.

Other relevant parameters: p5271, p5275, r5274

Refer to: p5271, p5272, p5273, r5274, p5275, p5292, r5293, r5294, r5295, p5296, p5297, p5301, p5302, p5308, p5309

Warning: Only the motor measuring system is taken into account when optimizing the position controller. If an external measuring system is used for the position control, then this can result in an unstable controller setting.

The "One Button Tuning" function does not support different sampling times for current and speed controllers. For p0112 =2, in some instances different stability criteria are obtained. It is recommended that "One Button Tuning" is not used for this configuration.

Caution: For some drive trains, the "online tuning" function can result in unstable settings (motor makes a whistling sound). This is especially the case for high load moments of inertia, which are coupled to the motor through a low-frequency connection/coupling. In this case, the values in parameter p5272 or p5273 must be reduced.

Note: If p5300 = -1:

Autotuning is deactivated, and p5300 is automatically set to 0. In addition, the default setting values for the speed and position controller are restored.

If p5300 = 0:

Online tuning is inactive.

To permanently save the values determined for the speed and position controllers, the parameters must be saved in a non-volatile manner (p0977 = 1 or "copy RAM to ROM").

If p5300 = 1:

One Button Tuning is active.

The moment of inertia is determined once using a test signal. The controller parameters and current setpoint filters are additionally determined once using a noise signal as excitation source. The steps to be executed can be configured using p5301.

If p5300 = 2:

Online tuning is active.

The moment of inertia is estimated. The controller parameters are recalculated if the moment of inertia noticeably changes. The steps to be executed can be configured using p5302.

p5301[0...n] One Button Tuning configuration / OBT config

SERVO (J_estimator, Lin), SERVO_AC (J_estimator, Lin), SERVO_I_AC (J_estimator, Lin)

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** DDS, p0180	**Func. diagram:** -
P-Group: -	**Unit group:** -	**Unit selection:** -
Not for motor type: REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0000 0000 0000 0111 bin

Description: Setting the functions for One Button Tuning (p5300 = 1).

A test signal is required for some functions. Here, parameters p5307 to p5309 must be a taken into consideration.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Setting the proportional gain Kp	Yes	No	-
01	Setting current setpoint filter	Yes	No	-
02	Activating the moment of inertia estimator	Yes	No	-
04	Load oscillation detection	Yes	No	-
05	Suppress detected load oscillation	Yes	No	-
07	Activating synchronized axes	Yes	No	-
08	Moment of inertia determination from frequency response	Yes	No	-

Dependency: It is only possible to change the configuration if autotuning is not active (p5300 = 0).

Refer to: p5292, r5293, r5294, r5295, p5296, p5297, p5300, p5308, p5309

Note: For bit 00:

The velocity controller gain is determined and set using a noise signal.

For bit 01:

Possibly required current setpoint filters are determined and set using a noise signal.

As a consequence, a higher dynamic performance can be achieved in the velocity control loop.

For bit 02:

Using this bit, the mass is determined using a test signal. If this bit is not set, then the load mass must be manually set using parameter p1498. The test signal must have been previously set using parameters p5308 and p5309.

For bit 07:

With this function, these axes are adapted to the dynamic response set in p5275. This is necessary for interpolating axes. The time in p5275 should be set according to the axis with the lowest dynamic response.

p5301[0...n] One Button Tuning configuration / OBT config

SERVO (J_estimator), SERVO_AC (J_estimator), SERVO_I_AC (J_estimator)

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** DDS, p0180	**Func. diagram:** -
P-Group: -	**Unit group:** -	**Unit selection:** -
Not for motor type: REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0000 0000 0000 0111 bin

Description: Setting the functions for One Button Tuning (p5300 = 1).

A test signal is required for some functions. Here, parameters p5307 to p5309 must be a taken into consideration.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Setting the proportional gain Kp	Yes	No	-
01	Setting current setpoint filter	Yes	No	-
02	Activating the moment of inertia estimator	Yes	No	-
04	Load oscillation detection	Yes	No	-
05	Suppress detected load oscillation	Yes	No	-
07	Activating synchronized axes	Yes	No	-
08	Moment of inertia determination from frequency response	Yes	No	-

Dependency: It is only possible to change the configuration if autotuning is not active (p5300 = 0).

Refer to: p5292, r5293, r5294, r5295, p5296, p5297, p5300, p5308, p5309

Note: For bit 00:

The speed controller gain is determined and set using a noise signal.

For bit 01:

Possibly required current setpoint filters are determined and set using a noise signal.

As a consequence, a higher dynamic performance can be achieved in the speed control loop.

For bit 02:

Using this bit, the moment of inertia is determined using a test signal. If this bit is not set, then the load moment of inertia must be manually set using parameter p1498. The test signal must have been previously set using parameters p5308 and p5309.

For bit 04:

Using this bit, load oscillation detection is determined using a test signal. The traversing path must first be set using parameter p5308.

For bit 05:

Using this bit, load oscillation detection is determined using a test signal, and transferred to p3752. The precondition is function module "APC" (r0108.7 = 1) and p3700.2 = 1. After executing the function, APC must be activated via p3700.0 = 1. The traversing path must first be set using parameter p5308.

For bit 07:

With this function, these axes are adapted to the dynamic response set in p5275. This is necessary for interpolating axes. The time in p5275 should be set according to the axis with the lowest dynamic response.

For bit 08:

Using this bit, the moment of inertia is determined from the frequency characteristic using a test signal, and is transferred to p1498. The traversing path must first be set using parameter p5308.

p5302[0...n] Online tuning configuration / Ot config

SERVO (J_estimator, Lin), SERVO_AC (J_estimator, Lin), SERVO_I_AC (J_estimator, Lin)

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** DDS, p0180	**Func. diagram:** -
P-Group: -	**Unit group:** -	**Unit selection:** -
Not for motor type: REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0000 0000 0000 1100 bin

Description: Setting the functions for online tuning (p5300 = 2).

Bit field:

Bit	Signal name	1 signal	0 signal	FP
02	Activating the moment of inertia estimator	Yes	No	-
03	Configuring the moment of inertia estimator	Cyclic	Once	-
06	Activating the current setpoint filter adaptation	Yes	No	-
07	Activating synchronized axes	Yes	No	-
08	Moment of inertia determination from frequency response	Yes	No	-

Dependency: It is only possible to change the configuration if autotuning is not active (p5300 = 0).

Refer to: p5271, p5272, p5273, r5274, p5275, p5300

Caution: Please note the general conditions for the moment of inertia estimator, online tuning as well as adaptive resonance filter in the following reference:

SINAMICS S120 Function Manual Drive Functions

Note: For bit 02:

When the bit is set, the mass is determined while traversing (moment of inertia estimator). If this bit is not set, then the load mass must be manually set using parameter p1498.

For bit 03:

If p5302.3 = 0, "Once" applies:

After having successfully determined the load mass (p1498), the moment of inertia estimator is deactivated.

If p5302.3 = 1, "Cyclic" applies:

The mass is continually determined and the controller parameters adapted. After the mass has been successfully determined (r1407.26 = 1), we recommend that the parameters are saved in a non-volatile fashion. As a consequence, the controllers do not have to restabilize after the next switch on.

For bit 06:

The adaptation of a current setpoint filter can be set here (see p5280 - p5285).

This adaptation may be necessary if a mechanical resonance frequency changes in operation. It can also be used to dampen a fixed resonance frequency. Once the control loop has stabilized, this bit should be deactivated and the determined parameters saved in a non-volatile fashion.

For bit 07:

When the function is activated, these axes are adapted to the dynamic response set in p5275. This is necessary for interpolating axes. The time in p5275 should be set according to the axis with the lowest dynamic response.

Data type: Unsigned16	**Dyn. index:** DDS, p0180	**Func. diagram:** -
P-Group: -	**Unit group:** -	**Unit selection:** -
Not for motor type: REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the status of the auto tuning functions performed - "Online tuning" and "One Button Tuning".

The functions can be activated via p5300.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Proportional gain Kp set	Yes	No	-
01	Current setpoint filter set	Yes	No	-
02	Moment of inertia estimation carried out	Yes	No	-
04	Load vibration detection performed	Yes	No	-
05	Detected load oscillation set	Yes	No	-
06	Current setpoint filter adaptation active	Yes	No	-
12	Online tuning active	Yes	No	-
13	One Button Tuning successfully completed	Yes	No	-
14	Controller parameters reset due to fault	Yes	No	-

Dependency: Refer to: p5300, p5301, p5302

Note: For bit 00 = 1: The speed controller gain was set using One Button Tuning.

For bit 01 = 1: The current setpoint filter was set using One Button Tuning

For bit 02 = 1: The moment of inertia was determined.

For bit 04 = 1: Load oscillation detection was performed using One Button Tuning

For bit 05 = 1: Detected load oscillation suppression was set using One Button Tuning.

For bit 06 = 1: Adaptive resonance filters of the online tuning are active.

For bit 12 = 1: Online tuning is active and modifies the controller.

p5307[0...n] Activate One Button Tuning test signal / Act OBT test sig

SERVO (J_estimator, Lin), SERVO_AC (J_estimator, Lin), SERVO_I_AC (J_estimator, Lin)

P-Group: -	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0000 bin

Description: Setting to activate the test signal.

For bit 01:

As setpoint speed, a triangular signal is entered, alternating in the positive and negative directions. Distance p5308 and duration p5309 are kept.

This function is used for One Button Tuning p5300 = 1.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
01	Triangular test signal	ON	OFF	-

Dependency: Refer to: p5308, p5309

Note: For bit 01:

This test signal can only be activated for p5308 > 0 and p5309 > 0.

Speed control with encoder is required to activate the test signal.

p5308[0...n] One Button Tuning test signal distance limiting / OBT test sig lim

SERVO (J_estimator, Lin), SERVO_AC (J_estimator, Lin), SERVO_I_AC (J_estimator, Lin)

Can be changed: T	**Calculated:** -	**Access level:** 3

Min	**Max**	**Factory setting**
0 [ms]	5000 [ms]	2000 [ms]

Description: Sets the test signal sequence duration (several acceleration operations).

This function is used for One Button Tuning p5300=1 to identify the total moment of inertia of the drive train.

Dependency: Refer to: p5307

Refer to: F07093

p5310[0...n] Moment of inertia precontrol configuration / J_est config

VECTOR (J_estimator), VECTOR_AC (J_estimator), VECTOR_I_AC (J_estimator)

Can be changed: C2(3), U, T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** DDS, p0180	**Func. diagram:** -
P-Group: Motor	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0000 bin

Description: Configuration of the moment of inertia precontrol when the moment of inertia estimator is active.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Activating calculations	Yes	No	-
01	Activating the moment of inertia precontrol	Yes	No	-

Dependency: The function module "Moment of inertia estimator" (r0108.10) must be activated for the "Moment of inertia precontrol" function.

Refer to: r5311, p5312, p5313, p5314, p5315

Note: Possible bit combinations:

Bit 1, 0

= 0, 0 --> function not active

= 0, 1 --> cyclic calculation of the coefficients without moment of inertia precontrol (commissioning)

= 1, 0 --> moment of inertia precontrol activated (without cyclic calculation of the coefficients)

= 1, 1 --> moment of inertia precontrol activated (with cyclic calculation of the coefficients)

For bit 00:

Calculation for the constant and linear coefficients of the moment of inertia precontrol is activated. The results are written to parameters (p5312, p5313, p5314, p5315).

For bit 01:

The moment of inertia precontrol is activated.

The moment of inertia is calculated from the currently measured load torque and the saved coefficients (p5312, p5313, p5314, p5315).

r5311[0...n] Moment of inertia precontrol status word / J_prectrl ZSW

VECTOR (J_estimator), VECTOR_AC (J_estimator), VECTOR_I_AC (J_estimator)

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** DDS, p0180	**Func. diagram:** -
P-Group: Motor	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Displays the status word for the moment of inertia precontrol.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	New measuring points are available	Yes	No	-
01	New parameters being calculated	Yes	No	-
02	Moment of inertia precontrol active	Yes	No	-
03	Calculation of positive coefficients completed	Yes	No	-
04	Calculation of negative coefficients completed	Yes	No	-
05	Results are being written to parameter	Yes	No	-

Dependency: The function module "Moment of inertia estimator" (r0108.10) must be activated for the "Moment of inertia precontrol" function.

0	1	0

Description: A noise signal is injected into the drive to determine the moment of inertia.

Activation of the moment of inertia determination

For p5320 = 1:

The moment of inertia determination is started.

Value:
0: Inactive
1: Start moment of inertia measurement

Dependency: The prerequisite for the "Moment of inertia determination" function is that the "Moment of inertia estimator" function module is activated (r0108.10).

The "Moment of inertia determination" function can only be selected for the "Servo" control mode with motor encoder.

The motor must have already been commissioned so that "moment of inertia determination" functions error-free. A motor identification may be necessary beforehand (p1900 and following).

Not for motor type: REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
- [kgm²]	- [kgm²]	- [kgm²]

Description: Displays the identified moment of inertia.

Dependency: IEC drives (p0100 = 0): unit kg m^2

NEMA drives (p0100 = 1): unit lb ft^2

Refer to: p5320, r5321, p5322, p5323, p5324

p5350[0...n] Mot_temp_mod 1/3 boost factor at standstill / Standst boost_fact

SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC

Can be changed: C2(3), U, T	**Calculated:** -	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Func. diagram:** 8017
P-Group: Motor	**Unit group:** -	**Unit selection:** -
Not for motor type: ASM, SESM, REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
1.0000	2.0000	2.0000

Description: Sets the boost factor for the copper losses at standstill for motor temperature models 1 and 3.

The entered factor is active for speed n = 0 [rpm].

This factor is linearly reduced down to 1 between speeds n = 0 ... 1 [rpm].

The following values are required to calculate the boost factor:

- stall current (I_0, p0318, catalog value)
- thermal stall current (I_th0, catalog value)

The boost factor is calculated as follows:

- p5350 = (I_0 / I_th0)^2

Dependency: Refer to: p0318, p0351, p0612, p5390, p5391

Refer to: F07011, A07012, F07013, A07014

Notice: When selecting a catalog motor (p0301), this parameter is automatically pre-assigned and is write protected. Information in p0300 should be carefully observed when removing write protection.

Note: Temperature model 1 (I2t):

The following applies for firmware version < 4.7 SP6 or p0612.8 = 0:

- parameter p5350 is not active. Internally, a fixed boost factor of 1.333 is used as basis for the calculation.

The following applies from firmware version 4.7 SP6 and p0612.8 = 1:

- parameter p5350 becomes active as described above.

r5389.0...8 CO/BO: Mot_temp status word faults/alarms / Mot_temp ZSW F/A

SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC

Can be changed: -	**Calculated:** -	**Access level:** 2
Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** 8016
P-Group: Displays, signals	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Display and BICO output for faults and alarms of the motor temperature monitoring.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Motor temperature measurement fault active	Yes	No	-
01	Motor temperature model fault active	Yes	No	-
02	Encoder temperature measurement fault active	Yes	No	-
04	Motor temperature measurement alarm active	Yes	No	-
05	Motor temperature measurement alarm active	Yes	No	-
08	Current reduction active	Yes	No	-

Dependency: Refer to: r0034, p0612, r0632

Refer to: F07011, A07012, A07910

Note: For bit 00, 04:

The motor temperature is measured using a temperature sensor (p0600, p0601). When the bit is set, a high temperature is identified, and a corresponding signal is additionally output.

For bit 01, 05:

The motor temperature is monitored based on a temperature model (p0612). When the bit is set, a high temperature is identified, and a corresponding signal is additionally output.

For bit 02:

The encoder temperature is measured using a temperature sensor. When the bit is set, a high temperature is identified, and a corresponding signal is additionally output.

For bit 08:

When reaching the motor temperature alarm threshold, reduction of the maximum current is set as response (p0610 = 1). When the bit is set, reduction of the maximum current is active.

p5390[0...n] Mot_temp_mod 1/3 alarm threshold / A thresh

SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC

Can be changed: C2(3), U, T	**Calculated:** -	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Func. diagram:** 8017
P-Group: Motor	**Unit group:** 21_1	**Unit selection:** p0505
Not for motor type: ASM, SESM, REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.0 [°C]	200.0 [°C]	110.0 [°C]

Description: Sets the alarm threshold for monitoring the motor temperature for motor temperature models 1 and 3.

The stator winding temperature (r0632) is used to initiate the signal.

The following applies for temperature model 1 (I2t):

- only effective from firmware version 4.7 SP6 and p0612.8 = 1.
- Alarm A07012 is output after the alarm threshold is exceeded.
- when commissioning a catalog motor for the first time, the threshold value is copied from p0605 to p5390.

The following applies for temperature model 3:

- after the alarm threshold is exceeded, alarm A07012 is output and a calculated delay time (t = p5371/p5381) is started.
- if the delay time has expired and the alarm threshold has, in the meantime, not been fallen below, then fault F07011 is output.

Dependency: Refer to: r0034, p0605, p0612, r0632, p5391

Refer to: F07011, A07012, F07013, A07014

Notice: When selecting a catalog motor (p0301), this parameter is automatically pre-assigned and is write protected. Information in p0300 should be carefully observed when removing write protection.

Note: The hysteresis is 2 K.

p5391[0...n] Mot_temp_mod 1/3 fault threshold / F thresh

SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC

Can be changed: C2(3), U, T	**Calculated:** -	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Func. diagram:** 8017
P-Group: Motor	**Unit group:** 21_1	**Unit selection:** p0505
Not for motor type: ASM, SESM, REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.0 [°C]	200.0 [°C]	120.0 [°C]

Description: Sets the fault threshold for monitoring the motor temperature for motor temperature models 1 and 3.

Fault F07011 is output after the fault threshold is exceeded.

The stator winding temperature (r0632) is used to initiate the signal.

The following applies for temperature model 1 (I2t):

- only effective from firmware version 4.7 SP6 and p0612.8 = 1.
- when commissioning a catalog motor for the first time, the threshold value is copied from p0615 to p5391.

Dependency: Refer to: r0034, p0612, p0615, r0632, p5390

Refer to: F07011, F07013, A07014

Notice: When selecting a catalog motor (p0301), this parameter is automatically pre-assigned and is write protected. Information in p0300 should be carefully observed when removing write protection.

Note: The hysteresis is 2 K.

r5397 Mot_temp_mod 1/3 ambient temperature image p0613 / AmbTmp image p613

SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC

Can be changed: -	**Calculated:** -	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 8019
P-Group: Displays, signals	**Unit group:** 21_1	**Unit selection:** p0505
Not for motor type: ASM, SESM, REL	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
- [°C]	- [°C]	- [°C]

Description: Displays the ambient temperature for motor temperature models 1 and 3.
This value is used to calculate the utilization display (p0034).
The parameter value is an image of p0613.

Dependency: Refer to: r0034

Note: The following applies for firmware version < 4.7 SP6:
Users cannot see parameter p0613 (only Siemens internal).

r5398[0...n] Mot_temp_mod 1/3 alarm threshold image p5390 / A thr image p5390

SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC

Min	**Max**	**Factory setting**
- [°C]	- [°C]	- [°C]

Description: Sets the fault threshold for monitoring the motor temperature for motor temperature models 1 and 3.
Fault F07011 is output after the fault threshold is exceeded.
The parameter value is an image of p5391.

Dependency: Refer to: p5391
Refer to: F07011, A07012, F07013, A07014

Note: The following applies for firmware version < 4.7 SP6:
Users cannot see parameter p5391 (only Siemens internal).

p5400 Grid droop control configuration / Grid droop ctr cfg

A_INF (Line droop ctrl), R_INF (Line droop ctrl)

Can be changed: T	**Calculated:** -	**Access level:** 4
Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** -
P-Group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0000 bin

Description: Sets the configuration for the line droop control.

Recommendation: We recommend that the factory setting setting is kept.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Q-U droop	Yes	No	-
01	dq transformation with grid droop angle	Yes	No	-

Dependency: Refer to: r5412, r5421, r5422, r5449

Note: For bit 00:

For p5400.0 = 0, the reactive current (r5421) is used as input variable for the voltage droop (r5420).

Using this reactive current voltage droop, also in the case of line/grid voltage dips, a stable operating point for common operation with additional power generators in the island grid is obtained. This is also true if these generating units employ a reactive power voltage droop.

For p5400.0 = 1, the reactive power (r5422) is used as input variable for the voltage droop (r5420), therefore implementing a reactive power-voltage droop functionality.

For bit 01:

For p5400.1 = 0, the line angle from the transformer model and PLL (r0094) are used to calculate the active current and reactive current (r5421, r5449).

For p5400.1 = 1, the grid supply angle from the grid supply droop (r5412) is used to calculate the active and reactive current (r5421, r5449).

p5401[0...1] BI: Line droop control activation / Line drp act

A_INF (Line droop ctrl), R_INF (Line droop ctrl)

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32 / Binary	**Dyn. index:** -	**Func. diagram:** 7982
P-Group: Commands	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	[0] 0 [1] 1

Description: For index [0]:

Sets the signal source to activate line droop control for the infeed.

BI: p5401[0] = 1 signal:

Activation of line droop control and deactivation of closed-loop DC link voltage control/closed-loop current control.

BI: p5401[0] = 0 signal:

Activation of closed-loop DC link voltage control/closed-loop current control and deactivation of line droop control.

For index [1]:

Setting the signal source to activate the line droop setpoints (p5405, p5406, p5415, p5416).

BI: p5401[1] = 1 signal:

Activates the setpoints.

BI: p5401[1] = 0 signal:

Deactivates the setpoints.

Index: [0] = Line regulation
[1] = Droop setpoints

Dependency: For p5401[0], the following applies:

The Smart Mode must be deactivated (p3400.0 = 0) to set a signal source.

Refer to: r5402

Notice: Line droop control can only be activated if the power units have a gating unit with current limitation control (r0192.19 = 1 or r0192.30 = 1).

We urgently recommend at least one measure to dampen power oscillations (p5413, p5476) if, in an island grid, several generating sources are simultaneously active – and power is exchanged via the frequency droop (p5405).

Note: For index [0]:

So that closed-loop DC link voltage control is activated by the VECTOR drive object's technology controller (due to closed-loop DC link voltage control for the infeed being deactivated) the following BICO interconnection must be set:

BI: p3513 (VECTOR) = r5402.0 (A_INF)

For index [1]:

When the setpoints are deactivated, the smoothed actual values of these variables are used for the no-load values of frequency and voltage. As a consequence, the average power is controlled so that it approaches zero. However, when the line frequency or line voltage changes, brief peak powers can occur according to the current limits that have been set (r5479).

As the power is controlled to zero, in island grids continuous operation is only possible with p5401[1] = 0 if the grid is supplied by other generating units. Otherwise, line frequency and line voltage decreases to the shutdown limits. However, brief exceptions with the appropriate low frequency and amplitude deviations are possible and make sense (e.g. for switchover transitions in hot standby applications).

r5402.0...6 CO/BO: Line droop control status word / Line drp ZSW

A_INF (Line droop ctrl), R_INF (Line droop ctrl)

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned16	**Dyn. index:** -	**Func. diagram:** -
P-Group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	-

Description: Display and BICO output for the status word of the grid droop control of the infeed unit.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Line droop control not active	Yes	No	-
01	Line droop control active	Yes	No	-
02	Line droop control in single mode	Yes	No	-
03	Current limitation control active	Yes	No	7986
04	Operating state line short circuit active	Yes	No	-
05	Wobbulation modulation type active	Yes	No	-
06	Line droop f-U setpoints active	Yes	No	-

Note: For bit 00, 01:

The line droop control is activated via binector input p5401[0].

The grid and DC link parameter identification must be deselected (p3410 = 0) in order to do this.

For bit 02:

The operating mode of the current hysteresis controller is specified via binector input p5451.

For bit 04:

The status word of the sequence control is displayed in r5452.

For bit 05:

The pulse frequency wobbulation is activated via p1810.2 = 1, and the wobbulation amplitude p1811 is enabled via p5456[0...2].4 = 0.

For bit 06:

The no-load setpoints for frequency and voltage are activated using binector input p5401[1].

p5403[0...1] CI: Line droop control current signal source / Line drp I s_src

A_INF (Line droop ctrl), R_INF (Line droop ctrl)

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32 / FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 7982
P-Group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** p2002	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	[0] 3467[0] [1] 3467[1]

Description: Sets the signal source for the current to be regulated in alpha/beta coordinates.

Index: [0] = Alpha
[1] = Beta

Dependency: Refer to: p5404

Note: The following BICO interconnections are recommended:

- Droop control for current/voltage at the line filter: BI: p5403 = r3467 (BI: p5404 = r3468 must be set)
- Droop control for current/voltage at the line transformer: BI: p5403 = r5497 (BI: p5404 = r5488 or r5498 must be set)

p5404[0...1] CI: Line droop control voltage signal source / Line drp U s_src

A_INF (Line droop ctrl), R_INF (Line droop ctrl)

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32 / FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 7982
P-Group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** p2001	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	[0] 3468[0] [1] 3468[1]

Description: Sets the signal source for the voltage to be regulated in alpha/beta coordinates.

Index: [0] = Alpha
[1] = Beta

Note: The following BICO interconnections are recommended:

- Droop control for current/voltage at the line filter: BI: p5404 = r3468 (BI: p5403 = r3467 must be set)
- Droop control for current/voltage at the line transformer: BI: p5404 = r5488 or r5498 (BI: p5403 = r5497 must be set)

p5405 Line droop control frequency droop no-load frequency / Line drp f_no-ld

A_INF (Line droop ctrl), R_INF (Line droop ctrl)

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 7982
P-Group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** PERCENT	**Expert list:** 1
Min	**Max**	**Factory setting**
30.00 [%]	300.00 [%]	100.00 [%]

Description: Sets the no-load frequency (as a % of p0211) for the line droop control active power frequency droop.

Droop formula (without smoothing):

r5410 = (p5405 + p5406 + p5407 x r5411[0] / r0206) x p0211

Dependency: Refer to: p5409

Caution: We urgently recommended that at least one measure is activated to dampen power oscillations (p5413, p5476).

Note: The droop characteristic input variable is the active power r5411[0] at the selected connection point (p5403, p5404).

The output frequency calculated using the above formula is filtered in accordance with the parameterized smoothing time (p5409).

The smoothed output frequency is displayed in r5410.

p5406[0...1] CI: Line droop control frequency droop supplementary setpoint / L drp f_suppl_setp

A_INF (Line droop ctrl, Line transf), R_INF (Line droop ctrl, Line transf)

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32 / FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 7982
P-Group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** PERCENT	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	[0] 0 [1] 5582[0]

Description: Sets the signal source for the frequency droop supplementary setpoint (as a % of p0211).

Index: [0] = Supplementary setpoint is smoothed
[1] = Supplementary setpoint direct

Dependency: Refer to: p5405

Notice: For index [1]:

Setpoint steps without smoothing can result in significant equalization operations in the line supply and the overload of the inverter and the line components.

Note: For index [0]:

The setpoint signals are smoothed using a PT1 filter (p5409).

For index [1]:

If the signals for the unsmoothed setpoints are precisely reset to 0 (e.g. for p5483[3] = 1), then by internally adapting the smoothed setpoint state, an undesirable step-like frequency change is avoided. The signal for the smoothed setpoint should be adapted using a corresponding frequency change, if the frequency is to be kept constant.

p5407 Line droop control frequency droop gradient / Line drp f grad

A_INF (Line droop ctrl), R_INF (Line droop ctrl)

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 7982
P-Group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.00 [%]	100.00 [%]	5.00 [%]

Description: Sets the gradient of the frequency droop (as a % of the rated frequency p0211 at the rated power r0206).

Dependency: Refer to: p5405

p5408 CI: Line droop control frequency droop gradient dynamic / Line drp f grad dy

A_INF (Line droop ctrl), R_INF (Line droop ctrl)

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32 / FloatingPoint32	**Dyn. index:** -	**Func. diagram:** -
P-Group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** PERCENT	**Expert list:** 1
Min	**Max**	**Factory setting**
-	-	0

Description: Sets the signal source for the additional gradient of the frequency characteristic.

p5409 Line droop control frequency droop smoothing time / Line drp f t_sm

A_INF (Line droop ctrl), R_INF (Line droop ctrl)

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 7982
P-Group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min	**Max**	**Factory setting**
0.00 [ms]	10000.00 [ms]	150.00 [ms]

Description: Sets the smoothing time for the output frequency of the active power frequency droop (r5410).

Dependency: Refer to: p5405

Note: When the load changes, mechanical energy generation units induce a delayed change in frequency on account of their inertia. The converter tries to emulate this response with the assistance of the smoothing time.

For the line to remain stable, all the energy generation units in a separate network have to respond in a similar manner during operation.

r5410 CO: Line droop control frequency droop output / Line drp f outp

A_INF (Line droop ctrl), R_INF (Line droop ctrl)

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 7982
P-Group: Displays, signals	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** p2000	**Expert list:** 1
Min	**Max**	**Factory setting**
- [Hz]	- [Hz]	- [Hz]

Description: Displays the smoothed output frequency of the active power frequency droop.

Droop formula (without smoothing):

r5410 = (p5405 + p5406 + p5407 * r5411[0] / r0206) * p0211

Dependency: Refer to: p5405

r5411[0...1] CO: Line droop control frequency droop active power / Line drp f P_act

A_INF (Line droop ctrl), R_INF (Line droop ctrl)

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 7982
P-Group: Displays, signals	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** r2004	**Expert list:** 1
Min	**Max**	**Factory setting**
- [kW]	- [kW]	- [kW]

Description: Displays the input active power of the active power frequency droop.

The active power is calculated for the currents and voltages defined with connector inputs p5403 and p5404.

Index: [0] = Unsmoothed
[1] = Smoothed

Dependency: Refer to: p5409

Note: For index [1]:

The value is smoothed using a PT1 filter (smoothing time: p0045).

r5412 CO: Line droop control line angle / Line drp angle

A_INF (Line droop ctrl), R_INF (Line droop ctrl)

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Func. diagram:** 7982
P-Group: Displays, signals	**Unit group:** -	**Unit selection:** -
